

Exam CCCS-203b Forum, CCCS-203b Exam Passing Score

DOWNLOAD the newest ITCertMagic CCCS-203b PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1mrh8kabbpvEJqgpfFYqTSmo4pdsxQvOm>

We recognize that preparing for the CrowdStrike Certification Exams can be challenging, and that's why we provide CrowdStrike CCCS-203b practice material with three formats that take your individual needs into account. Our team of experts is dedicated to helping you succeed by providing you with the support you need while using the product.

CrowdStrike CCCS-203b Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Falcon Cloud Security Features and Services: This domain covers understanding CrowdStrike's cloud security products (CSPM, CWP, ASPM, DSPM, IaC security) and their integration, plus one-click sensor deployment and Kubernetes admission controller capabilities.
Topic 2	<ul style="list-style-type: none">Pre-Runtime Protection: This domain covers managing registry connections, selecting image assessment methods, and analyzing assessment reports to identify malware, CVEs, leaked secrets, Dockerfile misconfigurations, and vulnerabilities before deployment.
Topic 3	<ul style="list-style-type: none">Remediating and Reporting Issues: This domain addresses identifying remediation steps for findings, using scheduled reports for cloud security, and utilizing Falcon Fusion SOAR workflows for automated notifications.

Actual CCCS-203b : CrowdStrike Certified Cloud Specialist Exam Dumps Questions Is Easy to Understand - ITCertMagic

.CrowdStrike CCCS-203b exam dumps are important because they show you where you stand. After learning everything related to the CrowdStrike Certified Cloud Specialist (CCCS-203b) certification, it is the right time to take a self-test and check whether you can clear the CrowdStrike Certified Cloud Specialist (CCCS-203b) certification exam or not. People who score well on the CrowdStrike Certified Cloud Specialist (CCCS-203b) practice questions are ready to give the final CrowdStrike Certified Cloud Specialist (CCCS-203b) exam. On the other hand, those who do not score well can again try reading all the CrowdStrike Certified Cloud Specialist (CCCS-203b) dumps questions and then give the CCCS-203b exam.

CrowdStrike Certified Cloud Specialist Sample Questions (Q185-Q190):

NEW QUESTION # 185

What is the primary benefit of using automated remediation in a cloud security workflow?

- A. Ensuring compliance with industry regulations without manual checks
- B. Increasing cloud environment performance by optimizing resource utilization
- **C. Reducing response time by taking immediate action on detected threats**
- D. Eliminating the need for human oversight during incident response

Answer: C

Explanation:

Option A: Automated remediation complements, but does not replace, human oversight. Security teams still need to review actions, analyze complex incidents, and refine policies to ensure proper functionality.

Option B: While automated remediation can support compliance by addressing security gaps promptly, it does not fully replace manual checks, audits, or detailed compliance reviews.

Option C: Automated remediation is focused on security incident response, not resource optimization. While securing the environment may have indirect performance benefits, this is not the primary goal.

Option D: The primary advantage of automated remediation is its ability to act quickly and mitigate threats as soon as they are detected, significantly reducing response time. This minimizes the potential impact of threats by containing them before they can escalate or cause further damage.

NEW QUESTION # 186

What is one purpose of the CrowdStrike Kubernetes Admission Controller?

- **A. Monitors and enforces security policies in any containerized environment**
- B. Forwards Kubernetes event logs to CrowdStrike NG SIEM
- C. Provides security visibility into EKS, AKS, and self-managed clusters

Answer: A

Explanation:

The CrowdStrike Kubernetes Admission Controller is a pre-runtime security control designed to enforce security policies before workloads are allowed to run in a Kubernetes environment. Its primary purpose is to monitor and enforce security policies in any containerized environment by intercepting Kubernetes API requests at admission time.

When a deployment, pod, or container is submitted to the Kubernetes API server, the Admission Controller evaluates the request against Falcon Cloud Security policies. These policies can include rules related to image risk posture, vulnerabilities, malware presence, secrets, or compliance violations. If an image violates defined policies, the Admission Controller can block the deployment, preventing insecure or non-compliant workloads from entering the cluster.

This capability is critical for implementing a shift-left security model, ensuring that threats are stopped before runtime, rather than detected after execution. While Falcon also provides runtime protection and visibility across managed Kubernetes platforms such as EKS and AKS, those capabilities are not the primary function of the Admission Controller itself.

The Admission Controller does not forward Kubernetes logs to SIEM platforms; instead, it acts as an enforcement gate. Therefore, the correct answer is **Monitors and enforces security policies in any containerized environment**.

NEW QUESTION # 187

Which feature of Falcon Horizon allows users to identify exposed cloud services and workloads running without requiring the deployment of a Falcon sensor?

- A. Deployment of lightweight monitoring agents
- **B. API-driven cloud workload discovery**
- C. Vulnerability patching orchestration
- D. Real-time behavioral monitoring

Answer: B

Explanation:

Option A: Patching orchestration is not part of Falcon Horizon's functionality. It focuses on remediation rather than workload discovery or runtime protection.

Option B: While lightweight monitoring agents can provide visibility, this contradicts the requirement of finding workloads without deploying a Falcon sensor. Falcon Horizon's agentless approach eliminates this dependency.

Option C: Real-time behavioral monitoring is a feature of Falcon modules like Falcon Prevent or Falcon Insight, which require sensors to monitor and analyze workload behavior. This is not applicable to environments without sensor deployment.

Option D: Falcon Horizon uses API-driven cloud workload discovery to analyze the state of resources in the cloud environment. By leveraging APIs provided by cloud service providers, Falcon Horizon gathers data on running workloads, exposed services, and misconfigurations without needing to deploy agents or sensors on individual workloads. This approach is efficient and does not require intrusive installation processes.

NEW QUESTION # 188

What is the most appropriate first step when creating a Falcon Fusion workflow to notify individuals about automated remediation actions?

- A. Manually send an email notification to the security team.
- B. Create a custom dashboard to visualize all remediation events.
- C. Set up a trigger event for the workflow, such as a detection in the Falcon platform.
- D. Add a conditional step to verify if the action is approved by an administrator.

Answer: C

Explanation:

Option A: The first step in creating a Falcon Fusion workflow is to define the trigger event that initiates the workflow. This could be a specific detection type or another event in the Falcon platform. Without a trigger, the workflow has no starting point. This step ensures that the workflow activates only in response to the desired conditions.

Option B: While notifying the security team is important, manually sending emails defeats the purpose of automating workflows with Falcon Fusion. Automation is designed to streamline the response process and reduce human intervention.

Option C: Adding conditional steps for approval might be part of the workflow, but it is not the first step. Conditional logic is applied after the workflow is triggered. Focusing on triggers first is essential.

Option D: While dashboards are useful for monitoring, they are not part of creating workflows.

Dashboards visualize outcomes, whereas workflows focus on defining triggers and actions.

NEW QUESTION # 189

While investigating an alert in the CrowdStrike Falcon platform, you discover a registry key modification in HKCU\Software\Microsoft\Windows\CurrentVersion\Run referencing a newly created executable in the user's AppData\Roaming directory.

What does this likely indicate?

- A. An update to a legitimate application stored in the AppData directory.
- B. A routine application installation adding itself for automatic startup.
- C. A harmless system optimization script configured to run on boot.
- D. A malicious persistence mechanism designed to execute malware at startup.

Answer: D

Explanation:

Option A: The HKCU\Software\Microsoft\Windows\CurrentVersion\Run registry key is a common persistence mechanism used by malware. The presence of a new executable in the AppData\Roaming directory is particularly suspicious, as this directory is often exploited by attackers to store malicious files. Further investigation is necessary to analyze the executable and mitigate the threat.

Option B: System optimization scripts rarely require registry modifications for persistence and are generally stored in predefined system directories, not AppData. The context points more toward malicious activity.

Option C: While some applications use AppData for updates, they generally overwrite existing files rather than create new executables with corresponding registry entries. Validate this scenario against update logs and application behavior.

Option D: Legitimate applications may add entries to this registry key, but these are typically well-documented and located in program directories, not AppData\Roaming. The context of the directory and newly created executable makes this explanation less likely.

NEW QUESTION # 190

.....

Comparing to other training classes, our CCCS-203b dumps pdf can not only save you lots of time and money, but also guarantee you pass exam 100% in your first attempt. Our test engine enjoys great popularity among the dumps vendors because it allows you practice our CCCS-203b Real Questions like the formal test anytime. We will offer you one-year free update CCCS-203b braindumps after one-year.
