

# Salesforce Analytics-Con-301 Practice Test Fee, Valid Analytics-Con-301 Test Materials

P.S. Free & New Analytics-Con-301 dumps are available on Google Drive shared by SurePassExams:  
[https://drive.google.com/open?id=1K7eskuXg9f9LNMhP\\_v04Ux8jLPa9sLQ3](https://drive.google.com/open?id=1K7eskuXg9f9LNMhP_v04Ux8jLPa9sLQ3)

In your day-to-day life, things look like same all the time, but preparing for critical Analytics-Con-301 practice exam is not one of those options. About the exam ahead of you this time, our Analytics-Con-301 study braindumps will be your indispensable choices. Before you get the official one, you can estimate our quality by downloading the free demos. They are all masterpieces from professional experts and all content are accessible and easy to remember, so no need to spend a colossal time to practice on them. Just practice with our Analytics-Con-301 Exam Guide on a regular basis and desirable outcomes will be as easy as a piece of cake. On some tricky questions, you don't need to think too much. Only you memorize our questions and answers of Analytics-Con-301 study braindumps, you can pass exam simply.

## Salesforce Analytics-Con-301 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• <b>Data Management:</b> This part focuses on establishing governance and support for published content. Tableau Consultants are expected to manage data security, publish and maintain data sources and workbooks, and oversee content access. It includes applying governance best practices, using metadata APIs, and supporting administration functions to maintain data integrity and accessibility.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• <b>Data Visualization:</b> This section evaluates the Tableau Consultant's ability to design effective visual analytics solutions. It involves creating dashboards and visual reports that enhance user understanding, employing techniques like dynamic actions and advanced chart types, and ensuring performance optimization for an interactive user experience.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• <b>Business Consulting:</b> For Tableau Consultants, this section involves designing and troubleshooting calculations and workbooks to meet advanced analytical use cases. It covers selecting appropriate chart types, applying Tableau's order of operations in calculations, building interactivity into dashboards, and optimizing workbook performance by resolving resource-intensive queries and other design-related issues.</li></ul>

## Valid Analytics-Con-301 Test Materials, Analytics-Con-301 Test Collection Pdf

If you have any questions on our Analytics-Con-301 exam question, you can just contact us for help. Even if it is a technical problem, our professional specialists will provide you with one-on-one services to help you solve it in the first time. And our Analytics-Con-301 learning materials are really cost-effective in this respect. We always believe that customer satisfaction is the most important. And we always put the considerations of the customers as the most important matters. Our Analytics-Con-301 Study Guide won't let you down.

### Salesforce Certified Tableau Consultant Sample Questions (Q94-Q99):

#### NEW QUESTION # 94

A consultant is working with a Tableau Server customer. The customer asks the consultant if there is a need to upgrade their instance of Tableau Server that was installed over 1 year ago.

Which two situations justify the need for an upgrade? Choose two.

- A. The need to access new features and improvements from Tableau Cloud
- B. Users are complaining of performance; the upgrade will reduce the server's hardware requirements
- C. The security team has a report of bugs and security vulnerabilities in older versions of Tableau
- D. Compatibility with newer Tableau Desktop and Prep Builder versions that users might want to install

**Answer: C,D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Tableau's upgrade guidance identifies two major drivers for upgrading Tableau Server:

- \* Version Compatibility with Tableau Desktop and Tableau Prep Builder
- \* Tableau Server must be equal to or newer than the version used by Desktop and Prep Builder for publishing.
- \* Organizations upgrading Desktop often must upgrade Server to avoid compatibility issues.
- \* This is a core reason to update a year-old installation.
- \* Security and Bug Fixes
- \* Tableau regularly publishes security patches, bug fixes, and stability enhancements.
- \* Older versions accumulate unresolved security issues that may be identified by security teams.
- \* Tableau explicitly states that upgrading ensures the instance receives the latest security protections.

Option B is incorrect because upgrading does not reduce hardware requirements; in many cases hardware needs may increase.

Option C is incorrect because Tableau Cloud features do not require upgrading Tableau Server. Tableau Cloud enhancements are independent of Server versions.

Therefore, the two conditions that justify upgrading are maintaining compatibility and addressing security vulnerabilities.

- \* Tableau's version compatibility matrix requiring alignment between Tableau Server and Desktop/Prep.
- \* Upgrade planning documents emphasizing security patches and bug fixes as key upgrade drivers.
- \* Notes describing that performance complaints alone are not solved simply by upgrading.

#### NEW QUESTION # 95

During a Tableau Cloud implementation, a Tableau consultant has been tasked with implementing row-level security (RLS). They have already invested in implementing RLS within their own database for their legacy reporting solution. The client wants to know if they will be able to leverage their existing RLS after the Tableau Cloud implementation.

Which two requirements should the Tableau consultant share with the client? Choose two.

- A. The RLS in database option must be configured in Tableau Cloud.
- B. The Tableau Cloud username must exist in the database.
- C. Only live data connections can be used.
- D. Both live and extract connections can be used.

**Answer: B,C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Tableau Cloud, database-level RLS can be used only with live connections because:

- \* Tableau Cloud issues SQL queries using the logged-in user's identity.
- \* Extracts break RLS because data is pulled out of the database and stored in Tableau's hyper file.
- \* To leverage existing RLS rules, Tableau must query the database directly for the user.

Therefore:

Requirement 1:

The Tableau Cloud username (email) must exist in the database so that the database can enforce RLS using the authenticated identity.

Requirement 2:

Only live data connections support database-native RLS.

Extracts bypass database security and therefore cannot use RLS defined in the database.

Option D is incorrect because RLS is enforced in the database, not configured in Tableau Cloud.

Option B is incorrect because extracts cannot use database RLS.

Thus, correct answers are A and C.

- \* Tableau Cloud live connection security requirements.
- \* Database RLS documentation requiring matching database user identities.
- \* Explanation that extracts bypass database permission systems.

### NEW QUESTION # 96

A client's dashboard has two sections dedicated to their shops and warehouses shown when a viewer chooses either shops or warehouses with a parameter.

There are a few quick filters that apply to both, while others apply to only shops or only warehouses.

Currently, the quick filters are all shown at the left side of the dashboard. The client wants to hide all filters, but when shown, make it easy for the viewer to find the quick filters that work for only shops or only warehouses.

Which solution should the consultant recommend that meets the client's needs and is most user-friendly?

- A. Hide container with all quick filters with a Show/Hide Button.
- B. Use Dynamic Zone Visibility to inform viewers which quick filters apply to warehouses or shops.
- **C. Use Dynamic Zone Visibility to show only the quick filters that apply with the chosen parameter value and a Show/Hide Button to hide container with all the filters.**
- D. Divide the quick filters into three groups: General, for shops. Place the general filters on the left of dashboard for warehouses. Place other filters next to the sections to which they apply.

**Answer: C**

Explanation:

The most user-friendly solution is to use Dynamic Zone Visibility in combination with a Show/Hide Button. This approach allows the dashboard to dynamically display only the relevant quick filters based on the viewer's selection of shops or warehouses, thus reducing clutter and focusing the user's attention on applicable filters. The Show/Hide Button further enhances the user experience by allowing viewers to toggle the visibility of the filter container, providing a clean and organized dashboard interface.

References: Dynamic Zone Visibility is a feature in Tableau that enables dashboard elements to appear or disappear based on the value of a field or parameter. This functionality is ideal for creating interactive and user-friendly dashboards that adapt to user interactions and selections.

### NEW QUESTION # 97

A consultant used Tableau Data Catalog to determine which workbooks will be affected by a field change.

Catalog shows:

- \* Published Data Source # 7 connected workbooks
- \* Field search (Lineage tab) # 6 impacted workbooks

The client asks: Why 7 connected, but only 6 impacted?

- **A. The field being altered is not used in the seventh workbook.**
- B. The consultant lacked sufficient permissions to see the seventh workbook.
- C. The seventh workbook is connected via Custom SQL so it didn't appear in the list.
- D. The field is used twice in a single workbook.

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Key Tableau Catalog behaviors:

- \* Connected workbooks = any workbook linked to the published data source.
- \* Impacted workbooks = only workbooks that use the specific field.
- \* If a workbook connects to the data source but never uses the field, it appears as "connected" but not impacted.

This explains EXACTLY why:

- \* 7 workbooks are connected
- \* Only 6 use the changed field
- \* Therefore only 6 are impacted

This matches Option C.

Why the other options are incorrect:

A). Field used twice

Still counts as one workbook - does not explain discrepancy.

B). Permission issue

If permissions blocked visibility, the data source would not list 7 connections.

D). Custom SQL use

Catalog can still detect field usage through metadata lineage; Custom SQL does NOT hide workbook dependency.

Thus, only Option C logically explains the scenario.

\* Data Catalog lineage rules: "Connected vs. Impacted" distinction.

\* Field-level impact analysis documentation.

\* Workbook dependency logic within Tableau Catalog.

### NEW QUESTION # 98

For a new report, a consultant needs to build a data model with three different tables, including two that contain hierarchies of locations and products. The third table contains detailed warehousing data from all locations across six countries. The consultant uses Tableau Cloud and the size of the third table excludes using an extract.

What is the most performant approach to model the data for a live connection?

- A. Blending the first two tables with the third
- B. Joining the tables in Tableau Prep
- C. Relating the tables in Tableau Desktop
- D. Joining the tables in Tableau Desktop

**Answer: C**

Explanation:

For a performant live connection in Tableau Cloud, especially when dealing with large datasets that preclude the use of extracts, relating the tables in Tableau Desktop is the recommended approach. This method allows for flexibility in how the data is queried and can improve performance by leveraging Tableau's relationships feature, which optimizes queries for the underlying database.

References: The best practices for live connections in Tableau Cloud suggest using relationships to manage complex data models efficiently<sup>1</sup>. Additionally, Tableau's documentation on connecting data sources recommends using relationships for better performance with live connections<sup>2</sup>.

### NEW QUESTION # 99

.....

Knowledge of the Analytics-Con-301 study materials contains is very comprehensive, not only have the function of online learning, also can help the user to leak fill a vacancy, let those who deal with qualification exam users can easily and efficient use of the Analytics-Con-301 study materials. By visit our website, the user can obtain an experimental demonstration, free after the user experience can choose the most appropriate and most favorite Analytics-Con-301 Study Materials download. Users can not only learn new knowledge, can also apply theory into the actual problem, but also can leak fill a vacancy, can say such case selection is to meet, so to grasp the opportunity!
