모두 아시다시피CompTIA N10-009인증시험은 업계에서도 아주 큰 비중을 차지할만큼 큰 시험입니다. 하지만 문제는 어떻게 이 시험을 패스할것이나이죠.CompTIA N10-009인증시험패스하기는 너무 힘들기 때문입니다. 다른사이트에 있는 자료들도 솔직히 모두 정확성이 떨어지는건 사실입니다. 하지만 우리DumpTOP의 문제와 답은 IT인증시험준비중인 모든분들한테 필요한 자료를 제공할수 있습니다. 그리고 중요한건 우리의 문제와 답으로 여러분은 한번에 시험을 패스하실수 있습니다.

DumpTOP 의 CompTIA인증 N10-009덤프는 PDF버전과 소프트웨어버전 두가지 버전으로 되어있는데 소프트웨어 버전은 시뮬레이션버전입니다. 소프트웨어버전의 문제를 푸는 과정은 시험현장을 연상케하여 시험환경에 먼저 적응하여 실제시험에서 높은 점수를 받도록 도와드릴수 있습니다.

N10-009시험패스 가능한 공부, N10-009최고품질 인증시험덤프데모

CompTIA인증 N10-009덤프로CompTIA시험을 패스,하지 못하셨다구요? 최선을 다했는데도 실패하였다는 말은 영원히 하지마세요. CompTIA인증 N10-009시험을 패스하는 방법은 많고도 많습니다. DumpTOP의CompTIA인증 N10-009덤프로 시험에 다시 도전해보세요. DumpTOP의CompTIA인증 N10-009덤프는 착한 가격에 100%에 달하는 적중율과 패스율을 보장해드립니다. 시험에서 불합격성적표를 받으시면 덤프구매시 지불한 덤프비용을 환불처리해드립니다. DumpTOP의CompTIA인증 N10-009덤프로 시험패스를 꼭봐주세요.

CompTIA N10-009 시험요강:

주제	소개
주제 1	Networking Concepts: For network administrators and IT support professionals, this domain covers
주제 2	OSI reference model concepts, Comparison of networking appliances, applications, and functions
주제 3	Network Security: This section of the exam for cybersecurity specialists and network security administrators covers the importance of basic network security concepts, Various types of attacks and their impact on the network, application of network security features, defense techniques, and solutions. Network Troubleshooting: For help desk technicians and network support specialists, this section covers troubleshooting methodology, troubleshooting common cabling and physical interface issues, troubleshooting common issues with network services, and use of appropriate tools or protocols to solve networking issues.
주제 4	Selection and configuration of wireless devices.
주제 5	Cloud concepts and connectivity options, and Common networking ports.

최신 CompTIA Network+ N10-009 무료 샘플문제 (Q376-Q381):

질문 # 376

Which of the following troubleshooting steps would provide a change advisory board with the information needed to make a decision?

- A. Develop a theory of probable cause.
- B. Identify the problem.
- C. Test the theory to determine cause.
- D. Establish a plan of action.

정답: D

설명:

A Change Advisory Board (CAB) reviews and approves network changes. Before approval, they need a detailed action plan outlining the change, potential impacts, and mitigation strategies.

* A Plan of Action includes risk assessments, rollback procedures, and deployment steps, which are critical for decision-making.

질문 # 377

Which of the following most likely requires the use of subinterfaces?

- A. A hub utilizing jumbo frames
- B. A firewall performing deep packet inspection
- C. A switch using Spanning Tree Protocol
- D. A router with only one available LAN port

정답: D

설명:

Introduction to Subinterfaces:

Subinterfaces are logical interfaces created on a single physical interface. They are used to enable a router to support multiple networks on a single physical interface.

Use Case for Subinterfaces:

Subinterfaces are commonly used in scenarios where VLANs are implemented. A router with a single physical LAN port can be configured with multiple subinterfaces, each associated with a different VLAN.

This setup allows the router to route traffic between different VLANs.

Example Configuration:

Consider a router with a single physical interface GigabitEthernet0/0 and two VLANs, 10 and 20.

```
interface GigabitEthernet0/0.10
encapsulation dot1Q 10
ip address 192.168.10.1 255.255.255.0
!
```

```
interface GigabitEthernet0/0.20
encapsulation dot1Q 20
ip address 192.168.20.1 255.255.255.0
```

The encapsulation dot1Q command specifies the VLAN ID.

Explanation of the Options:

A: A router with only one available LAN port: This is correct. Subinterfaces allow a single physical interface to manage multiple networks, making it essential for routers with limited physical interfaces.

B: A firewall performing deep packet inspection: Firewalls can use subinterfaces, but it is not a requirement for deep packet inspection.

C: A hub utilizing jumbo frames: Hubs do not use subinterfaces as they operate at Layer 1 and do not manage IP addressing.

D: A switch using Spanning Tree Protocol: STP is a protocol for preventing loops in a network and does not require subinterfaces.

Conclusion:

Subinterfaces provide a practical solution for routing between multiple VLANs on a router with limited physical interfaces. They allow network administrators to optimize the use of available hardware resources efficiently.

References:

CompTIA Network+ guide detailing VLAN configurations and the use of subinterfaces (see page Ref 9 Basic Configuration Commands).

질문 # 378

A network engineer receives a new router to use for WAN connectivity. Which of the following best describes the layer the network engineer should connect the new router to?

- A. Leaf
- B. Access
- C. Spine
- D. Core

정답: A

설명:

Comprehensive and Detailed Explanation (paraphrased, aligned to N10-009):

In a spine-leaf architecture, endpoints (including servers, firewalls, and WAN/edge routers) connect to leaf switches. Leaf switches then uplink to spine switches; spine switches do not have endpoints connected directly to them. Therefore, a WAN router (an external/edge device) should connect to the leaf layer—often specifically to a "border leaf" that handles external connectivity.

Why not B. Core or D. Spine? In spine-leaf, "core" isn't a formal layer, and spines are designed only to interconnect leafs, not to terminate endpoints.

Why not A. Access? "Access" is a term from the traditional three-tier model (access-distribution-core). In modern spine-leaf language, the analogous layer for endpoint attachment is the leaf.

Reference (CompTIA Network+ N10-009):

질문 # 379

Which of the following source control features allows an administrator to test a new configuration without changing the primary configuration?

- A. Central repository
- B. Version control
- C. Branching
- D. Conflict identification

정답: C

설명:

Branching allows developers and administrators to create an isolated copy of the main configuration so they can test changes independently. This avoids impacting the primary environment and allows for safer testing and development.

An organization has a security requirement that all network connections can be traced back to a user. A network administrator needs to identify a solution to implement on the wireless network. Which of the following is the best solution?
