Certification Plat-Dev-301 Questions - Plat-Dev-301 Real Question

Our Plat-Dev-301 study materials are easy to be mastered and boost varied functions. We compile Our Plat-Dev-301 preparation questions elaborately and provide the wonderful service to you thus you can get a good learning and preparation for the Plat-Dev-301 Exam. After you know the characteristics and functions of our Plat-Dev-301 training materials in detail, you will definitely love our exam dumps and enjoy the wonderful study experience.

Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q106-Q111):

NEW QUESTION # 106

A company uses Salesforce to sell products to customers. They also have an external product information management (PIM) system that is the system of record for products.

A developer received these requirements:

* Whenever a product is created or updated in the PIM, a product must be created or updated as a Product? record in Salesforce and a PricebookEntry record must be created or updated automatically by Salesforce.

= The PricebookEntry should be created in a Pricebook2 that is specified in a custom setting.

What should the developer use to satisfy these requirements?

- A. Invocable Action
- B. SOObject Tree REST
- C. Custom Apex REST
- D. Event Monitoring

Answer: C

Explanation:

Custom Apex REST services are the optimal solution for integrating Salesforce with an external PIM system. When a product is created or updated in the PIM, the external system can make a REST call to a custom Apex REST endpoint in Salesforce, which then can create or update the Product2 and PricebookEntry records. This method allows using custom settings to determine the Pricebook2 dynamically.

NEW QUESTION # 107

A developer is trying to decide between creating a Visualforce component or a Lightning component for a custom screen. Which functionality consideration impacts the final decision?

- A. Does the screen need to be rendered as a PDF without using a thirdparty application?
- B. Will the screen be accessed via a mobile app?
- C. Will the screen make use of a JavaScript framework?
- D. Does the screen need to be accessible from the Lightning Experience UI?

Answer: A

Explanation:

Visualforce can render pages as PDFs, which Lightning Components cannot do. This functionality is crucial if PDF rendering is required.

NEW QUESTION # 108

Which three Visualforce components can be used to initiate Ajax behavior to perform partial page updates? Choose 3 answers

- A. <apex:commandButton>
- B. <Apex:form>
- C. <apex:actionsStatus>
- D. <apex:commandLink>
- E. <apex:actionSupport>

Answer: A,D,E

Explanation:

<apex:commandLink> and <apex:commandButton> components can cause the form data to be sent to the server and can be configured to refresh specific parts of the page.

<apex:actionSupport> adds AJAX support to other components and can trigger partial page updates based on events such as onclick, onchange, etc.

Visualforce Guide

NEW QUESTION # 109

Refer to the code snippet below:

□ A custom object called Credit_Memo__c exists in a Salesforce environment. As part of a new feature development that retrieves and manipulates this type of record, the developer needs to ensure race conditions are prevented when a set of records are modified within an Apex transaction. In the preceding Apex code, how can the developer alter the query statement to use SOQL features to prevent race conditions within a transaction? A)

- B)
- C)
- D)

- A. Option B
- B. Option D
- C. Option C
- D. Option A

Answer: D

Explanation:

To prevent race conditions during an Apex transaction, the SOQL query can be modified to include the "FOR UPDATE" keyword. This keyword locks the records that are returned by the query, preventing other transactions from modifying them until the current transaction is complete. This ensures that the retrieved records cannot be changed by another process before the current transaction is completed, thus preventing race conditions. The correct option to use in the code snippet provided is:

```
[SELECT Id, Name, Amount__c FROM Credit_Memo__c WHERE Customer_Id__c = :customerId LIMIT 50 FOR UPDATE]
```

This will lock up to 50 records of Credit_Memo__c with the specified Customer_Id__c for the duration of the transaction.

FOR UPDATE

Preventing Record Update Conflicts

NEW QUESTION # 110

The Account object has a field, Audit_Code__c, that is used to specify what type of auditing the Account needs and a Lookup to User, Auditor__c, that is the assigned auditor. When an Account is initially created, the user specifies the Audit_Code__c. Each User in the org has a unique text field, Audit_Code__e, that is used to automatically assign the correct user to the Account's Auditor__c field.

What should be changed to most optimize the code's efficiency? Choose 2 answers

- A. Add a WHERE clause to the SOQL query to filter on audit codes.
- B. Build a Map<Id, List<string>> of Account Id to audit codes.
- C. Build a Map<string, List<Account>> of audit code to accounts.
- D. Add an initial SOQL query to get all distinct audit codes.

Answer: A,C

Explanation:

To optimize the code's efficiency when assigning users to the Account's Auditor field based on the audit code, the following changes should be considered:

B . Building a map of audit code to accounts (Map<string, List<Account>>) would allow for efficient grouping of accounts by their audit code. This would make it easier to process accounts with the same audit code in a single operation, reducing the number of SOQL queries and DML operations needed.

D . Adding a WHERE clause to the SOQL query to filter on audit codes would limit the number of records returned by the query. This means the code only processes relevant User records with matching audit codes, thereby reducing the processing time and memory consumption.

Option A is not recommended because querying for all distinct audit codes without any context of the accounts being processed could be inefficient. Option C is less effective because it would involve creating a mapping of Account Ids to audit codes, which doesn't aid in the efficient assignment of auditor to accounts.
