

# Valid Esri EAEP2201 Questions - Latest Release To Pass Esri Exam

BONUS!!! Download part of Pass4sures EAEP2201 dumps for free: [https://drive.google.com/open?id=1VkkQt\\_b7GycFpgxDuhLAUVH0JIydTvWp](https://drive.google.com/open?id=1VkkQt_b7GycFpgxDuhLAUVH0JIydTvWp)

Candidates who want to be satisfied with the Enterprise Administration Professional 2201 (EAEP2201) preparation material before buying can try a free demo. Customers who choose this platform to prepare for the Enterprise Administration Professional 2201 (EAEP2201) exam require a high level of satisfaction. For this reason, Pass4sures has a support team that works around the clock to help EAEP2201 applicants find answers to their concerns.

The EAEP2201 certification exam covers a wide range of topics, including installation and configuration of ArcGIS Enterprise, management of portals, security and authentication, publishing and sharing content, and monitoring and troubleshooting the system. EAEP2201 Exam is designed to measure an individual's proficiency in each of these areas and assess their ability to apply best practices in administering an enterprise GIS system.

## EAEP2201 New Exam Camp | EAEP2201 Valid Exam Fee

Our EAEP2201 exam simulation is selected many experts and constantly supplements and adjust our questions and answers. When you use our EAEP2201 study materials, you can find the information you need at any time. When we update the EAEP2201 preparation questions, we will take into account changes in society, and we will also draw user feedback. If you have any thoughts and opinions in using our EAEP2201 Study Materials, you can tell us. We hope to grow with you and the continuous improvement of EAEP2201 training engine is to give you the best quality experience.

The Esri EAEP2201 exam is intended for experienced GIS professionals who have a good understanding of ArcGIS Enterprise and its capabilities. Esri recommends that candidates have at least two years of experience working with ArcGIS Enterprise before attempting the exam. Candidates are also expected to have a solid understanding of IT concepts such as networking, operating

systems, and databases. EAEP2201 Exam is available in English and can be taken at certified testing centers around the world.

## Esri Enterprise Administration Professional 2201 Sample Questions (Q38-Q43):

### NEW QUESTION # 38

A GIS administrator is analyzing the usage statistics of ArcGIS Enterprise. The administrator needs to pull tabular statistics on various groups and users about the type of content that they produce and consume.

Which action should the administrator perform?

- A. Open ArcGIS Server statistics to create a report for commonly used items.
- **B. Run usage reports in Portal for ArcGIS to determine the effect on the organization.**
- C. Use ArcGIS Monitor to capture desired information over a period of time in a report.

**Answer: B**

Explanation:

Portal for ArcGIS provides built-in usage reports that allow administrators to monitor how members are using, sharing, and contributing resources. These reports offer insights into content creation, usage patterns, and group activities. Administrators can generate and export these reports in tabular formats for further analysis.

ArcGIS Server statistics focus on service-level metrics and do not provide detailed user or group content statistics. ArcGIS Monitor captures system performance metrics but is not designed for detailed content usage analysis by users or groups.

Reference Source: ArcGIS Enterprise documentation on usage reports in Portal for ArcGIS.

### NEW QUESTION # 39

A GIS administrator is setting up a distributed collaboration between an ArcGIS Online organization and an ArcGIS Enterprise organization for a data validation project. Users from a second ArcGIS Online org will also participate.

What should the administrator set up?

- A. Enable data sharing with public access
- B. A collaboration between ArcGIS Online and ArcGIS Enterprise and then add users from the second ArcGIS Online org to the common group
- **C. Multiple collaborations between the ArcGIS Enterprise organization and multiple ArcGIS Online organizations**
- D. One collaboration with all three organizations: ArcGIS Enterprise and two ArcGIS Online orgs

**Answer: C**

Explanation:

A distributed collaboration in ArcGIS Enterprise is designed to operate between two organizations only.

Therefore, to collaborate with two separate ArcGIS Online organizations, the administrator must create separate collaborations between the Enterprise org and each ArcGIS Online org.

From Esri documentation:

"Each collaboration is established between two organizations. To collaborate with multiple organizations, you must set up multiple one-to-one collaborations."

\* Option B is incorrect because adding external users from other orgs to a group doesn't extend collaboration capabilities.

\* Option C is not supported - collaborations are strictly between two parties.

Reference: ArcGIS Enterprise - Distributed Collaboration Limitations and Multi-Org Setup

### NEW QUESTION # 40

An organization experiences a temporary loss of service for its ArcGIS Enterprise deployment due to expired licenses.

What should the administrator have done to prevent this issue?

- A. Create a Python script to run an administrative report and schedule the script to run regularly
- **B. Configure the ArcGIS Enterprise portal to send an automated email when the portal license is expiring**
- C. Use the license file in read-only mode to extend the license
- D. Design an information banner to automatically display the license expiration date

**Answer: B**

### NEW QUESTION # 41

An ArcGIS analyst is curating a series of basemaps for field crews editing utility infrastructure in the field. The analyst must ensure optimal performance. Which type of service should be published?

- A. Vector tile service
- B. Cached map service
- C. Dynamic map service

**Answer: A**

Explanation:

For field operations, Vector Tile Services are highly efficient and suitable for basemaps. They offer fast rendering, smaller file sizes, and are easily scalable across various devices, including those with limited bandwidth or processing capabilities. Vector tiles also support dynamic styling and are ideal for offline use, which is often necessary for field crews working in areas with limited connectivity.

Cached map services (Option B) are raster-based and can be larger in size, making them less optimal for mobile use. Dynamic map services (Option C) require real-time data rendering, which can be resource-intensive and may not perform well in field conditions with limited connectivity.

Reference Source: ArcGIS Enterprise documentation on customizing basemaps

### NEW QUESTION # 42

Users are reporting service timeouts and performance issues. The administrator notices that only the minimum number of instances are running during performance spikes. They want to monitor usage trends before adjusting instance settings. Which action should the administrator perform?

- A. Enable Windows Performance Monitor
- B. Monitor Task Manager on each ArcGIS Server machine
- C. Change the log level to Debug in ArcGIS Server Manager
- D. Create a report of server statistics in ArcGIS Server Manager

**Answer: D**

Explanation:

To monitor usage patterns, including the number of requests and instances in use, ArcGIS Server provides statistics reports in Server Manager. These reports show peak and average service usage, helping administrators decide how to scale service instance counts. From ArcGIS Server documentation:

"Use the ArcGIS Server Manager statistics reporting tool to monitor service usage trends over time. This data helps inform adjustments to instance counts."

\* Option A gives only raw system metrics, not service-specific insights.

\* Option B (Debug logs) causes overhead and isn't appropriate for monitoring trends.
