## 試験の準備方法-有難いC\_DBADM\_2601日本語版問題解説試験-真実的なC\_DBADM\_2601合格内容

JPNTTestはSAPのC\_DBADM\_2601「SAP Certified - Database Administrator - SAP HANA」試験に関する完全な資料を唯一のサービスを提供するサイトでございます。JPNTTestが提供した問題集を利用してSAPのC\_DBADM\_2601試験は全然問題にならなくて、高い点数で合格できます。SAP C\_DBADM\_2601試験の合格のために、JPNTTestを選択してください。

## SAP Certified - Database Administrator - SAP HANA 認定 C\_DBADM\_2601 試験問題 (Q76-Q81):

### 質問 # 76

A regional scientific instruments company is planning an incremental migration rehearsal from SAP HANA on-premises to SAP HANA Cloud. The source system export completes, and the cloud target is reachable in database explorer. Before import approval, the administrator discovers that the migration worksheet records the target connection test but does not record whether the target administration baseline was captured before loading migrated data. The project lead wants to continue because target access is confirmed.

The constraint is that the rehearsal must preserve a clean before-and-after comparison for the cloud target. The team must be able to distinguish pre-import target readiness from post-import migrated-state validation.

- A. Continue with import because database explorer confirms the SAP HANA Cloud target is reachable.
- **B. Capture the target administration baseline before import, then record post-import validation separately for the migrated state.**
- C. Defer the target baseline until after import because the migrated state is the only state that matters for approval.
- D. Repeat the source export because missing target baseline evidence means the source data is unreliable.

正解: B

解説:

Feedback:

This resolves the migration validation sequencing gap. Capturing the pre-import administration baseline and recording post-import evidence separately aligns target readiness, import execution, migrated-state validation, and repeatable migration controls.

質問 # 77

CHALLENGE 1 - UAT Configuration Evidence Reconciliation

A database administrator proposes accepting the UAT comparison now and adding a note that one configuration value was documented outside the current record. Which response is most defensible?

- A. Move the value review to the cloud migration workstream to avoid release delay.
- B. Ignore the note because the release note already proves the configuration is approved.
- C. Require the current administration record to reflect the active value before comparison acceptance.
- D. Accept the note because it acknowledges the difference without delaying UAT.

正解: C

解説:

Feedback:

The current administration record should reflect the active value before the comparison is accepted. A note may identify the evidence source, but it does not replace an aligned operational record.

質問 # 78

CHALLENGE 4 - Service Continuity Recovery Gate

The service lead can accept hypercare readiness on schedule using backup completion evidence, or delay briefly to include recovery validation for the stabilization database and recoverability evidence for the upgraded system. Which path is most defensible?

- A. Delay briefly to complete recoverability evidence for systems supporting the readiness package.
- B. Accept on schedule and attach recovery validation to the future SAP HANA Cloud migration plan.
- C. Accept on schedule because meeting the service review date is the strongest governance outcome.
- D. Cancel the readiness decision because recovery validation was not completed before testing began.

正解: A

解説:

Feedback:

A brief delay is most defensible because it completes recoverability evidence for systems supporting the readiness package. This balances schedule governance with operational resilience evidence.

質問 # 79

A regional food processing company is rehearsing migration from SAP HANA on-premises to SAP HANA Cloud. The source export completes, and the cloud target is reachable. During validation, the administrator sees that the source database continued receiving administrative test updates after the export timestamp, while the target checks are being compared against the current source state. The project lead wants approval because the cloud target can be queried successfully.

The constraint is that the migration rehearsal must prove the transferred state against the correct source point. The team must support phased modernization without confusing post-export source changes with migration failure.

Which action should the administrator recommend?

- A. Approve the rehearsal because the SAP HANA Cloud target is reachable and can be queried.
- B. Treat the validation mismatch as proof that SAP HANA Cloud is not ready for this migration wave.
- C. Validate the target against the recorded export point, document post-export source changes separately, and rerun comparison using the correct baseline.
- D. Repeat the export immediately without recording the source point because a fresh transfer removes the comparison issue.

正解: C

解説:

Feedback:

This resolves the comparison baseline issue at the migration validation layer. Using the recorded export point and separating later source changes confirms that source state, transfer evidence, target validation, and modernization decision logic are aligned.

### 質問 # 80

#### CHALLENGE 2 - Restoration Simulation Monitoring Baseline

A performance specialist suggests applying tuning before preserving baseline evidence because the second UAT run needs better response time. The database owner is concerned about later release comparison. Which decision is most appropriate?

- A. Apply tuning first and document the original baseline as unavailable.
- B. Cancel the second UAT run until all performance variability is eliminated.
- C. Preserve the current baseline, then document any tuning as a controlled follow-on change.
- D. Use SAP HANA Cloud test results to replace on-premises monitoring evidence.

正解: C

解説:

Feedback:

The current baseline should be preserved before tuning is documented as a controlled follow-on change. This keeps release comparison evidence understandable while still allowing performance improvement when justified.

### 質問 # 81
