As we all know, it is a must for all of the candidates to pass the ADP exam if they want to get the related ADP certification which serves as the best evidence for them to show their knowledge and skills. If you want to simplify the preparation process, here comes a piece of good news for you. We will bring you integrated ADP Exam Materials to the demanding of the ever-renewing exam,

which will be of great significance for you to keep pace with the times. Before your purchase, you can free download the demo of our ADP exam questions to check the outstanding quality.

Google Associate Data Practitioner Sample Questions (Q46-Q51):

NEW QUESTION # 46

Your organization needs to store historical customer order data.

a. The data will only be accessed once a month for analysis and must be readily available within a few seconds when it is accessed. You need to choose a storage class that minimizes storage costs while ensuring that the data can be retrieved quickly. What should you do?

- A. Store the data in Cloud Storage using Nearline storage.
- B. Store the data in Cloud Storage using Standard storage.
- C. Store the data in Cloud Storage using Archive storage.
- D. Store the data in Cloud Storage using Coldline storage.

Answer: A

NEW QUESTION # 47

You are migrating data from a legacy on-premises MySQL database to Google Cloud. The database contains various tables with different data types and sizes, including large tables with millions of rows and transactional data. You need to migrate this data while maintaining data integrity, and minimizing downtime and cost. What should you do?

- A. Use Database Migration Service to replicate the MySQL database to a Cloud SQL for MySQL instance.
- B. Set up a Cloud Composer environment to orchestrate a custom data pipeline. Use a Python script to extract data from the MySQL database and load it to MySQL on Compute Engine.
- C. Use Cloud Data Fusion to migrate the MySQL database to MySQL on Compute Engine.
- D. Export the MySQL database to CSV files, transfer the files to Cloud Storage by using Storage Transfer Service, and load the files into a Cloud SQL for MySQL instance.

Answer: A

NEW QUESTION # 48

You work for an ecommerce company that has a BigQuery dataset that contains customer purchase history, demographics, and website interactions. You need to build a machine learning (ML) model to predict which customers are most likely to make a purchase in the next month. You have limited engineering resources and need to minimize the ML expertise required for the solution. What should you do?

- A. Use BigQuery ML to create a logistic regression model for purchase prediction.
- B. Export the data to Cloud Storage, and use AutoML Tables to build a classification model for purchase prediction.
- C. Use Colab Enterprise to develop a custom model for purchase prediction.
- D. Use Vertex AI Workbench to develop a custom model for purchase prediction.

Answer: A

NEW QUESTION # 49

Your organization's ecommerce website collects user activity logs using a Pub/Sub topic. Your organization's leadership team wants a dashboard that contains aggregated user engagement metrics. You need to create a solution that transforms the user activity logs into aggregated metrics, while ensuring that the raw data can be easily queried. What should you do?

- A. Create a Cloud Storage subscription to the Pub/Sub topic. Load the activity logs into a bucket using the Avro file format. Use Dataflow to transform the data, and load it into a BigQuery table for reporting.
- B. Create a BigQuery subscription to the Pub/Sub topic, and load the activity logs into the table. Create a materialized view in BigQuery using SQL to transform the data for reporting.
- C. Create an event-driven Cloud Run function to trigger a data transformation pipeline to run. Load the transformed activity logs into a BigQuery table for reporting.
- D. Create a Dataflow subscription to the Pub/Sub topic, and transform the activity logs. Load the transformed data into a

BigQuery table for reporting.

Answer: D

NEW QUESTION # 50

You are working with a large dataset of customer reviews stored in Cloud Storage. The dataset contains several inconsistencies, such as missing values, incorrect data types, and duplicate entries. You need to clean the data to ensure that it is accurate and consistent before using it for analysis. What should you do?

- A. Use Storage Transfer Service to move the data to a different Cloud Storage bucket. Use event triggers to invoke Cloud Run functions to load the data into BigQuery. Use SQL for analysis.
- B. Use BigQuery to batch load the data into BigQuery. Use SQL for cleaning and analysis.
- C. Use the PythonOperator in Cloud Composer to clean the data and load it into BigQuery. Use SQL for analysis.
- D. Use Cloud Run functions to clean the data and load it into BigQuery. Use SQL for analysis.

Answer: B

NEW QUESTION # 51
