## ISTQB CTFL Certification Exam Sample Questions

01. Which of the following is a project risk?
- a) Skill and staff shortages
  - b) Poor software characteristics (e.g. usability)
  - c) Failure-prone software delivered
  - d) Possible reliability defect (bug) - answer:
- a) Skill and staff shortages
02. Which of these tasks would you expect to be performed during the Test Analysis and Design phase of the Fundamental Test Process?
- a) Defining test objectives
  - b) Reviewing the test basis
  - c) Creating test suites from test procedures
  - d) Analyzing lessons learned for process improvement - answerAnswer:
- b) Reviewing the test basis
03. As a test manager, you are asked for a test summary report. Concerning test activities, and according to the IEEE 829 Standard, what should be the MOST important information to include in your report?
- a) The number of test cases executed and their results.
  - b) An overview of the major testing activities, events and the status with respect to meeting goals
  - c) Overall evaluation of each development work item
  - d) Training taken by members of the test team to support the test effort - answerAnswer:
- b) An overview of the major testing activities, events and the status with respect to meeting goals
04. Which of the following statements BEST describes non-functional testing?
- a) Non-functional testing is the process of testing an integrated system to verify that it meets specified requirements.
  - b) Non-functional testing is the process of testing to determine system compliance with coding standards.

**Accurate ISTQB-CTFL Valid Test Cram Spend Your Little Time and Energy to Clear ISTQB ISTQB-CTFL exam easily**

To learn more about our ISTQB-CTFL exam braindumps, feel free to check our ISTQB Exam and Certifications pages. You can

browse through our ISTQB-CTFL certification test preparation materials that introduce real exam scenarios to build your confidence further. Choose from an extensive collection of products that suits every ISTQB-CTFL Certification aspirant. You can also see for yourself how effective our methods are, by trying our free demo. So why choose other products that can't assure your success? With IteXamguide, you are guaranteed to pass ISTQB-CTFL certification on your very first try.

## ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q289-Q294):

### NEW QUESTION # 289

Which of the following is a factor that contributes to a successful review?

- A. The author of the work product to be reviewed leads the review meeting
- B. All participants in the review are aware they will be evaluated based on the defects they will find
- C. All participants in the review are trained to deal with the review type and its objectives.
- D. Review metrics must be collected to improve the review process

**Answer: C**

Explanation:

A successful review process involves all participants being trained in the review type and understanding its objectives. This ensures that everyone can contribute effectively and understand what is expected from the review. Proper training helps to identify defects accurately and facilitates constructive feedback, leading to a more efficient and effective review process. Hence, statement C is correct according to the ISTQB CTFL syllabus.

### NEW QUESTION # 290

Which of the following BEST describes checklist-based testing?

- A. Checklist-based testing, while popular, provides little consistency and few guidelines concerning test case development
- B. Checklist-based testing may involve a list of tests based on what is important to the user as well as an understanding of why and how software fails
- C. Checklist-based testing includes formal tests from detailed lists of test conditions, allowing much repeatability
- D. Checklist-based testing is restricted to non-functional testing, including usability, performance, and security test

**Answer: B**

Explanation:

Checklist-based testing involves using checklists that contain items, such as potential test conditions, that should be tested. These checklists are often based on insights into what is important to the user, potential areas where software might fail, and specific aspects that need to be tested. It provides a structured yet flexible approach to testing, ensuring key areas are covered while allowing testers to use their experience and understanding of the system. Checklist-based testing is not limited to non-functional testing but can be applied to various types of testing, including functional testing.

### NEW QUESTION # 291

The following 4 equivalence classes are given:

Which of the following alternatives includes correct test values for x, based on equivalence partitioning?

- A. -1000; -100; 100; 1000
- B. -99; 99; 101; 1001
- C. -100; 100; 1000; 1001
- D. -500; 0; 100; 1000

**Answer: A**

Explanation:

\* The question is about selecting the correct test values for x based on equivalence partitioning.

Equivalence partitioning is a software test design technique that divides the input data of a software unit into partitions of equivalent data from which test cases can be derived. In this case, the given equivalence classes are:

- \* ( $x \leq -100$ )
- \* ( $-100 < x < 100$ )
- \* ( $100 \leq x < 1000$ )
- \* ( $x \geq 1000$ )

Option D provides a value from each of these partitions:

- \* For ( $x \leq -100$ ), it gives -1000.
- \* For ( $-100 < x < 100$ ), it gives -100 and 100.
- \* For ( $100 \leq x < 1000$ ), it gives 500.
- \* For ( $x \geq 1000$ ), it gives 1500.

So, option D covers all four given equivalence classes with appropriate values.

### NEW QUESTION # 292

Which ONE of the following statements about maintenance testing is CORRECT?

- A. Maintenance testing is only required when defects are reported in production.
- **B. Maintenance testing should be performed when enhancements, fixes, or updates are applied to an existing system.**
- C. Maintenance testing does not require test cases since it focuses solely on defect verification.
- D. Maintenance testing is performed exclusively for adaptive maintenance.

**Answer: B**

Explanation:

Comprehensive and Detailed In-Depth Explanation:

Maintenance testing is carried out whenever changes are made to an existing system, including enhancements, defect fixes, and system migrations (C). It is not limited to adaptive maintenance (A) and is needed even when no defects are reported (B). Test cases are essential to validate fixes and prevent regressions (D).

### NEW QUESTION # 293

Manager responsibilities in formal review includes all except one of the following:

- A. Decide on the execution of reviews
- **B. Determines if the review objectives have been met**
- C. Allocate time for review
- D. Planning the review

**Answer: B**

Explanation:

A formal review is a type of review that follows a defined process with formal entry and exit criteria and roles and responsibilities for participants. A formal review can have various roles involved, such as manager, moderator, author, reviewer and scribe. The manager responsibilities in formal review include all except one of the following:

\* Planning the review (correct responsibility)

\* Determines if the review objectives have been met (incorrect responsibility)

\* Decide on the execution of reviews (correct responsibility)

\* Allocate time for review (correct responsibility) The responsibility of determining if the review objectives have been met belongs to the moderator role, not to the manager role. Verified References:
