Practice Information-Technology-Management Test & Information-Technology-Management Valid Test Experience

Thus you can study WGU Information-Technology-Management on your preferred smart device such as your smartphone or in hard copy format. Once downloaded from the website, you can easily study from the WGU Information-Technology-Management Exam Questions compiled by our highly experienced professionals as directed by the WGU exam syllabus.

WGU Information Technology Management QGC1 Sample Questions (Q142-Q147):

NEW QUESTION # 142

Which business layer determines which products or services are being sold and to whom?

- A. Operating
- B. Corporate
- C. Strategy
- D. Systems

Answer: C

NEW QUESTION # 143

Which step involves validating a user's identity before allowing access to a system or resource?

- A. Accounting
- B. Confidentiality
- C. Authorization
- **D. Authentication**

Answer: D

Explanation:

Authentication is the process of validating a user's identity before granting access to a system or resource.

Examples include passwords, biometrics, and multifactor authentication.

Option A (Confidentiality): Ensures data is only accessible to authorized users, not the identity check itself.

Option B (Authorization): Occurs after authentication, determining what resources a verified user may access.

Option C (Accounting): Tracks user activity for auditing purposes.

Thus, the step that validates identity is Authentication.

NEW QUESTION # 144

Which pair of terms describes an add-on that purports to serve a useful function while transmitting user data and displaying pop-up boxes without the user's knowledge or permission?

- A. Hackers and viruses
- B. Ethics and cost
- C. Downtime and uptime
- **D. Adware and spyware**

Answer: D

NEW QUESTION # 145

Which software carries out a set of operations on behalf of a user with a degree of independence and employs knowledge of the user's goals?

- A. Virtual assistant
- B. Information of Everything
- **C. Autonomous agent**
- D. Ambient digital experience

Answer: C

Explanation:

* Understanding Autonomous Agents:

* An autonomous agent is a software entity capable of performing tasks on behalf of a user independently.

* It employs knowledge of the user's goals and adapts to achieve them.

* Examples of Autonomous Agents:

* Examples include shopping bots, automated trading systems, and decision-making software.

* Why Other Options Are Incorrect:

* Option A (Information of Everything): Refers to interconnected data but not software entities.

* Option B (Virtual assistant): Virtual assistants interact with users but are not fully autonomous.

* Option D (Ambient digital experience): Refers to seamless digital interaction, not task automation.

NEW QUESTION # 146

How does a colocation data center differ from an on-premises data center?

- A. It is owned and operated by the enterprise.
- B. It is located within the enterprise's physical premises.
- **C. It is managed by a third-party provider.**
- D. It uses dedicated hardware provided by the enterprise.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In a colocation data center model, the facility (building, power, cooling, physical security, and connectivity) is owned and managed by a third-party provider, while the enterprise typically installs and manages its own servers and network equipment inside that facility. The key difference from an on-premises data center is who is responsible for operating and managing the physical environment.

An on-premises data center is located at and operated by the enterprise itself, which means the organization directly manages the building infrastructure, power, cooling, physical access, and related facilities.

Option A is incorrect because using dedicated hardware provided by the enterprise can occur in both on-premises and colocation models. It does not clearly distinguish colocation from on-premises.

Option B is incorrect because being located within the enterprise's premises describes an on-premises data center, not a colocation center.

Option C is incorrect because ownership and operation by the enterprise also corresponds to an on-premises model.

Option D is correct because a colocation data center is managed by a third-party provider, who is responsible for the physical site and its supporting infrastructure while the enterprise uses that space to host its equipment.
