Fortinet FCP - Google Cloud Security 7.6 Administrator Sample Questions (Q22-Q27):

NEW QUESTION # 22

Your organization is running an application in their shared services virtual public cloud (VPC) and must control network access natively in the cloud.

How can your organization meet this requirement?

- A. Create IAM access to allow access from specified resources only.
- **B. Create a firewall rule that allows access to the application instance only.**
- C. Create another VPC in front of the shared services VPC and deploy FortiGate.
- D. Create a firewall policy for the entire VPC that allows access from all networks.

Answer: B

Explanation:

Creating specific firewall rules that restrict access directly to the application instance allows precise native network access control within the shared services VPC.

NEW QUESTION # 23

Google Cloud network services offer vast functionality and inter-connectivity between the cloud and on- premises networks.

Which three additional functions does FortiGate offer when deployed in Google Cloud to complement the native services offered by Google Cloud? (Choose three.)

- **A. SSL VPN**
- **B. Secure SD-WAN with application visibility**
- C. OSPF over IPSec
- **D. SSL inspection**
- E. Web filtering

Answer: A,B,D

Explanation:

FortiGate provides SSL VPN capabilities for secure remote access.

It offers SSL inspection to decrypt and inspect encrypted traffic for threats.

FortiGate supports Secure SD-WAN with deep application visibility and control, enhancing network performance and security beyond native Google Cloud services.

NEW QUESTION # 24

An organization has decided to deploy an active-active high-availability cluster in Google Cloud.

Which three load balancing features are critical to the successful deployment of the cluster? (Choose three.)

- A. The session termination of the external passthrough network load balancer
- B. The L3_DEFAULT protocol in the forwarding rule of the internal passthrough network load balancer
- **C. The symmetric hashing of the internal passthrough network load balancer**
- **D. The health check used by the internal and the external passthrough network load balancer**
- **E. The forwarding rule for the internal passthrough network load balancer as the next hop for custom routes**

Answer: C,D,E

Explanation:

Health checks ensure load balancers route traffic only to healthy cluster members.

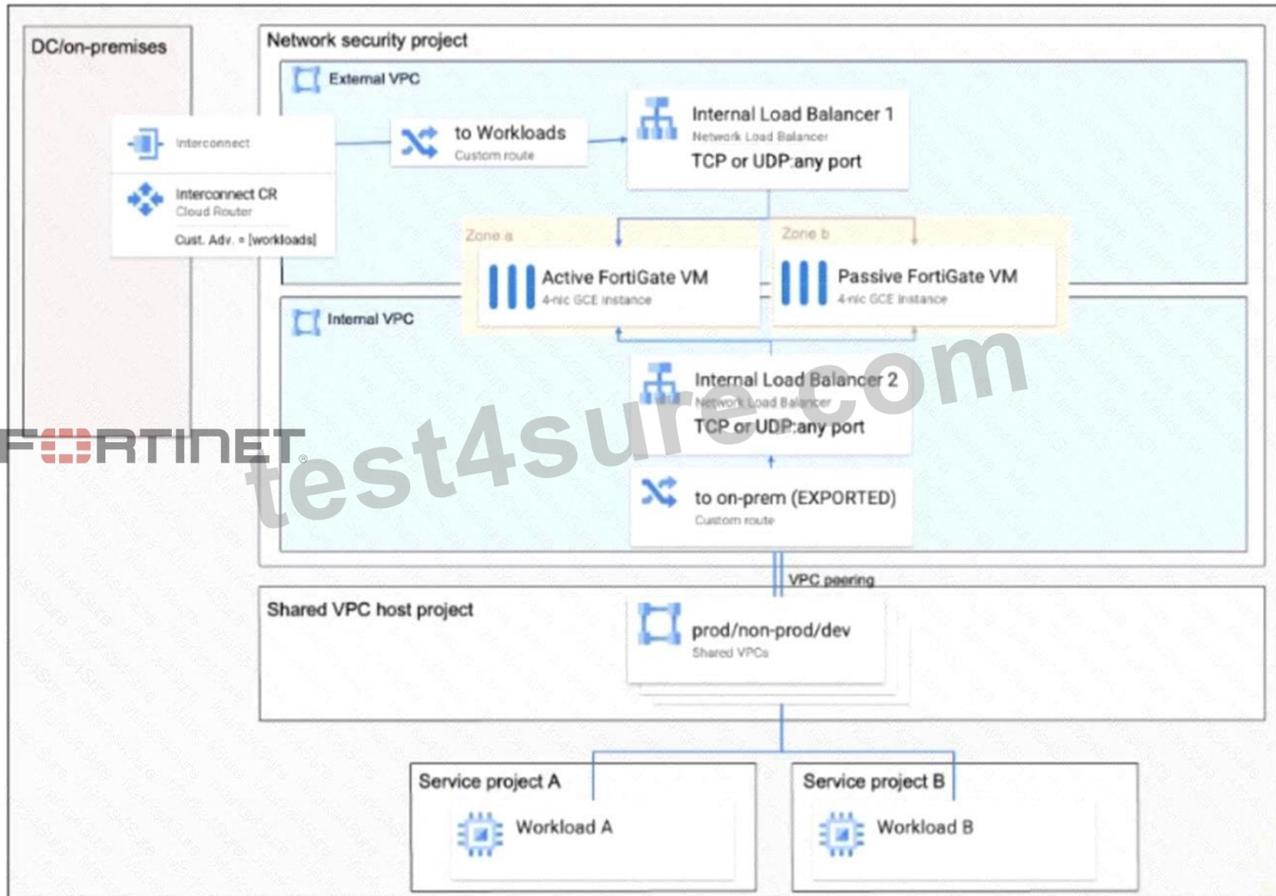

Forwarding rules act as next hops in routing, directing traffic appropriately within the HA cluster.

Symmetric hashing ensures consistent and balanced traffic distribution across cluster members, critical for active-active deployments.

NEW QUESTION # 25

Refer to the exhibit.

Hybrid cloud environment

In this hybrid environment, in which two ways does the traffic flow from a network node in the on-premises network to Workload B in Google Cloud? (Choose two.)

- A. Traffic will not reach the FortiGate devices because both load balancers are internal.
- B. Once the traffic has been inspected, the active FortiGate uses VPC peering to forward the traffic to the Server project A VPC.
- C. Traffic will be routed using VPC peering from the Internal VPC to the destination subnet.
- D. When the packet reaches the external VPC, it is forwarded to the active FortiGate cluster member using a custom static route.

Answer: C,D

Explanation:

Traffic from on-premises enters the external VPC and is routed to the active FortiGate VM via custom routes for inspection. After inspection, traffic is routed through VPC peering from the internal VPC to the service project subnet where Workload B resides.

NEW QUESTION # 26

A cloud administrator is tasked with protecting web applications hosted in Google Cloud. Which three cloud offerings can the administrator use to accomplish the task? (Choose three.)

- A. Google Cloud IAM
- B. FortiWeb Cloud
- C. FortiWeb VM
- D. Google Cloud Run
- E. Google Cloud Armor

Answer: B,C,E

Explanation:

FortiWeb VM is a web application firewall (WAF) deployed on Google Cloud to protect web apps. Google Cloud Armor provides DDoS and application-level protection. FortiWeb Cloud offers cloud-native WAF services to protect applications hosted in Google Cloud.
