## Unparalleled 010-160 Free Exam by Lead2PassExam

We are so proud that we own the high pass rate of our 010-160 exam braindumps to 99%. This data depend on the real number of our worthy customers who bought our 010-160 exam guide and took part in the real exam. Obviously, their performance is wonderful with the help of our outstanding 010-160 Exam Materials. We have the definite superiority over the other 010-160 exam dumps in the market. If you choose to study with our 010-160 exam guide, your success is 100 guaranteed.

## Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q24-Q29):

### NEW QUESTION # 24

Which package management tool is used in Red Hat-based Linux Systems?

- A. packagecl
- **B. rpm**
- C. portage
- D. apt-get
- E. dpkg

**Answer: B**

Explanation:

RPM stands for RPM Package Manager (formerly known as Red Hat Package Manager), which is a powerful, command-line package management tool developed for the Red Hat operating system. It is now used as a core component in many Linux distributions such as CentOS, Fedora, Oracle Linux, openSUSE and Mageia1. RPM can install, uninstall, and query individual software packages, but it cannot manage dependency resolution like YUM2. YUM is another package management tool that is based on RPM and can handle dependencies automatically. YUM is the primary package management tool for installing, updating, removing, and managing software packages in Red Hat Enterprise Linux2. Therefore, the correct answer is B. rpm, as it is the underlying package management tool used in Red Hat-based Linux systems. Reference:

### NEW QUESTION # 25

Which of the following commands are used to get information on the proper use of ls? (Choose two correct answers.)

- A. usage ls
- **B. info ls**
- **C. man ls**
- D. option ls
- E. manual ls

**Answer: B,C**

### NEW QUESTION # 26

Which of the following examples shows the general structure of a for loop in a shell script?

- A. for ls \*.txt exec {} \;
- B. foreach @ {file} { echo \$i }
- C. for \*.txt as file => echo \$file
- **D. for file in \*.txt do  
echo \$i done**
- E. for \*.txt ( echo \$i )

**Answer: D**

Explanation:

The general structure of a for loop in a shell script is as follows12:

for variable in list do commands done

The variable is the name of a loop counter or iterator that takes on the values of the items in the list. The list can be a sequence of words, numbers, filenames, or the output of a command. The commands are the body of the loop that are executed for each value of the variable. The do and done keywords mark the beginning and the end of the loop body.

The option C. for file in \*.txt do echo \$i done follows this structure, with the variable being file, the list being \*.txt (which matches all the files with the .txt extension in the current directory), and the command being echo \$i (which prints the value of the variable i, which is presumably set somewhere else in the script).

The other options are incorrect because:

A. for \*.txt as file => echo \$file uses an invalid syntax for a for loop. The as keyword is not part of the shell script syntax, and the => symbol is not a valid operator. The correct way to write this loop would be:

for file in \*.txt do echo \$file done

B. for \*.txt ( echo \$i ) uses an invalid syntax for a for loop. The parentheses are not part of the shell script syntax, and the loop body is missing the do and done keywords. The correct way to write this loop would be:

for i in \*.txt do echo \$i done

D. for ls \*.txt exec {} ; uses an invalid syntax for a for loop. The ls command is not a valid variable name, and the exec {} ; is not a valid command. This looks like a mix of a for loop and a find command. The correct way to write this loop would be:

for file in \*.txt do exec \$file done

E. foreach @ {file} { echo \$i } uses an invalid syntax for a for loop. The foreach keyword is not part of the shell script syntax, and the @ {file} and { echo \$i } are not valid expressions. This looks like a mix of a for loop and a Perl syntax. The correct way to write

this loop would be:

```
for file in * do echo $file done
```

### NEW QUESTION # 27

Members of a team already have experience using Red Hat Enterprise Linux. For a small hobby project, the team wants to set up a Linux server without paying for a subscription. Which of the following Linux distributions allows the team members to apply as much of their Red Hat Enterprise Linux knowledge as possible?

- A. openSUSE
- **B. CentOS**
- C. Ubuntu Linux LTS
- D. Raspbian
- E. Debian GNU/Linux

**Answer: B**

### NEW QUESTION # 28

What keyword is used in a shell script to begin a loop? (Specify one keyword only, without any additional information.)

**Answer:**

Explanation:

for

### NEW QUESTION # 29
