DA0-001認證指南, DA0-001指南

PDFExamDumps的CompTIA專家團隊利用自己的知識和經驗專門研究了最新的短期有效的培訓方式, 這個培訓方法對你們是很有幫助的, 可以讓你們短期內達到預期的效果, 特別是那些邊工作邊學習的考生, 可以省時有不費力。選擇PDFExamDumps的培訓資料你將得到你最想要的DA0-001培訓資料。

CompTIA DA0-001 考試，也稱為 CompTIA Data+ 認證考試，是一項旨在測試個人在數據管理領域的知識和技能的認證考試。該考試非常適合希望在數據管理和管理方面推進職業生涯的個人。考試涵蓋了各種主題，如數據庫管理、數據倉儲、數據安全、數據分析等。它是一項供應商中立的考試，這意味著它不與特定技術或解決方案相關聯，因此適用於在任何行業工作的專業人士。

最新的 CompTIA Data+ DA0-001 免費考試真題 (Q142-Q147):

問題 #142

Which one of the following is NOT a common data integration tool?

- A. ELT
- **B. XSS**
- C. ETL
- D. APIs

答案: B

解題說明:

Cross-site Scripting (XSS) is a security vulnerability usually found in websites and/or web applications that accept user input.

XSS is a client-side vulnerability that targets other application users, while SQL injection is a server-side vulnerability that targets the application's database. How do I prevent XSS in PHP? Filter your inputs with a whitelist of allowed characters and use type hints or type casting.

問題 #143

A data analyst for a media company needs to determine the most popular movie genre. Given the table below:

MovieID	Name	Genre	Actors	Rating
01	Ghost Writer	Comedy, Actions	Joshua Wellington, Susana Summons	6.5
02	Life of Suffering	Drama, Foreign, Historical	Shelly May, Rita Moralle, Ethan Warner, Sean Houser	7.2

Which of the following must be done to the Genre column before this task can be completed?

- A. Merge
- **B. Delimit**
- C. Append
- D. Concatenate

答案: B

解題說明:

Delimiting is the process of splitting a column of data into multiple columns based on a separator or delimiter character. Delimiting can help separate data that is combined or concatenated in one column into distinct values or categories. For example, if a column contains text values that are separated by commas, such as "Comedy, Suspense", delimiting can split this column into two columns, one for "Comedy" and one for "Suspense". Delimiting is different from other options, such as appending, merging, or concatenating, which are methods of combining or joining data from multiple columns or sources. In this case, the data analyst needs to determine the most popular movie genre based on the Genre column in the table. However, this column contains multiple genres for each movie, separated by commas. Therefore, the data analyst must delimit this column before this task can be completed. Therefore, the correct answer is D. Reference: Split text into different columns with functions - Office Support, How to Split Text in Excel (Using Formulas & Split Function)

問題 #144

A county in Illinois is conducting a survey to determine the mean annual income per household. The county is 427sq mi (2.65q km). Which of the following sampling methods would MOST likely result in a representative sample?

- A. A systematic survey that is sent to 100 single-family homes in the county
- B. Surveys sent to ten randomly selected homes within 5mi (8km) of the county's office
- **C. Surveys sent to 100 randomly selected homes that are reflective of the population**
- D. A stratified phone survey of 100 people that is conducted between 2:00 p.m. and 3:00 p.m.

答案: C

解題說明:

Surveys sent to 100 randomly selected homes that are reflective of the population. This is because a random sample is a type of sample that is selected by using a random method, such as a lottery or a computer-generated number, which ensures that every element in the population has an equal chance of being selected.

A random sample can result in a representative sample, which means that the sample reflects the characteristics and diversity of the population. By sending surveys to 100 randomly selected homes that are reflective of the population, the analyst can ensure that the sample is representative of the county's households and their income levels. The other sampling methods are not likely to result in a representative sample. Here is why:

A stratified phone survey of 100 people that is conducted between 2:00 p.m. and 3:00 p.m. would result in a biased sample, which means that the sample favors or excludes certain groups or elements in the population.

By conducting the survey only between 2:00 p.m. and 3:00 p.m., the analyst would miss out on people who are not available or reachable at that time, such as those who are working or sleeping. This could affect the representativeness and generalizability of the sample.

A systematic survey that is sent to 100 single-family homes in the county would result in an unrepresentative sample, which means that the sample does not reflect the characteristics and diversity of the population. By sending surveys only to single-family homes, the analyst would ignore other types of households, such as apartments, condos, or mobile homes. This could affect the accuracy and reliability of the sample.

Surveys sent to ten randomly selected homes within 5mi (8km) of the county's office would result in a small sample, which means that the sample size is too low to capture the variability and diversity of the population.

By sending surveys only to ten homes within a limited area, the analyst would miss out on many households that are located in different parts of the county. This could affect the precision and confidence of the sample.

問題 #145

An analyst needs to provide a chart to identify the composition between the categories of the survey response data set:

Favorite color	Responses
Red	15
Blue	35
Green	25
Yellow	25
Total	100

Which of the following charts would be BEST to use?

- A. Histogram
- B. Line
- **C. Pie**
- D. Waterfall
- E. Scatter plot

答案: C

問題 #146

Which one the following is not considered an aggregate function?

- A. MIN
- **B. SELECT**
- C. SUM

- D. MAX

答案：B
