Our study materials can help you to solve all the problems encountered in the learning process, so that you can easily pass the exam.

Palo Alto Networks System Engineer - Cortex Professional Sample Questions (Q133-Q138):

NEW QUESTION # 133

A Cortex XSOAR customer wants to ingest from a single mailbox. The mailbox brings in reported phishing emails and email requests from human resources (HR) to onboard new users. The customer wants to run two separate workflows from this mailbox, one for phishing and one for onboarding. What will allow Cortex XSOAR to accomplish this in the most efficient way?

- A. Create two instances of the email integration and classify one instance as ingesting incidents of type phishing and the other as ingesting incidents of type boarding
- B. Create a playbook to process and determine incident type based on content of the email

- C. Use an incident classifier based on field in each type of email to classify those containing "Phish Alert" in the subject as phishing and those containing "Onboard Request" as onboarding
- D. Use machine learning (ML) to determine incident type

Answer: C

NEW QUESTION # 134

Why is reputation scoring important in the Threat Intelligence Module of Cortex XSOAR?

- A. It deconflicts prioritization when two vendors give different scores for the same indicator.
- B. It allows for easy comparison between open-source intelligence and paid services.
- C. It provides a mathematical model for combining scores from multiple vendors.
- D. It helps identify threat intelligence vendors with substandard content.

Answer: A

NEW QUESTION # 135

A customer is hesitant to directly connect their network to the Cortex platform due to compliance restrictions.

Which deployment method should the customer use to ensure secure connectivity between their network and the Cortex platform?

- A. Elasticsearch
- B. Broker VM
- C. Syslog collector
- D. Windows Event Collector

Answer: B

Explanation:

To ensure secure connectivity between the customer's network and the Cortex platform while adhering to compliance restrictions, the customer should use the Broker VM. The Broker VM acts as a secure intermediary between the local network and the Cortex platform, allowing for controlled and encrypted communication without directly exposing the network to the platform.

NEW QUESTION # 136

An existing Palo Alto Networks SASE customer expresses that their security operations practice is having difficulty using the SASE data to help detect threats in their environment. They understand that parts of the Cortex portfolio could potentially help them and have reached out for guidance on moving forward.

Which two Cortex products are good recommendation for this customer? (Choose two.)

- A. Cortex XSOAR
- B. Cortex XSIAM
- C. Cortex Xpanse
- D. Cortex XDR

Answer: A,D

NEW QUESTION # 137

Which task setting allows context output to a specific key?

- A. stop on errors
- B. lags
- C. task output
- D. extend context

Answer: D

Explanation:
