Many companies have been lost through negligence of service on our PSE-Strata-Pro-24 study quiz. Some useless products may bring about an adverse effect, so choose our PSE-Strata-Pro-24 practice engine is 100 percent secure for their profession and usefulness and also our considerate after-sales services. We have built effective serviceability aids in the early resolution of customer-reported problems, which then may result in higher customer satisfaction and improved warm support of PSE-Strata-Pro-24 Exam Guide.

## Palo Alto Networks PSE-Strata-Pro-24 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Deployment and Evaluation: This section of the exam measures the skills of Deployment Engineers and focuses on identifying the capabilities of Palo Alto Networks NGFWs. Candidates will evaluate features that protect against both known and unknown threats. They will also explain identity management from a deployment perspective and describe the proof of value (PoV) process, which includes assessing the effectiveness of NGFW solutions.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>Network Security Strategy and Best Practices: This section of the exam measures the skills of Security Strategy Specialists and highlights the importance of the Palo Alto Networks five-step Zero Trust methodology. Candidates must understand how to approach and apply the Zero Trust model effectively while emphasizing best practices to ensure robust network security.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Business Value and Competitive Differentiators: This section of the exam measures the skills of Technical Business Value Analysts and focuses on identifying the value proposition of Palo Alto Networks Next-Generation Firewalls (NGFWs). Candidates will assess the technical business benefits of tools like Panorama and SCM. They will also recognize customer-relevant topics and align them with Palo Alto Networks' best solutions. Additionally, understanding Strata's unique differentiators is a key component of this domain.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Architecture and Planning: This section of the exam measures the skills of Network Architects and emphasizes understanding customer requirements and designing suitable deployment architectures. Candidates must explain Palo Alto Networks' platform networking capabilities in detail and evaluate their suitability for various environments. Handling aspects like system sizing and fine-tuning is also a critical skill assessed in this domain.</li> </ul>

## Test PSE-Strata-Pro-24 Cram Review | Best PSE-Strata-Pro-24 Study Material

Our company has dedicated ourselves to develop the PSE-Strata-Pro-24 latest practice dumps for all candidates to pass the exam easier, also has made great achievement after more than ten years' development. As the certification has been of great value, a right PSE-Strata-Pro-24 exam guide can be your strong forward momentum to help you pass the exam like a hot knife through butter. On the contrary, it might be time-consuming and tired to prepare for the PSE-Strata-Pro-24 exam without a specialist study material. So it's would be the best decision to choose our PSE-Strata-Pro-24 Study Tool as your learning partner. Our PSE-Strata-Pro-24 study tool also gives numerous candidates a better perspective on the real exam. Having been specializing in the research of PSE-Strata-Pro-24 latest practice dumps, we now process a numerous of customers with our endless efforts, and we believe that our PSE-Strata-Pro-24 exam guide will percolate to your satisfaction.

## Palo Alto Networks Systems Engineer Professional - Hardware Firewall Sample Questions (Q43-Q48):

### NEW QUESTION # 43

Which two actions should a systems engineer take when a customer is concerned about how to remain aligned to Zero Trust principles as they adopt additional security features over time? (Choose two)

- A. Turn on all licensed Cloud-Delivered Security Services (CDSS) subscriptions in blocking mode for all policies.
- B. Apply decryption where possible to inspect and log all new and existing traffic flows.**
- C. Use the Best Practice Assessment (BPA) tool to measure progress toward Zero Trust principles.**
- D. Use the Policy Optimizer tool to understand security rules allowing users to bypass decryption.

**Answer: B,C**

Explanation:

When adopting additional security features over time, remaining aligned with Zero Trust principles requires a focus on constant visibility, control, and adherence to best practices. The following actions are the most relevant:

\* Why "Apply decryption where possible to inspect and log all new and existing traffic flows" (Correct Answer B)? Zero Trust principles emphasize visibility into all traffic, whether encrypted or unencrypted. Without decryption, encrypted traffic becomes a blind spot, which attackers can exploit.

By applying decryption wherever feasible, organizations ensure they can inspect, log, and enforce policies on encrypted traffic, thus adhering to Zero Trust principles.

\* Why "Use the Best Practice Assessment (BPA) tool to measure progress toward Zero Trust principles" (Correct Answer C)? The BPA tool provides detailed insights into the customer's security configuration, helping measure alignment with Palo Alto Networks' Zero Trust best practices. It identifies gaps in security posture and recommends actionable steps to strengthen adherence to Zero

Trust principles over time.

\* Why not "Turn on all licensed Cloud-Delivered Security Services (CDSS) subscriptions in blocking mode for all policies" (Option A)? While enabling CDSS subscriptions (like Threat Prevention, URL Filtering, Advanced Threat Prevention) in blocking mode can enhance security, it is not an action specifically tied to maintaining alignment with Zero Trust principles. A more holistic approach, such as decryption and BPA analysis, is critical to achieving Zero Trust.

\* Why not "Use the Policy Optimizer tool to understand security rules allowing users to bypass decryption" (Option D)? Policy Optimizer is used to optimize existing security rules by identifying unused or overly permissive policies. While useful, it does not directly address alignment with Zero Trust principles or help enforce decryption.

Reference: Palo Alto Networks' Zero Trust documentation and Best Practice Assessment (BPA) confirm the importance of decryption and best practices in aligning with Zero Trust principles.

#### NEW QUESTION # 44

In addition to DNS Security, which three Cloud-Delivered Security Services (CDSS) subscriptions are minimum recommendations for all NGFWs that handle north-south traffic? (Choose three)

- A. Enterprise DLP
- B. Advanced WildFire
- C. SaaS Security
- D. Advanced URL Filtering
- E. Advanced Threat Prevention

**Answer: B,D,E**

Explanation:

North-south traffic refers to the flow of data in and out of a network, typically between internal resources and the internet. To secure this type of traffic, Palo Alto Networks recommends specific CDSS subscriptions in addition to DNS Security.

A: SaaS Security

SaaS Security is designed for monitoring and securing SaaS application usage but is not essential for handling typical north-south traffic.

B: Advanced WildFire

Advanced WildFire provides cloud-based malware analysis and sandboxing to detect and block zero-day threats. It is a critical component for securing north-south traffic against advanced malware.

C: Enterprise DLP

Enterprise DLP focuses on data loss prevention, primarily for protecting sensitive data. While important, it is not a minimum recommendation for securing north-south traffic.

D: Advanced Threat Prevention

Advanced Threat Prevention (ATP) replaces traditional IPS and provides inline detection and prevention of evasive threats in north-south traffic. It is a crucial recommendation for protecting against sophisticated threats.

E: Advanced URL Filtering

Advanced URL Filtering prevents access to malicious or harmful URLs. It complements DNS Security to provide comprehensive web protection for north-south traffic.

Key Takeaways:

\* Advanced WildFire, Advanced Threat Prevention, and Advanced URL Filtering are minimum recommendations for NGFWs handling north-south traffic, alongside DNS Security.

\* SaaS Security and Enterprise DLP, while valuable, are not minimum requirements for this use case.

References:

\* Palo Alto Networks NGFW Best Practices

\* Cloud-Delivered Security Services

#### NEW QUESTION # 45

A company with a large Active Directory (AD) of over 20,000 groups has user roles based on group membership in the directory. Up to 1,000 groups may be used in Security policies. The company has limited operations personnel and wants to reduce the administrative overhead of managing the synchronization of the groups with their firewalls.

What is the recommended architecture to synchronize the company's AD with Palo Alto Networks firewalls?

- A. Configure a group mapping profile, without a filter, to synchronize all groups.
- B. Configure NGFWs to synchronize with the AD after deploying the Cloud Identity Engine (CIE) and agents.
- C. Configure a group mapping profile with custom filters for LDAP attributes that are mapped to the user roles.

- D. Configure a group mapping profile with an include group list.

**Answer: D**

Explanation:

Synchronizing a large Active Directory (AD) with over 20,000 groups can introduce significant overhead if all groups are synchronized, especially when only a subset of groups (e.g., 1,000 groups) are required for Security policies. The most efficient approach is to configure a group mapping profile with an include group list to minimize unnecessary synchronization and reduce administrative overhead.

- \* Why "Configure a group mapping profile with an include group list" (Correct Answer C)? Using a group mapping profile with an include group list ensures that only the required 1,000 groups are synchronized with the firewall. This approach:
  - \* Reduces the load on the firewall's User-ID process by limiting the number of synchronized groups.
  - \* Simplifies management by focusing on the specific groups relevant to Security policies.
  - \* Avoids synchronizing the entire directory (20,000 groups), which would be inefficient and resource-intensive.
- \* Why not "Configure a group mapping profile, without a filter, to synchronize all groups" (Option B)? Synchronizing all 20,000 groups would unnecessarily increase administrative and resource overhead. This approach contradicts the requirement to reduce administrative burden.
- \* Why not "Configure a group mapping profile with custom filters for LDAP attributes that are mapped to the user roles" (Option A)? While filtering LDAP attributes can be useful, this approach is more complex to implement and manage compared to an include group list. It does not directly address the problem of limiting synchronization to a specific subset of groups.
- \* Why not "Configure NGFWs to synchronize with the AD after deploying the Cloud Identity Engine (CIE) and agents" (Option D)? While the Cloud Identity Engine (CIE) is a modern solution for user and group mapping, it is unnecessary in this scenario. A traditional group mapping profile with an include list is sufficient and simpler to implement. CIE is typically used for complex hybrid or cloud environments.

Reference: Palo Alto Networks Group Mapping documentation recommends using include group lists for scenarios where only a subset of AD groups is required for policy enforcement.

**NEW QUESTION # 46**

What does Policy Optimizer allow a systems engineer to do for an NGFW?

- A. Recommend best practices on new policy creation
- B. Identify Security policy rules with unused applications
- C. Act as a migration tool to import policies from third-party vendors
- D. Show unused licenses for Cloud-Delivered Security Services (CDSS) subscriptions and firewalls

**Answer: B**

Explanation:

Policy Optimizer is a feature designed to help administrators improve the efficiency and effectiveness of security policies on Palo Alto Networks Next-Generation Firewalls (NGFWs). It focuses on identifying unused or overly permissive policies to streamline and optimize the configuration.

- \* Why "Identify Security policy rules with unused applications" (Correct Answer C)? Policy Optimizer provides visibility into existing security policies and identifies rules that have unused or outdated applications. For example:
  - \* It can detect if a rule allows applications that are no longer in use.
  - \* It can identify rules with excessive permissions, enabling administrators to refine them for better security and performance. By addressing these issues, Policy Optimizer helps reduce the attack surface and improves the overall manageability of the firewall.
- \* Why not "Recommend best practices on new policy creation" (Option A)? Policy Optimizer focuses on optimizing existing policies, not creating new ones. While best practices can be applied during policy refinement, recommending new policy creation is not its purpose.
- \* Why not "Show unused licenses for Cloud-Delivered Security Services (CDSS) subscriptions and firewalls" (Option B)? Policy Optimizer is not related to license management or tracking. Identifying unused licenses is outside the scope of its functionality.
- \* Why not "Act as a migration tool to import policies from third-party vendors" (Option D)? Policy Optimizer does not function as a migration tool. While Palo Alto Networks offers tools for third-party firewall migration, this is separate from the Policy Optimizer feature.

Reference: The Palo Alto Networks Policy Optimizer documentation highlights its primary function of identifying unused or overly broad policy rules to optimize firewall configurations.

**NEW QUESTION # 47**

While responding to a customer RFP, a systems engineer (SE) is presented the question, "How do PANW firewalls enable the

mapping of transactions as part of Zero Trust principles?" Which two narratives can the SE use to respond to the question? (Choose two.)

- A. Describe how Palo Alto Networks NGFW Security policies are built by using users, applications, and data objects.
- B. Explain how the NGFW can be placed in the network so it has visibility into every traffic flow.
- C. Reinforce the importance of decryption and security protections to verify traffic that is not malicious.
- D. Emphasize Zero Trust as an ideology, and that the customer decides how to align to Zero Trust principles.

**Answer: A,B**

Explanation:

Zero Trust is a strategic framework for securing infrastructure and data by eliminating implicit trust and continuously validating every stage of digital interaction. Palo Alto Networks NGFWs are designed with native capabilities to align with Zero Trust principles, such as monitoring transactions, validating identities, and enforcing least-privilege access. The following narratives effectively address the customer's question:

- \* Option A: While emphasizing Zero Trust as an ideology is accurate, this response does not directly explain how Palo Alto Networks firewalls facilitate mapping of transactions. It provides context but is insufficient for addressing the technical aspect of the question.
- \* Option B: Decryption and security protections are important for identifying malicious traffic, but they are not specific to mapping transactions within a Zero Trust framework. This response focuses on a subset of security functions rather than the broader concept of visibility and policy enforcement.
- \* Option C (Correct): Placing the NGFW in the network provides visibility into every traffic flow across users, devices, and applications. This allows the firewall to map transactions and enforce Zero Trust principles such as segmenting networks, inspecting all traffic, and controlling access. With features like App-ID, User-ID, and Content-ID, the firewall provides granular insights into traffic flows, making it easier to identify and secure transactions.
- \* Option D (Correct): Palo Alto Networks NGFWs use security policies based on users, applications, and data objects to align with Zero Trust principles. Instead of relying on IP addresses or ports, policies are enforced based on the application's behavior, the identity of the user, and the sensitivity of the data involved. This mapping ensures that only authorized users can access specific resources, which is a cornerstone of Zero Trust.

## NEW QUESTION # 48

.....

We attach importance to candidates' needs and develop the PSE-Strata-Pro-24 useful test files from the perspective of candidates, and we sincerely hope that you can succeed with the help of our practice materials. Our aim is to let customers spend less time to get the maximum return. By choosing our PSE-Strata-Pro-24 study guide, you only need to spend a total of 20-30 hours to deal with the exam, because our PSE-Strata-Pro-24 Study Guide is highly targeted and compiled according to the syllabus to meet the requirements of the exam. As long as you follow the pace of our PSE-Strata-Pro-24 useful test files, you will certainly have unexpected results.
