Huawei HCSA-Presales-IP Network V4.0 Sample Questions (Q36-Q41):

NEW QUESTION # 36
What are the characteristics of Segment Routing?

- A. It introduces the source routing mechanism conforming to SDN.
- B. Its deployment is dependent on the controller.
- C. Its deployment is dependent on LDP and RSVP.
- D. It reduces the number of protocols and extends IGP/BGP to support label distribution without depending on LDP or RSVP.

Answer: A,D

Explanation:
Segment Routing (SR) introduces a source routing model where the source node defines the path that packets take through the network by imposing a list of segments (instructions).

SR is aligned with SDN principles - the network is programmable and flexible.

SR does NOT depend on LDP or RSVP. Instead, SR uses extensions to IGP (OSPF or IS-IS) or BGP to distribute segment information.

SR simplifies the control plane by reducing the number of protocols needed for label distribution.

SR can work with or without a controller - the controller enhances path computation but is not mandatory for basic SR operation.
