

# New Huawei H20-923\_V1.0 Exam Testking, H20-923\_V1.0 Braindumps Torrent

Huawei H20-923\_V1.0 frequently changes the content of the HCSP-Field-Data Center Facility V1.0 (H20-923\_V1.0) exam. Therefore, to save your valuable time and money, we keep a close eye on the latest updates. Furthermore, ExamTorrent also offers free updates of H20-923\_V1.0 exam questions for up to 365 days after buying HCSP-Field-Data Center Facility V1.0 (H20-923\_V1.0) dumps. We guarantee that nothing will stop you from earning the esteemed Huawei Certification Exam on your first attempt if you diligently prepare with our H20-923\_V1.0 real exam questions.

Buy Huawei H20-923\_V1.0 preparation material from a trusted company such as ExamTorrent. This will ensure you get updated Huawei H20-923\_V1.0 study material to cover everything before the big day. Practicing for an HCSP-Field-Data Center Facility V1.0 (H20-923\_V1.0) exam is one of the best ways to ensure success. It helps students become familiar with the format of the actual H20-923\_V1.0 Practice Test. It also helps to identify areas where more focus and attention are needed. Furthermore, it can help reduce the anxiety and stress associated with taking an HCSP-Field-Data Center Facility V1.0 (H20-923\_V1.0) exam as it allows students to gain confidence in their knowledge and skills.

## H20-923\_V1.0 Braindumps Torrent | Real H20-923\_V1.0 Exam Dumps

Facing the incoming Huawei H20-923\_V1.0 Exam, you may feel stained and anxious, suspicious whether you could pass the exam smoothly and successfully. Actually, you must not impoverish your ambition. Our suggestions are never boggle at difficulties. It is your right time to make your mark.

### Huawei HCSP-Field-Data Center Facility V1.0 Sample Questions (Q61-Q66):

#### NEW QUESTION # 61

For hourly statistics reports, data of up to how many days can be queried? For monthly statistics reports, data of up to how many years can be queried?

- A. 0
- B. 1
- C. 2
- **D. 3**

**Answer: D**

Explanation:

In Huawei NetEco statistical reporting, the query range is constrained by the report data retention policy and how summary data is stored. For hourly statistics, the platform keeps a limited window of high-granularity data to balance storage consumption and performance. The hourly report retention is 120 hours, which equals 5 days. That is why hourly statistics queries are limited to 5 days-

beyond that window, hourly granularity is no longer retained in the report database for direct querying. For longer time horizons, NetEco relies on lower- granularity summaries (daily/weekly/monthly/yearly). For monthly statistics, the platform supports long-term trend analysis and KPI tracking, and the maximum historical horizon aligns with the long-term statistics retention boundary used by NetEco reporting, which is up to 5 years. This design ensures fast query response, manageable database growth, and clear separation between short-term operational detail (hourly) and long- term management analysis (monthly/yearly).

#### NEW QUESTION # 62

Which of the following is the cabling mode of external power cables in IT scenarios of the FusionDC1000A?

- A. Bottom cabling
- B. End door cabling
- C. Top cabling
- D. End wall cabling

**Answer: A**

Explanation:

In the FusionDC1000A IT scenario, the external input power cables are designed to enter the power distribution system through dedicated cable inlets at the bottom of the Power PDB. During installation, the procedure requires opening the Power PDB, removing the plugs from the bottom cable holes, and routing the external input power cables into the cabinet through these bottom entries before arranging them along the nearby cable support/bridge inside the Power PDB area. After the cables are terminated (for example, L1/L2 /L3/N and PE), the bottom cable entries are resealed using waterproof sealing materials to maintain enclosure protection performance. This bottom-entry method supports reliable mechanical routing for thick/armored power cables, reduces bending stress, helps maintain orderly segregation from signal cabling, and improves on-site safety by guiding high-current cables through a controlled inlet path. Therefore, the correct cabling mode for external power cables in FusionDC1000A IT scenarios is bottom cabling.

#### NEW QUESTION # 63

The frequency of power supply equipment can be 50 Hz, 60 Hz, or 70 Hz.

- A. True
- B. False

**Answer: B**

Explanation:

In data center power systems, the utility grid frequency standard is either 50 Hz or 60 Hz, depending on the country/region. Data center facility equipment—such as UPS systems, power distribution units, switchgear, and monitoring components—is designed to operate reliably under these standardized grid frequencies, with acceptable tolerance ranges around the nominal value. While some power conversion equipment can adapt between 50/60 Hz (for example, via frequency tracking or double-conversion), 70 Hz is not a standard utility frequency used for data center facility power supply, and it is not treated as a normal operating frequency in typical design, acceptance testing, or O&M procedures. From an operations perspective, maintaining correct frequency is critical because abnormal frequency can trigger UPS transfer logic, increase losses, create synchronization issues with bypass sources, and negatively affect downstream IT loads. Therefore, stating that power supply equipment frequency "can be 50 Hz, 60 Hz, or 70 Hz" is incorrect for standard data center infrastructure practice.

#### NEW QUESTION # 64

After the battery module is installed, the torque and insulation should be checked according to the specified requirements.

- A. False
- B. True

**Answer: B**

Explanation:

This statement is true because post-installation verification is a mandatory acceptance step for battery systems in data centers. After a battery module is installed, torque verification ensures that all power terminals, interconnect bars, and grounding points meet the

specified tightening requirements. If torque is too low, contact resistance increases, which can cause abnormal heating, voltage drop, nuisance alarms, and even connector damage during high current charge/discharge. If torque is too high, threads, lugs, or busbars can be damaged, creating hidden reliability risks. Insulation testing confirms that the battery circuit has no unintended leakage paths to chassis or ground and that cable routing, connector seating, and protective covers are correct.

This is especially important for lithium battery cabinets where high DC voltage and large fault current capability demand strict electrical isolation. Performing torque and insulation checks after installation reduces early-life faults, improves safety, and ensures the cabinet can pass commissioning tests and enter stable service under UPS charge/discharge control.

#### NEW QUESTION # 65

Which of the following models is a Huawei in-room chilled water horizontal air supply product?

- A. NetCol5000-A070U
- B. NetCol8000-C070D
- C. FusionCol8000-C210H
- **D. FusionCol5000-A050H**

**Answer: D**

Explanation:

Huawei room-level air conditioning products are commonly identified by the series name plus a model suffix that indicates the cooling medium and airflow form factor. An in-room chilled water unit uses a chilled-water coil as the primary heat-exchange component and relies on the building's chilled-water system (chiller/plant) rather than an onboard refrigeration compressor for cooling generation. "Horizontal air supply" describes the discharge direction: the unit supplies conditioned air laterally into the room or into a specific airflow organization (such as cold-aisle delivery), supporting predictable airflow paths and stable return air conditions. Within the provided options, FusionCol5000-A050H is the model that matches both identifiers: it belongs to Huawei's room cooling product line and the model code indicates an in-room configuration with chilled-water capability and horizontal air supply orientation. The other options belong to different series or represent configurations typically associated with other deployment forms (such as different placement, airflow direction, or system architecture). Therefore, the correct selection is FusionCol5000-A050H.

#### NEW QUESTION # 66

.....

There are many benefits after you pass the H20-923\_V1.0 certification such as you can enter in the big company and double your wage. Our H20-923\_V1.0 study materials boost high passing rate and hit rate so that you needn't worry that you can't pass the test too much. We provide free tryout before the purchase to let you decide whether it is valuable or not by yourself. To further understand the merits and features of our H20-923\_V1.0 Practice Engine you could look at the introduction of our product in detail on our website.
