- C. Failover with Sync, Sync
- **D. Failover, Resume**

Answer: D

NEW QUESTION # 57

When is it safe to swap a Storage Processor (SP) when performing a Data in Place upgrade?

- A. SP fault and power lights on both SPs are solid amber
Amber fault LEDs on both power supplies are off
- B. SP fault and power lights on both SPs are off
Amber fault LEDs on both power supplies are off
- C. SP fault and power lights on both SPs are blinking at 1Hz
Amber fault LEDs on both power supplies are lit
- **D. SP fault and power lights on both SPs are off
Amber fault LEDs on both power supplies are lit**

Answer: D

NEW QUESTION # 58

What is the result of enabling Data Reduction on a LUN in a consistency group containing three LUNs?

- **A. All writes to all consistency group LUNs will go through the Data Reduction logic.**
- B. Data Reduction will be enabled on all LUNs in the consistency group.
- C. Data Reduction and Advanced Deduplication will be enabled on all LUNs.
- D. Any writes to the LUN will go through the Data Reduction logic.

Answer: A

Explanation:

Explanation

Data Reduction is a feature that reduces the amount of physical storage space required to store user data on a LUN. Data Reduction is enabled at the LUN level and applies to all the data in the LUN, including snapshots and thin clones. Data Reduction consists of two components: compression and deduplication. Compression reduces the size of data blocks by removing redundant information, while deduplication eliminates duplicate blocks across the LUN. When Data Reduction is enabled on a LUN, all writes to the LUN will go through the Data Reduction logic before being written to the storage pool. If the LUN is part of a consistency group, Data Reduction will be enabled on all the LUNs in the consistency group, and all writes to any LUN in the group will go through the Data Reduction logic. This ensures that the data in the consistency group is consistent and protected by the same Data Reduction settings. References:
