## Data-Architect Valid Test Blueprint & Exam Data-Architect Bible

The Salesforce Data-Architect certification brings multiple career benefits. Reputed firms happily hire you for well-paid jobs when you earn the Salesforce Certified Data Architect. If you are already an employee of a tech company, you get promotions and salary hikes upon getting the Data-Architect credential. All these career benefits come when you crack the Salesforce Data-Architect certification examination. To pass the Data-Architect test, you need to prepare well from updated practice material such as real Salesforce Data-Architect Exam Questions.

## Salesforce Certified Data Architect Sample Questions (Q17-Q22):

### NEW QUESTION # 17

NTO processes orders from its website via an order management system (OMS). The OMS stores over 2 million historical records and is currently not integrated with SF. The Sales team at NTO using Sales cloud and would like visibility into related customer orders yet they do not want to persist millions of records directly in Salesforce. NTO has asked the data architect to evaluate SF connect and the concept of data verification. Which 3 considerations are needed prior to a SF Connect implementation?

Choose 3 answers:

- A. Identify the external tables to sync into external objects
- B. Create a 2nd system Admin user for authentication to the external source.
- C. Develop an object relationship strategy.
- D. Assess whether the external data source is reachable via an ODATA endpoint.
- E. Configure a middleware tool to poll external table data

**Answer: A,C,D**

Explanation:

The three considerations needed prior to a SF Connect implementation are to develop an object relationship strategy, identify the external tables to sync into external objects, and assess whether the external data source is reachable via an ODATA endpoint. SF Connect is a feature that allows integrating external data sources with Salesforce using external objects. External objects are similar to custom objects, but they store metadata only and not data. They enable on-demand access to external data via standard Salesforce APIs and user interfaces. To implement SF Connect, a data architect needs to consider how the external objects will relate to other objects in Salesforce, which external tables will be exposed as external objects, and whether the external data source supports ODATA protocol for data access.

#### NEW QUESTION # 18

Universal Containers (UC) wants to ensure their data on 100,000 Accounts pertaining mostly to US-based companies is enriched and cleansed on an ongoing basis. UC is looking for a solution that allows easy monitoring of key data quality metrics. What should be the recommended solution to meet this requirement?

- A. Use declarative approach by installing and configuring Data.com Prospector to monitor Account data quality.
- B. Implement Batch Apex that calls out a third-party data quality API in order to monitor Account data quality.
- C. Implement an Apex Trigger on Account that queries a third-party data quality API to monitor Account data quality.
- **D. Use a declarative approach by installing and configuring Data.com Clean to monitor Account data quality.**

**Answer: D**

Explanation:

Using a declarative approach by installing and configuring Data.com Clean to monitor Account data quality can help UC meet their requirement. Data.com Clean can enrich and cleanse data on an ongoing basis by comparing Salesforce records with Data.com records and providing suggestions for updates. Data.com Clean can also provide dashboards and reports to monitor key data quality metrics such as match rate, field fill rate, and record completeness

#### NEW QUESTION # 19

Universal Containers (UC) provides shipping services to its customers. They use Opportunities to track customer shipments. At any given time, shipping status can be one of the 10 values. UC has 200,000 Opportunity records. When creating a new field to track shipping status on opportunity, what should the architect do to improve data quality and avoid data skew?

- A. Create a Master -Detail to custom object ShippingStatus c.
- B. Create a text field and make it an external ID.
- C. Create a Lookup to custom object ShippingStatus c.
- **D. Create a picklist field, values sorted alphabetically.**

**Answer: D**

#### NEW QUESTION # 20

Universal Containers (UC) has a multi-level master-detail relationship for opportunities, a custom opportunity line item object, and a custom discount request. UC has opportunity as master and custom line item object as detail in master-detail relationship. UC also has a custom line item object as master and a custom discount request object as detail in another master-detail relationship. UC has a requirement to show all sums of discounts across line items at an opportunity level. What is the recommended solution to address these requirements?

- A. Update the master-detail relationships to lookup relationships in order to allow the discount amount to roll up.
- **B. Roll-up discount request amount at the line-item-level and line-item-level summary discount at the opportunity level.**
- C. Use roll-up for the line-item-level summary and a trigger for the opportunity amount summary, as only one level roll-up is allowed.
- D. Remove the master-detail relationships and rely completely on workflow/triggers to summarize the discount amount.

**Answer: B**

Explanation:

The recommended solution to address the requirements of Universal Containers (UC) is to roll-up discount request amount at the line-item-level and line-item-level summary discount at the opportunity level. This solution would allow UC to show all sums of discounts across line items at an opportunity level using standard roll-up summary fields. Since UC has a multi-level master-detail relationship for opportunities, a custom opportunity line item object, and a custom discount request object, they can use two levels of

roll-up summary fields to aggregate the discount amounts from the child objects to the parent objects. For example, they can create a roll-up summary field on the custom line item object to sum up the discount request amounts from the custom discount request object. Then, they can create another roll-up summary field on the opportunity object to sum up the line-item-level summary discounts from the custom line item object.

### NEW QUESTION # 21

Which two best practices should be followed when using SOSL for searching?

- A. Use searches against single Objects for greater speed and accuracy.
- B. Use SOSL option to ignore custom indexes as search fields are pre-indexed.
- C. Use Find in "ALL FIELDS" for faster searches.
- D. Keep searches specific and avoid wildcards where possible.

**Answer: C,D**

Explanation:

The two best practices that should be followed when using SOSL for searching are: Keep searches specific and avoid wildcards where possible. Use Find in "ALL FIELDS" for faster searches. These best practices are helpful because they optimize the search performance and relevance. For example, keeping searches specific and avoiding wildcards where possible can reduce the number of results returned and improve the search accuracy. Using Find in "ALL FIELDS" for faster searches can leverage Salesforce's pre-defined indexes on common fields and return results more quickly than specifying individual fields.

### NEW QUESTION # 22

.....

To maximize your chances of your success in the Data-Architect Certification Exam, our company introduces you to an innovatively created exam testing tool-our Data-Architect exam questions. Not only that you will find that our Data-Architect study braindumps are full of the useful information in the real exam, but also you will find that they have the function to measure your level of exam preparation and cover up your deficiency before appearing in the actual exam.
