

CIS-DF Latest Exam Discount - Instant CIS-DF Discount

2026 Latest ExamDumpsVCE CIS-DF PDF Dumps and CIS-DF Exam Engine Free Share: https://drive.google.com/open?id=1VJi4Q-WGQOJZW_OQTaHFoJ3iH-X9I3bo

The best news is that during the whole year after purchasing, you will get the latest version of our CIS-DF exam prep for free, since as soon as we have compiled a new version of the study materials, our company will send the latest one of our CIS-DF study materials to your email immediately. And you will be satisfied by our service for we will auto send it to you as long as we update them. If you have to get our CIS-DF learning guide after one year, you can still enjoy 50% discounts off on the price.

With the ExamDumpsVCE Certified Implementation Specialist - Data Foundations (CMDB and CSDM) (CIS-DF) exam questions you will get to understand ServiceNow CIS-DF exam structure, difficulty level, and time constraints. Get any ExamDumpsVCE Certified Implementation Specialist - Data Foundations (CMDB and CSDM) (CIS-DF) exam questions format and start ServiceNow CIS-DF exam preparation today.

Instant ServiceNow CIS-DF Discount, CIS-DF Valid Test Voucher

The ServiceNow modern job market is becoming more and more competitive and challenging and if you are not ready for it then you cannot pursue a rewarding career. Take a smart move right now and enroll in the Certified Implementation Specialist - Data Foundations (CMDB and CSDM) (CIS-DF) certification exam and strive hard to pass the Certified Implementation Specialist - Data Foundations (CMDB and CSDM) (CIS-DF) certification exam.

ServiceNow CIS-DF Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> CSDM Fundamentals: This domain establishes Common Services Data Model knowledge including stakeholder collaboration for CI classification, CSDM methodology adherence, and understanding implementation benefits.

Topic 2	<ul style="list-style-type: none"> • Ingest: This domain addresses data ingestion methods, CI relationship management, automation tools, upgrade compatibility, handling non-discoverable CIs and attributes, compliance tracking, and Asset-CI alignment.
Topic 3	<ul style="list-style-type: none"> • Insight: This domain covers extracting value from CMDB data using Natural Language Query, custom reports, dependency views, product integrations, and Foundation Dashboards for actionable insights.
Topic 4	<ul style="list-style-type: none"> • Govern: This domain focuses on CMDB quality management through health metrics, Data Manager policies, governance frameworks, stakeholder roles, duplicate remediation, operationalization, and lifecycle management.
Topic 5	<ul style="list-style-type: none"> • Configuration: This domain covers CMDB technical setup including CI Class Manager for table hierarchies, IRE for data accuracy, and CMDB 360 • multisource configuration for comprehensive CI views.

ServiceNow Certified Implementation Specialist - Data Foundations (CMDB and CSDM) Sample Questions (Q115-Q120):

NEW QUESTION # 115

A Change Manager aims to streamline ITSM processes by automatically populating fields on the Change form when a CI is selected. The Configuration Management team ensures that the Change Group field is populated for all managed CIs. As a result, which base system field on the Change form will be automatically populated after selecting a CI?

- A. Change Group
- B. Approval Group
- C. Managed by Group
- D. Assignment Group

Answer: A

Explanation:

In a mature Configuration Management implementation within ServiceNow, CI operational attributes are leveraged to automate Change Management workflows and reduce manual effort.

When a CI is selected on a Change record, ServiceNow evaluates the CI's Change Group attribute. If this field is populated on the CI, the platform automatically copies its value into the Change Group field on the Change form. This ensures that change ownership and governance are immediately aligned with the responsible technical team.

The Change Group is distinct from the Assignment Group, which is used primarily in Incident and Task routing.

Managed by Group represents lifecycle ownership and is used by CMDB governance tools, while Approval Group controls approval workflows but is not auto-populated from CI selection.

This behavior demonstrates the value of accurate CI attributes: once populated consistently, they enable automatic field population, reduced manual errors, and faster processing across ITSM workflows.

Therefore, the correct answer is A - Change Group.

NEW QUESTION # 116

Which are business values of CMDB? (Choose two.)

- A. Automating maintenance for CI relationships
- B. Streamlining incident and change management
- C. Strengthening operational resiliency
- D. Collecting and managing financial data

Answer: B,C

Explanation:

A CMDB delivers business value when it enables better outcomes across IT and enterprise service delivery--especially when aligned with CSDM so services, offerings, and supporting technology are connected in a consumable model. Two major business values are improved operational execution and improved business continuity.

Option C is a direct business value: a trusted CMDB improves incident and change management by providing accurate CI details, relationships, and service context. This supports faster triage and assignment, better prioritization, and higher-quality impact analysis for changes. When incidents and changes are informed by dependable configuration data, organizations reduce downtime, avoid unnecessary escalations, and make safer change decisions--benefits that the business experiences as higher service quality and fewer disruptions.

Option D is also a core business value: CMDB strengthens operational resiliency by enabling clearer dependency understanding and faster response to failures. Resiliency improves when teams can quickly identify what's impacted, understand upstream/downstream relationships, and plan mitigation steps using known service-to-technology mappings. In regulated or mission-critical environments, this translates into better continuity, reduced risk exposure, and improved compliance reporting.

NEW QUESTION # 117

A CMDB Administrator needs to identify which attributes have been created specifically for the Windows Server class. Which tab in the Attributes section is used?

- A. Child
- B. Derived
- C. All
- **D. Added**

Answer: D

Explanation:

Within the CMDB class dictionary in ServiceNow, attributes can be inherited from parent classes or defined directly on a specific class. To identify attributes created specifically for the Windows Server class, administrators must use the Added tab.

The Added tab displays attributes that are unique to the selected class and not inherited from parent classes (such as Server or Computer). This is essential for understanding class-specific extensions-like Windows-only configuration details-that were introduced to support platform requirements, discovery enhancements, or organizational needs.

The All tab shows every attribute available to the class, including inherited and added attributes, which makes it difficult to isolate class-specific additions. The Child tab focuses on attributes inherited by subclasses, not attributes introduced at the current class level.

The Derived tab shows attributes calculated or derived from other data, not necessarily those created specifically for the class.

Using the Added tab supports best practices for configuration transparency, impact analysis during upgrades, and governance-especially important in Data Foundations to minimize unnecessary customization and maintain upgrade-safe designs.

Therefore, the correct answer is B - Added.

NEW QUESTION # 118

A Data Center Manager is working with the CMDB CI Class Manager to define the relationship between Application Servers and the Applications they host. The company has multiple Application Servers that host one or more Applications.

Which describes the relationship between the Application Server table [cmdb_ci_app_server] and the Application table [cmdb_ci_appl]?

- A. Many-to-one
- **B. Many-to-many**
- C. One-to-one
- D. One-to-many

Answer: B

Explanation:

In Data Foundations, "Configuration" includes modeling CI relationships in a way that reflects real-world technology dependencies and supports operational use cases such as impact analysis, troubleshooting, and service mapping. For "Application Servers host Applications," the scenario describes that multiple Application Servers can host one or more Applications. In most enterprise environments, the reverse is also true: an Application can be hosted across multiple Application Servers (for example, horizontal scaling, clustered deployments, active-active architectures, and separate servers for different tiers or components of the same application).

Because both sides can have multiple related records, the correct logical relationship is many-to-many:

One Application Server hosts many Applications

One Application can be hosted on many Application Servers

In ServiceNow CMDB terms, many-to-many relationships are represented through the CMDB relationship model (parent/child relationships), enabling the platform to store multiple relationship records linking servers and applications without forcing an unnatural

single-reference constraint.

This supports better CMDB quality and stronger downstream outcomes--especially for incident triage ("what apps are affected if this server is down?") and change impact analysis ("what servers could be impacted if we change this app component?").

A one-to-many or many-to-one model would incorrectly restrict either the server to one application or the application to one server, which does not align with common hosting patterns and would reduce the CMDB's usefulness and accuracy.

NEW QUESTION # 119

What is the value of using the CMDB in security operations? (Choose Two)

- A. Auto-resolves a vulnerability
- B. Allows the security team to assess and remediate an incident
- C. Identifies the IT infrastructure with a vulnerability
- D. Enables audits and attestations across CIs

Answer: B,C

Explanation:

The CMDB plays a critical role in security operations by providing trusted, structured insight into the organization's IT landscape. When built according to Data Foundations principles-accurate discovery, governed relationships, and alignment to CSDM-the CMDB becomes an essential enabler for security incident response and vulnerability management.

Option D is correct because the CMDB allows security teams to identify exactly which IT infrastructure components are affected by a vulnerability. By correlating vulnerability scan results with configuration items (CIs), security teams can determine whether an issue exists on a server, application, cloud resource, or network device-and understand where that CI sits within the broader service context. This eliminates blind spots and reduces time spent investigating unknown or unmanaged assets.

Option A is also correct because the CMDB supports assessment and remediation activities during security incidents. Once affected CIs are identified, the CMDB provides ownership, support group, environment, and service relationships. This enables security teams to quickly route remediation tasks to the correct resolver groups, assess business impact, and prioritize response based on service criticality. While the CMDB does not perform remediation itself, it enables informed and coordinated action.

Option B is incorrect because vulnerabilities are not auto-resolved by the CMDB; remediation requires human decision-making and execution through security, patching, or change processes. Option C, while related to governance and compliance use cases, is more aligned with GRC and audit functions rather than day-to-day security operations, making it less appropriate for this question.

In summary, the CMDB's primary value in security operations is visibility and actionable insight, enabling faster identification, assessment, and response to security threats.

NEW QUESTION # 120

.....

If you're still studying hard to pass the ServiceNow CIS-DF exam, ExamDumpsVCE help you to achieve your dream. We provide you with the best ServiceNow CIS-DF exam materials. It passed the test of practice, and with the best quality. It is better than ServiceNow CIS-DF tutorials and any other related materials. It can help you to pass the ServiceNow CIS-DF exam, and help you to become a strong IT expert.
