2026 CrowdStrike Accurate CCCS-203b PDF VCE

To let the clients be familiar with the atmosphere and pace of the real CCCS-203b exam we provide the function of stimulating the exam. In such a way, our candidates will become more confident by practising on it. And our expert team updates the CCCS-203b Study Guide frequently to let the clients practice more. So the quality of our CCCS-203b practice materials is very high and we can guarantee to you that you will have few difficulties to pass the exam.

Prep4sureGuide is a globally famous IT exam provider, offering the valid and latest CrowdStrike CCCS-203b study material to all the candidates. Our mission is to provide quality CCCS-203b vce dumps which is easy to understand. There are CCCS-203b free demo for you to be downloaded. The purpose of the CCCS-203b demo is to show our CCCS-203b quality material to valuable customers. If you are satisfied with our CCCS-203b latest dumps, you can rest assured to buy it.

Study CCCS-203b Group - CCCS-203b Latest Mock Exam

Prep4sureGuide also offers CrowdStrike CCCS-203b desktop practice exam software which is accessible without any internet connection after the verification of the required license. This software is very beneficial for all those applicants who want to prepare in a scenario which is similar to the CrowdStrike Certified Cloud Specialist real examination. Practicing under these situations helps to kill CrowdStrike Certified Cloud Specialist (CCCS-203b) exam anxiety.

CrowdStrike Certified Cloud Specialist Sample Questions (Q272-Q277):

NEW QUESTION # 272
A user successfully registers a cloud account into CrowdStrike Falcon but notices that certain resources are not visible in the dashboard.
What is the most likely cause of this issue?

- A. The CrowdStrike integration only supports compute instances and does not track other resources.
- B. The CrowdStrike API key used during registration has expired.
- C. The user's CrowdStrike account does not have sufficient administrative privileges.
- D. The cloud account lacks the appropriate read-only permissions for specific resource types.

Answer: D

Explanation:
Option A: The inability to view certain resources is typically caused by missing permissions in the assigned IAM role or policy. For instance, the policy might lack permissions to query specific resource types, like storage or networking configurations. Verifying and updating the IAM policy would resolve this issue.
Option B: While an expired API key can cause connectivity issues, it would prevent all data from being visible, not just certain resources. This scenario points to a more specific permissions issue.
Option C: This is incorrect as CrowdStrike supports a wide range of cloud resources depending on the integration configuration. Limiting visibility to compute instances would suggest a configuration or permission issue, not a feature limitation.
Option D: This is incorrect because user privileges within the CrowdStrike Falcon interface do not impact the resources visible during a cloud account integration. The issue lies with the cloud account configuration.

NEW QUESTION # 273
Your organization has configured a CIEM policy to grant access to a serverless compute service for users in the "DevOps" role. However, some users in this role report that they cannot access the service. What is the most likely reason for this issue, and how can it be resolved?

- A. The cloud provider's native IAM policies are overriding the CIEM policy.
- B. The users have not been manually added to the "DevOps" role in the cloud provider's IAM system.
- C. The CIEM policy is not mapped to the appropriate cloud region for the serverless compute service.
- D. The policy does not include a condition to explicitly allow access to the serverless compute service.

Answer: C

Explanation:
Option A: CIEM policies typically grant access by default unless explicitly restricted. The lack of a specific "allow" condition is unlikely to be the issue unless the policy is overly restrictive.
Option B: CIEM manages entitlements at the group or role level, so manual addition of users to roles within the cloud provider's IAM system is not necessary if CIEM is configured correctly.
Option C: CIEM policies are designed to work in conjunction with cloud provider IAM policies.
Overrides could occur, but CIEM generally provides visibility into such conflicts, and misconfiguration is more likely.
Option D: CIEM policies often need to be configured with specific regions in mind, especially for services like serverless compute that are region-dependent. Failing to map the policy to the appropriate region will prevent users from accessing the service.

NEW QUESTION # 274
How does CrowdStrike's Application Security Posture Management (ASPM) enhance container security?

- A. By identifying and fixing insecure configurations in code before deployment
- B. By scanning deployed pods
- C. By deploying agentless runtime protection
- D. By enforcing MFA on cloud users

Answer: A

NEW QUESTION # 275
Which of the following is a requirement for deploying the Kubernetes and Container Sensor in a Kubernetes cluster?

- A. The cluster must have at least three nodes with GPU support.
- B. The sensor requires a DaemonSet to be deployed within the Kubernetes cluster.
- C. All workloads in the cluster must use privileged containers.
- D. The cluster must have the kube-proxy component disabled.

Answer: B

Explanation:
Option A: Requiring all workloads to use privileged containers would create unnecessary security risks. The Kubernetes and Container Sensor can secure non-privileged containers, which is the recommended best practice for containerized workloads.

Option B: Disabling the kube-proxy component is not required for deploying the Kubernetes and Container Sensor. Kube-proxy is an essential component of Kubernetes networking, and its removal would break cluster functionality.
Option C: The Kubernetes and Container Sensor is typically deployed as a DaemonSet to ensure that a sensor pod is running on each node in the Kubernetes cluster. This enables comprehensive monitoring and threat detection across all workloads in the cluster. The DaemonSet is a standard Kubernetes construct for deploying cluster-wide services.
Option D: GPU support is not a requirement for deploying the Kubernetes and Container Sensor.
GPU nodes are only necessary for specific workloads, such as machine learning applications, and are unrelated to the sensor's deployment.

NEW QUESTION # 276
A security team is reviewing an image assessment report for a containerized application. The report indicates multiple high-severity Common Vulnerabilities and Exposures (CVEs) related to outdated system libraries in the base image.
What is the best course of action to mitigate these vulnerabilities before deploying the container?

- A. Rebuild the container image using a more recent version of the base image that includes security patches
- B. Whitelist the vulnerabilities in the assessment report to allow deployment since the application is not directly affected
- C. Apply runtime security policies to prevent container escapes and limit access to critical system files
- D. Use a Kubernetes NetworkPolicy to isolate the vulnerable container from external network traffic

Answer: A

Explanation:
Option A: Runtime security policies (e.g., limiting system calls with seccomp) help mitigate exploitation risks but do not eliminate vulnerabilities. The CVEs could still be exploitable under certain conditions.
Option B: NetworkPolicies help restrict access to malicious actors but do not fix the vulnerabilities within the image itself. The risk remains if an attacker finds another vector of exploitation.
Option C: Updating the base image to a patched version is the most effective way to eliminate vulnerabilities before runtime. Modern container security best practices recommend using minimal and frequently updated base images to reduce attack surfaces.
Option D: Whitelisting vulnerabilities is risky, as even if the application is not directly affected today, future changes in dependencies or attack methods could expose the vulnerability.

NEW QUESTION # 277
