Answer: C

NEW QUESTION # 749

Refer to the exhibit.

An engineer must block access to the console ports for all corporate remote Cisco devices based on the recent corporate security policy but the security team still can connect through the console port. Which configuration on the console port resolves the issue?

- A. transport input telnet
- B. no exec
- C. login and password
- D. exec 0.0

Answer: B

Explanation:

"no exec" will disable access to a line. It is used if we want to allow only outgoing session (and disable incoming session) so this command will block all console port access.

There is no "exec 0 0" command. We can only find the "exec prompt" command in IOS Version 15.4(2)T4.

```
Router(config-line)#exec ?
prompt EXEC prompt
<cr>

Router(config-line)#exec pro
Router(config-line)#exec prompt ?
timestamp Print timestamps for show commands

Router(config-line)#exec prompt
```

The most similar command is "exec-timeout 0 0" command, which is used to prevent Telnet/SSH sessions from timing out.
