

DCA Latest Test Preparation - Certification DCA Torrent

P.S. Free & New DCA dumps are available on Google Drive shared by Actual4test: <https://drive.google.com/open?id=10lqcSwSGL-KoQrvS3MS0vUNYLXcdpvWX>

Have you been many years at your position but haven't got a promotion? Or are you a new comer in your company and eager to make yourself outstanding? Our DCA exam materials can help you. After a few days' studying and practicing with our products you will easily pass the DCA examination. God helps those who help themselves. If you choose our study materials, you will find God just by your side. The only thing you have to do is just to make your choice and study our DCA Exam Questions. Isn't it very easy? So know more about our DCA study guide right now!

Docker Certified Associate (DCA) exam is a certification program that validates the skills and knowledge of professionals in the field of containerization and Docker technology. This program is designed to test the proficiency of individuals in using Docker tools and services, in creating and managing Docker images, and in deploying and managing Docker containers. The DCA certification is recognized globally as a benchmark for Docker expertise and is considered a valuable credential for professionals seeking to advance their careers in the IT industry.

The DCA Certification Exam is a comprehensive test that evaluates a candidate's understanding of Docker technologies, including Docker architecture, installation and configuration, image creation, networking, security, and troubleshooting. It is an online, proctored exam that can be taken from anywhere in the world, making it accessible to a wide range of professionals.

100% Pass Quiz 2026 Docker High-quality DCA: Docker Certified Associate (DCA) Exam Latest Test Preparation

If you want to get satisfaction with the preparation and get desire result in the DCA real exam then you must need to practice our Docker braindumps and latest questions because it is very useful for preparation. You will feel the atmosphere of DCA Actual Test with our online test engine and test your ability in any time without any limitation. There are also DCA free demo in our website for you download.

Docker Certified Associate (DCA) Exam Sample Questions (Q56-Q61):

NEW QUESTION # 56

Is this the purpose of Docker Content Trust?

Solution. Sign and verify image tags.

- A. No
- B. Yes

Answer: B

Explanation:

= The purpose of Docker Content Trust is to sign and verify image tags using digital signatures for data sent to and received from remote Docker registries¹². This allows client-side or runtime verification of the integrity and publisher of specific image tags, ensuring the provenance and security of container images³⁴. References:

NEW QUESTION # 57

Seven managers are in a swarm cluster.

Is this how should they be distributed across three datacenters or availability zones?

Solution: 4-2-1

- A. No
- B. Yes

Answer: A

Explanation:

Explanation

= This is not how the seven managers should be distributed across three datacenters or availability zones. A swarm cluster is a group of Docker hosts that are running in swarm mode and act as managers or workers¹. A manager node is responsible for maintaining the swarm state and orchestrating the services². A swarm cluster needs a quorum of managers to operate, which means a majority of managers must be available and able to communicate with each other³.

The problem with distributing the seven managers as 4-2-1 is that it creates a split-brain scenario, where the cluster can lose the quorum if one datacenter or availability zone fails. For example, if the datacenter with four managers goes down, the remaining three managers will not have enough votes to form a quorum, and the cluster will stop functioning. Similarly, if the datacenter with one manager goes down, the cluster will lose the tie-breaking vote and will not be able to elect a leader⁴.

A better way to distribute the seven managers across three datacenters or availability zones is to use 3-2-2, which ensures that the cluster can tolerate the failure of any one datacenter or availability zone and still maintain the quorum. For example, if the datacenter with three managers goes down, the remaining four managers will have enough votes to form a quorum and elect a leader. Similarly, if the datacenter with two managers goes down, the remaining five managers will have enough votes to form a quorum and elect a leader⁴. References:

NEW QUESTION # 58

Your organization has a centralized logging solution, such as Splunk.

Will this configure a Docker container to export container logs to the logging solution?

Solution. docker system events- -filter splunk

- A. No
- B. Yes

Answer: A

Explanation:

The command `docker system events --filter splunk` will not configure a Docker container to export container logs to the logging solution. The command `docker system events` will display real-time events from the Docker daemon, such as container creation, start, stop, etc. The `--filter` option will filter the events by various criteria, such as type, label, name, etc. However, there is no filter for splunk, and even if there was, it would only show the events related to Splunk, not the container logs. To configure a Docker container to export container logs to Splunk, you need to use the Splunk logging driver, which is a plugin that sends container logs to HTTP Event Collector in Splunk Enterprise and Splunk Cloud. You can use the `--log-driver` and `--log-opt` options when creating or running a container to specify the Splunk logging driver and its options, such as the Splunk token, URL, source, sourcetype, index, etc. Alternatively, you can configure the Splunk logging driver as the default logging driver for the Docker daemon by setting the `log-driver` and `log-opts` keys in the `daemon.json` file and restarting Docker. References:

- * docker system events
- * Splunk logging driver
- * How to send Docker containers logs to Splunk?

NEW QUESTION # 59

Will this command ensure that overlay traffic between service tasks is encrypted?

Solution: docker service create --network --secure

- A. No
- B. Yes

Answer: A

Explanation:

Explanation

This command will not ensure that overlay traffic between service tasks is encrypted, because it uses an invalid option for enabling encryption and an incomplete option for specifying the network. According to the official documentation, there is no such option as -secure for the docker service create command. The correct option to use is --network <network-name> where <network-name> is an existing overlay network that was created with encryption enabled.

References: <https://docs.docker.com/network/drivers/overlay/#encryption>

https://docs.docker.com/engine/reference/commandline/service_create/

NEW QUESTION # 60

Will this command ensure that overlay traffic between service tasks is encrypted?

Solution: docker network create -d overlay --secure

- A. No
- B. Yes

Answer: A

NEW QUESTION # 61

.....

As we all know, Selecting high quality, respected study material will help develop the required skills to pass your DCA exam test. While, where to find the best valid DCA practice dumps is an important question. Docker DCA study material will be your good guide. DCA Questions cover almost all the main topic, which can make you clear about the actual test. I believe, with the confident and our DCA valid dumps, you will get your DCA certification with ease.
