Confluent Certified Administrator for Apache Kafka Sample Questions (Q17-Q22):

NEW QUESTION # 17

If the Controller detects the failure of a broker that was the leader for some partitions, which actions will be taken? (Choose two.)

- A. The Controller waits for a new leader to be nominated by ZooKeeper.
- **B. The Controller persists the new leader and ISR list to ZooKeeper.**
- **C. The Controller sends the new leader and ISR list changes to all brokers.**
- D. The Controller sends the new leader and ISR list changes to all producers and consumers.

Answer: B,C

Explanation:

The Controller updates ZooKeeper with the new leader and in-sync replica (ISR) information to maintain metadata consistency. Brokers need this information to correctly route client requests and continue replication.

NEW QUESTION # 18

By default, what do Kafka broker network connections have?

- A. No encryption, no authorization, but have authentication
- B. Encryption, but no authentication or authorization
- C. Encryption and authentication, but no authorization
- **D. No encryption, no authentication and no authorization**

Answer: D

Explanation:

By default, Kafka brokers use the PLAINTEXT protocol for network communication. This means:

* No encryption - data is sent in plain text.

* No authentication - any client can connect without verifying identity.

* No authorization - there are no access control checks by default.

Security features like TLS, SASL, and ACLs must be explicitly configured.

NEW QUESTION # 19

What is the correct permission check sequence for Kafka ACLs?

What is the correct permission check sequence for Kafka ACLs?

- **A. Super Users -> Allow ACL -> Deny ACL -> Deny**
- B. Deny ACL -> Deny -> Allow ACL -> Super Users
- C. Super Users -> Deny ACL -> Allow ACL -> Deny
- D. Allow ACL -> Deny ACL -> Super Users -> Deny

Answer: A

Explanation:

Kafka checks permissions in the following sequence:

1. Super Users: If the user is a super user (defined via super.users), access is granted immediately.

2. Allow ACL: If there is a matching Allow ACL, Kafka proceeds to the next step.

3. Deny ACL: If there is a matching Deny ACL, access is denied (even if an Allow exists).

4. Deny: If no matching ACLs are found, access is denied by default.

This order ensures that super users bypass ACLs, denials override allows, and default is deny.

NEW QUESTION # 20

Your Kafka cluster has four brokers. The topic t1 on the cluster has two partitions, and it has a replication factor of three. You create a Consumer Group with four consumers, which subscribes to t1.

In the scenario above, how many Controllers are in the Kafka cluster?

- A. Four
- B. three
- C. One
- D. two

Answer: C

Explanation:

In a Kafka cluster, only one broker acts as the Controller at any given time. The Controller is responsible for managing cluster metadata, such as partition leadership and broker status. Even if the cluster has multiple brokers (in this case, four), only one is elected as the Controller, and others serve as regular brokers. If the current Controller fails, another broker is automatically elected to take its place.

NEW QUESTION # 21

What does Kafka replication factor provide? (Choose two.)

- A. Performance
- B. Durability
- C. Availability
- D. Security

Answer: B,C

Explanation:

Replication ensures that multiple copies of data exist across different brokers, so data is not lost if one broker fails. With multiple replicas, Kafka can continue to serve data even if the leader or one replica fails, maintaining service availability.

NEW QUESTION # 22

.....

We always learned then forget, how to solve this problem, the answer is to have a good memory method, our CCAAK exam question will do well on this point. Our CCAAK real exam materials have their own unique learning method, abandon the traditional rote learning, adopt diversified memory patterns, such as the combination of text and graphics memory method, to distinguish between the memory of knowledge. Our CCAAK learning reference files are so scientific and reasonable that you can buy them safely.
