Valid New EMEA-Advanced-Support Test Braindumps Provide Prefect Assistance in EMEA-Advanced-Support Preparation

No matter how busy you are, you must reserve some time to study. As we all know, knowledge is wealth. If you have a strong competitiveness in the society, no one can ignore you. Then here comes the good news that our EMEA-Advanced-Support practice materials are suitable for you. For the advantage of our EMEA-Advanced-Support Exam Questions is high-efficient. No only we can give the latest and most accurate knowledge on the subject, but also we can help you pass the exam and get the EMEA-Advanced-Support certification in the least time.

Fortinet EMEA Advanced Support Exam Sample Questions (Q25-Q30):

NEW QUESTION # 25
TCP protocol can be used for data delivery via multicast

- A. Yes
- B. No

Answer: B

Explanation:
TCP is a unicast, connection-oriented protocol that ensures reliable data delivery between two endpoints using sequence numbers and acknowledgments. Multicast, which sends data to multiple recipients, is supported by UDP, not TCP, due to TCP's requirement for a direct connection. Fortinet devices handle multicast traffic via UDP-based protocols like IGMP or PIM. Exact extract: "TCP is a unicast protocol that establishes a reliable connection between two devices... Multicast traffic, such as streaming or group communications, relies on UDP, as TCP does not support multicast delivery."

NEW QUESTION # 26
Which protocol does FortiGate use for secure management access by default?

- A. Telnet
- B. SNMP
- C. SSH
- D. HTTP

Answer: C

Explanation:
FortiGate uses SSH (Secure Shell) by default for secure management access, providing encrypted command- line access. Telnet (A) and HTTP (C) are insecure, and SNMP (D) is for monitoring, not management. Exact extract: "FortiGate enables SSH by default for secure management access, providing encrypted CLI access to administrators."

NEW QUESTION # 27
What happens when a router receives a packet for forwarding with a TTL value of 1?

- A. The TTL is decreased to 0, the packet is dropped and an ICMP message is sent to the transmitting IP
- B. It decreases the value to 0 and then forwards it
- C. It increments it and passes it on to the next router
- D. The packet is only forwarded through the router to a locally attached network

Answer: A

Explanation:
When a router, such as a FortiGate, receives a packet with a TTL (Time to Live) of 1, it decrements the TTL to 0, drops the packet, and sends an ICMP Time Exceeded message to the source IP. This prevents infinite loops in routing. Option A is incorrect as TTL is decremented, not incremented; B and D are incorrect as the packet is not forwarded when TTL reaches 0. Exact extract: "When a packet's TTL reaches 1, the router decrements it to 0, drops the packet, and sends an ICMP Time Exceeded message to the source IP address to prevent routing loops."

NEW QUESTION # 28
Which of the following are request methods in HTTP?

- A. LIST
- B. HEAD
- C. RETR
- D. GET

Answer: B,D

Explanation:

HTTP defines standard request methods, including GET (retrieve a resource) and HEAD (retrieve headers only). LIST and RETR are not standard HTTP methods; RETR is used in FTP, and LIST is not a recognized method in either protocol. The original document incorrectly lists only A, omitting C. Exact extract: "HTTP supports several request methods, including GET, HEAD, POST, PUT, DELETE, etc... GET retrieves a resource, while HEAD retrieves only the headers without the body content."

NEW QUESTION # 29

Which parts of the IKE protocol below are responsible for authenticating the User (username/password) of a dialup IPsec tunnel? (Check all correct answers)

- A. IKEv1 phase1
- B. IKEv1 Xauth
- C. IKEv2 EAP
- D. IKEv1 phase2
- E. IKEv2 SA_INIT

Answer: B,C

Explanation:

For user authentication in dialup IPsec, IKEv1 uses XAuth (Extended Authentication) after Phase 1 for username/password. IKEv2 uses EAP (Extensible Authentication Protocol) for similar user auth. Phase 1 and SA_INIT are for peer auth, Phase 2 for child SA negotiation. Exact extract: XAuth increases security by requiring remote dialup client users to authenticate in a separate exchange at the end of phase 1. IPsec IKEv2 VPNs now support certificate authentication and EAP authentication at the same time from a dialup FortiClient. With the eap-cert-auth setting ... IPsec IKEv2 VPNs now support certificate authentication and EAP authentication at the same time from a dialup FortiClient. IPsec IKEv1 uses XAUTH for user authentication, and IPsec IKEv2 uses EAP for user authentication. Only EAP-TTLS is interoperable with LDAP. For LDAP based user ... In your scenario, the user cannot authenticate by providing both a PSK and their credentials (using one of multiple EAP methods).

NEW QUESTION # 30

......

We don't want you to prepare and practice the old questions and waste time. Therefore, our team of certified experts includes updated Fortinet EMEA Advanced Support Exam EMEA-Advanced-Support Exam Questions as soon as they are released. Real4exams provides up-to-date Fortinet exam questions.
