最新的 Oracle Cloud 1Z0-1133-24 免費考試真題 (Q71-Q76):

問題 #71

Which of the following can be used to identify performance bottlenecks in data integration jobs?

- A. Reviewing detailed job logs
- B. Creating additional financial reports
- C. Increasing user permissions
- D. Automating data validation rules

答案： A

解題說明：

Reviewing detailed job logs helps identify specific points in the data integration process where performance bottlenecks may occur, such as slow data transformation or loading steps.

問題 #72

When running a data load through the EPM Integration Agent, which of the following is required for ensuring successful data validation?

- A. Creating batch jobs for regular data load
- B. Scheduling the load for non-peak times
- C. Establishing a drill-through connection
- D. Reviewing logs in the workbench

答案： D

解題說明：

Reviewing the logs in the workbench helps identify any issues or errors that occurred during the data load process, ensuring the data has been validated successfully.

問題 #73

Which of the following must be done when modifying a pipeline to accommodate new data sources?

- A. Change the period mapping settings
- B. Disable user access to the pipeline
- C. Add new steps to the pipeline for the new data source
- D. Reconfigure the financial reporting templates

答案： C

解題說明：

When modifying a pipeline to accommodate new data sources, new steps must be added to the pipeline to handle the new data source properly.

問題 #74

Which of the following is a best practice for optimizing data integration jobs in Oracle Cloud EPM?

- A. Running the jobs during off-peak hours to reduce resource contention
- B. Increasing the number of users accessing the system
- C. Adding additional transformation steps to the process
- D. Disabling validation for each data load

答案： A

解題說明：

Running data integration jobs during off-peak hours helps reduce resource contention, improving performance by allowing the job to use more system resources.

問題 #75

Which of the following is a key requirement when running a pipeline in Oracle Cloud EPM?

- A. Assigning user roles to the data source
- B. Manually transforming the data before the pipeline runs
- C. Ensuring the source and target systems are correctly configured
- D. Configuring financial reports for each job

答案： C

解題說明：

Ensuring that the source and target systems are correctly configured is essential before running a pipeline, as it ensures that the data can be transferred and processed successfully.
