

300-745 Preparation Materials - 300-745 Guide Torrent: Designing Cisco Security Infrastructure - 300-745 Real Test

BTW, DOWNLOAD part of Lead2PassExam 300-745 dumps from Cloud Storage: https://drive.google.com/open?id=1zHwBuJipWkBwPNCOVwOZH-c2TYNt_sEH

Our Cisco 300-745 demo products hold the demonstration for our actual products, demos are offered at no cost only for raising your confidence level. Procure the quality of our product in advance, unsighted featured becomes reveal with our 300-745 Demo products. Free Private Cloud Monitoring and Operations with demos respond to all kind of worries that customers have in their mind while going for actual purchase.

Lead2PassExam is a trusted platform that is committed to helping Cisco 300-745 exam candidates in exam preparation. The Cisco 300-745 exam questions are real and updated and will repeat in the upcoming Cisco 300-745 Exam Dumps. By practicing again and again you will become an expert to solve all the Cisco 300-745 exam questions completely and before the exam time.

Updated 300-745 Test Cram | Latest 300-745 Test Cost

Try to have a positive mindset, keep your mind focused on what you have to do. Self-discipline is important if you want to become successful. Learn to reject temptations. As old saying goes, no pains no gains. Learning our 300-745 study materials will help you calm down. What you have learned will finally pay off. It is never too late to learn. You still have the chance to obtain the 300-745 certificate. What is more, many people have harvest happiness and success after passing the 300-745 exam. Then you are available for various high salary jobs.

Cisco Designing Cisco Security Infrastructure Sample Questions (Q67-Q72):

NEW QUESTION # 67

Employees in a healthcare organization could not access their devices when they returned to work after the weekend. The security team discovered that a threat actor had encrypted the devices. Which security solution would mitigate the risk in future?

- A. data loss prevention
- B. password policy enforcement
- C. network configuration management
- D. endpoint detection and response

Answer: D

Explanation:

Endpoint Detection and Response (EDR) provides continuous monitoring, detection, and automated response to suspicious activity on devices. It can identify and stop ransomware attacks before encryption occurs, mitigating the risk of device lockouts in the future.

NEW QUESTION # 68

Which Cisco product provides automated incident response workflows integrated with SIEM and SOAR platforms?

- A. Cisco DNA Center
- B. Cisco Catalyst
- C. Cisco SecureX
- D. Cisco AnyConnect

Answer: C

Explanation:

Cisco SecureX integrates multiple security tools with SIEM and SOAR platforms and provides automated incident response workflows to speed up detection, investigation, and remediation.

NEW QUESTION # 69

An IT company operates an application in a SaaS model. The administrative tasks, such as customer onboarding, within the application must be restricted to users who are on the corporate network where admins can access those functions via a web browser or a smartphone application. Which application technology must be used to provide granular control based on function?

- A. security group
- B. RBAC
- C. VPC
- D. Service Mesh

Answer: B

Explanation:

The requirement to restrict administrative tasks like "customer onboarding" to specific users based on their job function is a classic use case for Role-Based Access Control (RBAC). In the context of application security design, RBAC is the mechanism that maps a user's identity to a specific set of permissions within the application.

According to Cisco Security Infrastructure principles, RBAC ensures the principle of least privilege by ensuring that an "Admin" role has access to onboarding functions, while a "Support" or "Standard User" role does not. This control is independent of the network layer and is enforced at the application or identity provider level. While a VPC (Option A) or Security Groups (Option C) provide network-layer isolation and can ensure the user is on the corporate network (by filtering IP ranges), they cannot distinguish between different functions or actions performed within the application once the connection is established. A Service Mesh (Option D) is used for microservices communication and can provide some authorization, but RBAC is the primary architectural approach for defining "who can do what" within an application interface.

Implementing RBAC allows the SaaS provider to secure sensitive administrative workflows, ensuring that only authorized personnel can modify customer data or system configurations.

NEW QUESTION # 70

A financial company uses a remote access solution that directs all traffic over a secure tunnel. The company recently received some large ISP bills from the headquarter location. According to traffic analysis during the investigation, most of the network traffic was due to employees spending a lot of time on video conferences provided by a SaaS collaboration company. What must the company modify to reduce the cost without negatively impacting security or employee experience?

- A. Block the video conferencing app when connected on VPN.
- B. Reduce the video resolution size permitted within the SaaS application.
- C. Split-exclude the video SaaS application from the VPN.
- D. Suggest users to disconnect from the VPN when on video calls.

Answer: C

Explanation:

In a Full Tunnel VPN configuration, all traffic from the remote client is sent to the VPN headend before being routed to its final destination. This often results in "hairpinning," where high-bandwidth latency-sensitive traffic, such as video conferencing, travels to the corporate data center only to be sent back out to the internet, doubling the bandwidth consumption at the headquarter's ISP link. To resolve this, the company should implement Split-Exclude tunneling. This configuration allows the VPN administrator to define specific applications or IP ranges—in this case, the SaaS video platform—that should bypass the secure tunnel and go directly to the internet via the user's local ISP. This significantly reduces the load on the corporate headquarter's internet connection and often improves the "employee experience" by reducing latency for the video stream. Unlike Option A, which degrades quality, or Option C/D, which disrupts workflow and security posture, split-excluding trusted SaaS traffic maintains a high security standard for internal resources while optimizing infrastructure costs. This aligns with the Cisco SDSI objective of designing scalable and cost-effective remote access solutions using Cisco Secure Client (AnyConnect) and Firepower Threat Defense (FTD) policies.

NEW QUESTION # 71

A company hosted multiple applications in the Kubernetes environment, using the naming app01, app02, and so on. An app01 user could access app02 data because no security measures are implemented. The administrator decided to place each application within a separate namespace and ensure that the namespaces are completely isolated and cannot communicate with each other. Which solution must be used to accomplish the task?

- A. NetworkPolicy
- B. HTTPRoute
- C. Gateway
- D. RoleBinding

Answer: A

Explanation:

In a Kubernetes environment, Namespaces provide a logical partition for resources but do not, by default, provide network isolation. To prevent "app01" from communicating with "app02," a NetworkPolicy must be implemented. NetworkPolicies act as the Layer 3/4 distributed firewall for the cluster, allowing administrators to define explicit rules for ingress and egress traffic between pods and namespaces.

To achieve complete isolation, a common design pattern is to implement a "deny-all" default policy for each namespace and then explicitly allow only necessary traffic. This aligns with the Cisco SAFE architectural principle of micro-segmentation.

While RoleBinding (Option B) manages permissions for the Kubernetes API (who can create or delete pods), it does not control the actual network traffic between those pods. HTTPRoute (Option A) and Gateway (Option D) are components of the Kubernetes Gateway API used for managing external traffic routing and load balancing, rather than internal pod-to-pod isolation. By deploying NetworkPolicies, the administrator ensures that the "blast radius" of a compromised application is contained within its own namespace, fulfilling a core objective of securing cloud-native application infrastructure.

NEW QUESTION # 72

.....

We have three formats of study materials for your leaning as convenient as possible. Our 300-745 question torrent can simulate the real operation test environment to help you pass this test. You just need to choose suitable version of our 300-745 guide question you want, fill right email then pay by credit card. It only needs several minutes later that you will receive products via email. After your purchase, 7*24*365 Day Online Intimate Service of 300-745 question torrent is waiting for you. We believe that you don't encounter failures anytime you want to learn our 300-745 guide torrent.
