Our professional online service are pleased to give guide in 24 hours.

### **Salesforce Health Cloud Accredited Professional Sample Questions (Q38-Q43):**

#### **NEW QUESTION # 38**

Which is true about choosing a care request type when setting up a new care request record?

- A. Multiple care request types can be chosen for a single care request.
- B. A care request type cannot be chosen when creating a new care request.
- **C. A case record type can be chosen to identify a single care request type for each care request.**
- D. Any case record type can be chosen when creating care request.

**Answer: C**

Explanation:

According to the Salesforce documentation<sup>3</sup>, when setting up a new care request record, you need to choose a case record type to identify the care request type. The care request type determines what fields and values are available on the care request record. There are four predefined care request types in Health Cloud: Physician Request, Drug Request, Admission Request, and Appeal Request. You can also create custom care request types to suit your business needs<sup>3</sup>.

#### **NEW QUESTION # 39**

A customer wants to view a patient's health conditions and clinical encounters as a sequence of events happening over time on the patient's Person Account page.

What should a consultant do to achieve this using the Enhanced Timeline functionality?

- **A. Create a new Timeline View Configuration record.**
- B. Add a record to the HealthCloudTimelineConfig custom setting.
- C. Create a new Timeline record within Setup.
- D. Clone the HCTimeline FlexCard for customization.

**Answer: A**

Explanation:

Enhanced Timeline Functionality:

\* The Enhanced Timeline in Health Cloud displays a sequence of clinical events (e.g., health conditions and encounters) on a patient's Person Account.

\* Exact Extract:

"To configure the Enhanced Timeline component to show custom event types and adjust the event display, create a Timeline View Configuration record." Reference: Administer Health Cloud - Enhanced Timeline Other Options:

Timeline records within Setup and HealthCloudTimelineConfig custom settings are not how the Enhanced Timeline is configured for new event views.

Cloning the HCTimeline FlexCard is not required or recommended for this configuration.

#### NEW QUESTION # 40

A Salesforce administrator is migrating a Service Cloud org to Health Cloud and is considering using the Health Cloud Provider data model. Which approach should the administrator take if the Custom Provider Search Lightning component is to be used?

- **A. The current data model with the existing component can be used as well as the Provider data model with either custom search component or the Health Cloud Provider Search component.**
- B. If the Provider data model is used, the standard Health Cloud Provider Search component must be used or extended. Custom search components are not supported.
- C. The Standard Health Cloud Provider Search component can be used to search either the Health Cloud Provider data model or a custom Provider data model.
- D. The Provider data model is required for all Service Cloud to Health Cloud migrations, but either the standard or custom search components may be used.

**Answer: A**

Explanation:

According to the Salesforce documentation<sup>1</sup>, the Health Cloud Provider data model is an optional data model that can be used to represent providers and their relationships in Health Cloud. It is not required for all Service Cloud to Health Cloud migrations, and it can coexist with the existing data model. The Custom Provider Search Lightning component is a custom component that can be used to search for providers using any data model, including the Health Cloud Provider data model or a custom provider data model. The Health Cloud Provider Search component is a standard component that can be used to search for providers using the Health Cloud Provider data model only. It can be extended or customized, but not replaced by a custom component<sup>1</sup>.

#### NEW QUESTION # 41

Bloomington Caregivers has been using the legacy Health Cloud electronic health record (EHR) data model and wants to move to the FHIR R4 clinical data model.

Which two steps should a consultant take to complete this?

Choose 2 answers

- **A. Map objects and Fields to the target objects.**
- **B. Use the Health Cloud Clinical Transition tool.**
- C. Use Data Loader to load the respective data.
- D. Leverage the Health Cloud FHIR API.

**Answer: A,B**

Explanation:

Bloomington Caregivers is transitioning from the legacy Health Cloud Electronic Health Record (EHR) data model to the FHIR R4-aligned Clinical Data Model. This migration enhances interoperability and aligns with current healthcare data standards. The following steps are essential for a successful transition:

\* Utilize the Health Cloud Clinical Transition Tool (Answer A):

\* Purpose: Salesforce provides the Health Cloud Clinical Transition tool to facilitate the migration from the legacy EHR data model to the FHIR R4-aligned Clinical Data Model.

\* Functionality: This tool automates the migration process by mapping legacy EHR objects to their corresponding FHIR R4-aligned Clinical Data Model objects, ensuring data integrity and consistency.

\* Implementation Steps:

\* Preparation: Review existing data to identify the scope of migration and ensure data quality.

\* Execution: Run the Clinical Transition tool to perform the automated mapping and data migration.

\* Validation: Verify the migrated data to ensure accuracy and completeness.

Reference: For detailed guidance on using the Clinical Transition tool, refer to Salesforce's official documentation: Replacing the EHR Data Model with the Clinical Data Model.

Map Objects and Fields to the Target Objects (Answer C):

Purpose: Accurate mapping of legacy EHR objects and fields to the new Clinical Data Model is crucial for maintaining data integrity and ensuring seamless integration with other healthcare systems.

Implementation Steps:

Analysis: Identify all legacy EHR objects and fields that require migration.

Mapping: Determine the corresponding objects and fields in the FHIR R4-aligned Clinical Data Model.

Configuration: Set up the mappings within Salesforce, ensuring that data flows correctly into the new model.

Reference: Salesforce provides a comprehensive guide on mapping FHIR resources to Salesforce standard objects: Mapping FHIR v4.0 to Salesforce Standard Objects.

Additional Considerations:

Data Loader Usage (Answer B):

While Data Loader is a powerful tool for bulk data operations, it is not specifically designed for complex data model transitions like this. Using the Clinical Transition tool is recommended for its specialized capabilities in handling such migrations.

Leveraging the Health Cloud FHIR API (Answer D):

The Health Cloud FHIR API is intended for integrating external systems with Salesforce using FHIR standards. It is not designed for internal data model migrations. Therefore, it is not applicable in this context.

Conclusion:

By utilizing the Health Cloud Clinical Transition tool and meticulously mapping objects and fields to the target FHIR R4-aligned Clinical Data Model, Bloomington Caregivers can achieve a seamless and efficient migration, enhancing data interoperability and aligning with modern healthcare standards.

## NEW QUESTION # 42

Which three of the following features are included with a Health Cloud License?

- A. Intelligent Document Automation
- B. Surveys
- C. Intelligent Form Reader with Amazon Textract
- D. Care Coordination(Patient Services)
- E. EHR Mulesoft Templates

Answer: A,B,C
