NEW QUESTION # 76
You need to recommend an availability strategy for an Azure SQL database. The strategy must meet the following requirements:
- Support failovers that do not require client applications to change
their connection strings.
- Replicate the database to a secondary Azure region.
- Support failover to the secondary region.

What should you include in the recommendation?

- A. transactional replication
- B. failover groups
- C. geo-replication
- D. Availability Zones

Answer: C

Explanation:
Active geo-replication is an Azure SQL Database feature that allows you to create readable secondary databases of individual databases on a server in the same or different data center (region).
Incorrect Answers:
C: Availability Zones are unique physical locations within a region. Each zone is made up of one or more datacenters equipped with independent power, cooling, and networking.
