You can easily install Salesforce Plat-Admn-202 exam questions file on your desktop computer, laptop, tabs, and smartphone devices and start Salesforce Certified Platform App Builder (Plat-Admn-202) exam dumps preparation without wasting further time. Whereas the other two Salesforce Plat-Admn-202 Practice Test software is concerned, both are the mock Salesforce Certified Platform App Builder (Plat-Admn-202) exam that will give you a real-time Plat-Admn-202 practice exam environment for preparation.

Salesforce Plat-Admn-202 Exam Syllabus Topics:

| Topic | Details |
|---------|--|
| Topic 1 | <ul style="list-style-type: none"> • Business Logic and Process Automation: This section of the exam measures the skills of Process Automation Specialists and Salesforce Administrators and covers the key tools Salesforce provides to automate and enforce business logic. It focuses on using formula fields, roll-up summary fields, and validation rules to meet defined requirements. Candidates must also understand approval processes and know how to select the right automation tool to prevent conflicts or errors. The domain emphasizes evaluating business requirements and recommending automation solutions that maintain system stability and accuracy. |
| Topic 2 | <ul style="list-style-type: none"> • App Deployment: This section of the exam measures the skills of Release Managers and Salesforce Administrators and covers the application lifecycle from planning through deployment. It requires determining the appropriate strategy when working with different sandboxes and managing milestones during development. Candidates must know when to use change sets and how to troubleshoot deployment issues. The section also includes understanding the implications of using unmanaged versus managed packages and selecting the correct deployment plan for various business scenarios. |

| | |
|---------|---|
| Topic 3 | <ul style="list-style-type: none"> • Salesforce Fundamentals: This section of the exam measures the skills of Salesforce Administrators and Junior Salesforce Consultants and covers the essential concepts needed to understand how Salesforce works at a foundational level. It focuses on recognizing when to use declarative tools versus programmatic customization, determining when AppExchange apps extend org capabilities, and understanding key methods for managing object, record, and field access. It also evaluates your ability to choose the right sharing model based on business needs and to apply reporting tools effectively, including report types and dashboards. Additionally, the domain reviews how to optimize the mobile experience through actions and layouts, and how Chatter can be used to support collaboration. |
| Topic 4 | <ul style="list-style-type: none"> • Data Modeling and Management: This section of the exam measures the skills of Data Analysts and Salesforce Administrators and covers the core principles of designing and maintaining Salesforce data structures. It requires selecting the correct data model in various scenarios and understanding relationship types and how they influence reporting, record access, and the user interface. It also tests knowledge of field data types and the operational impact of changing them. The section includes evaluating the use of Schema Builder and understanding the considerations involved in importing and exporting data across internal and external sources. |
| Topic 5 | <ul style="list-style-type: none"> • User Interface: This section of the exam measures the skills of Salesforce UI Designers and Lightning App Builders and covers the ways in which Salesforce interfaces can be customized to improve usability. It includes understanding available options for UI customization and demonstrating when to apply custom buttons, links, and actions. The domain also distinguishes between declarative and programmatic methods for incorporating Lightning components in applications, ensuring that the right approach is selected for different user interface needs. |

With our Plat-Admn-202 Exam Practice, you will feel much relax for the advantages of high-efficiency and accurate positioning on the content and formats according to the candidates' interests and hobbies. And you will be bound to pass the exam with our Plat-Admn-202 learning guide!

Salesforce Certified Platform App Builder Sample Questions (Q117-Q122):

NEW QUESTION # 117

At Ursa Solar Major, only users with the Outer Planets profile need to see the Jupiter field on the Solar System object. How should the app builder satisfy this requirement?

- A. Classic encryption
- B. Filtered view
- C. Sharing rules
- **D. Field-level security**

Answer: D

Explanation:

To restrict visibility of the Jupiter field on the Solar System object specifically to users with the Outer Planets profile:

C . Field-level security (FLS). This allows the app builder to control access to fields based on user profiles.

Steps to set up field-level security:

Navigate to Setup → Object Manager → Solar System

Select Fields & Relationships → Jupiter field.

Click Field-Level Security.

For all profiles except Outer Planets, set the Visible option to unchecked, ensuring these users cannot see the field.

For the Outer Planets profile, check Visible to grant access.

This configuration ensures that only users with the Outer Planets profile can view the Jupiter field.

For more information on field-level security, check Salesforce's guide on Field-Level Security.

NEW QUESTION # 118

Northern Trail Outfitters (NTO) has created the custom objects Trail and Park in Salesforce to track trails and parks respectively. NTO wants to track the total number of trails a park has on the Park record without writing any code. Which two actions should an app builder take to accomplish this requirement?

- **A. Use a master-detail relationship between the Park and Trail objects.**
- B. Use a formula field on the Park record to show the total number of trails.
- **C. Use a roll-up summary field on the Park record to show the total number of Trails.**
- D. Use a lookup relationship between the Park and Trail objects.

Answer: A,C

Explanation:

To count child records (Trails) on a parent record (Park) without code, a Roll-up Summary field is required. However, Roll-up Summary fields only work when a Master-Detail relationship exists.

Why A (Roll-up Summary) is correct:Exact Extract:"A roll-up summary field calculates values from related records, such as those in a related list, on a master record. You can count the number of related records or summarize fields." - Salesforce Help | Roll-Up Summary Fields Why D (Master-Detail Relationship) is correct:Exact Extract:"Roll-up summary fields are available only for master-detail relationships." - Salesforce Help | Relationships OverviewTherefore, the Trail object must be the detail and the Park object the master to enable the roll-up count.

Why D (Master-Detail Relationship) is correct:Exact Extract:"Roll-up summary fields are available only for master-detail relationships." - Salesforce Help | Relationships OverviewTherefore, the Trail object must be the detail and the Park object the master to enable the roll-up count.

Why not B:Formula fields can't count related records.

Why not C:Lookup relationships don't support roll-up summaries natively.

NEW QUESTION # 119

Universal Containers uses a private sharing model for opportunities. This model CANNOT be changed due to a regional structure. A new sales operations team has been created. This team needs to perform analysis on Opportunity data, all should have read and write access to all Opportunities.

What are two recommended solutions for the app builder to give the users appropriate access? Choose 2 answers

- **A. Create a criteria-based sharing rule to all opportunities with the sales operations public group.**
- B. Create a criteria-based sharing rule to share all opportunities with the sales operations private group
- C. Add a manual share for all opportunities with each user on the sales operations team.
- **D. Add a permission set with 'View All' and 'Modify All' opportunity permissions enabled.**

Answer: A,D

Explanation:

The two recommended solutions for the app builder to give the users appropriate access are creating a criteria based sharing rule to all opportunities with the sales operations public group and adding a permission set with 'View All' and 'Modify All' opportunity permissions enabled. A criteria based sharing rule can grant read and write access to all opportunities that meet certain criteria to a specified group of users. A permission set can grant additional object-level permissions to users without changing their profiles.

Option B is incorrect because adding a manual share for all opportunities with each user on the sales operations team is not scalable or maintainable. Option D is incorrect because creating a criteria-based sharing rule to share all opportunities with the sales operations private group is redundant, as private groups are used to manually share records with individual users or other groups.

NEW QUESTION # 120

At Ursa Major Solar there is a requirement for a new field called Planet Details on the Planet object where users can write detailed descriptions that can include pictures and links.

What field type should the app builder utilize to fulfill this requirement?

- A. Long Text Area
- B. Multi-Select Picklist
- C. URL
- **D. Rich Text Area**

Answer: D

Explanation:

Ursa Major Solar requires a new field called Planet Details on the Planet object, where users can write detailed descriptions that can include pictures and links. The Rich Text Area field type is the best fit for this requirement.

Option B (Rich Text Area): A Rich Text Area field allows users to enter text with formatting options such as bold, italics, bullets, and numbering. Additionally, it supports inserting images and hyperlinks, which matches the requirement of including pictures and links in the description.

Rich Text Area Fields

Option A (Long Text Area): A Long Text Area field allows for lengthy text input but does not support formatting or embedding of images and links, which are necessary in this case.

Option C (Multi-Select Picklist): A Multi-Select Picklist allows users to select multiple values from a list but is not suitable for detailed descriptions or embedding images and links.

Option D (URL): A URL field is used to store and display a link but does not support text input or embedding images.

In summary, the Rich Text Area field type should be used because it allows formatted text, images, and links, which are required for the Planet Details field.

NEW QUESTION # 121

Which three standard component types are available in the Lightning App Builder?

Choose 3 answers

- **A. Rich text**
- B. Plain text
- **C. Recent items**
- **D. Report details**
- E. Filter list

Answer: A,C,D

Explanation:

In the Lightning App Builder, the following standard components can be used to enhance the functionality of Lightning pages:

B. Rich text: Allows the inclusion of formatted text, links, and images on a page.

D. Report details: Enables embedding of specific report details directly on a page.

E. Recent items: Displays a list of recently accessed items relevant to the user.

Steps to add these components:

Open the Lightning App Builder via Setup → Edit Page or when creating a new Lightning page.

Drag and drop the Rich text, Report details, and Recent items components from the standard components section onto the page layout.

Configure each component as needed (e.g., selecting a specific report for the Report details component).

For more on using these components, refer to Salesforce's guide on Standard Lightning Components.
