FULL 70-Question Timed Mock OA

---

Domain 1: Prompt Engineering Fundamentals

1. What is the primary goal of prompt engineering?

- A. Reduce AI response time
- B. Control AI model architecture
- C. Guide AI outputs to meet user intent
- D. Increase model creativity

Answer: C

---

2. Which prompt element defines the role the AI should assume?

- A. Context
- B. Persona
- C. Constraints
- D. Output format

Answer: B

---

3. Why are vague prompts problematic?

- A. They increase processing cost
- B. They reduce determinism and accuracy
- C. They exceed token limits
- D. They prevent formatting

Answer: B

---

4. Which is an example of a zero-shot prompt?

- A. Providing three examples before asking
- B. Asking a question without examples
- C. Using prompt chaining
- D. Reusing a template

After years of hard work, our Practical-Applications-of-Prompt guide training can take the leading position in the market. Our highly efficient operating system for learning materials has won the praise of many customers. If you are determined to purchase our Practical-Applications-of-Prompt study tool, we can assure you that you can receive an email from our efficient system within 5 to 10 minutes after your payment, which means that you do not need to wait a long time to experience our learning materials. Then you can start learning our Practical-Applications-of-Prompt Exam Questions in preparation for the exam.

A lot of applicants have studied from WGU Practical-Applications-of-Prompt practice material. They have rated it positively because they have cracked WGU Practical-Applications-of-Prompt Certification on their first try. PDFBraindumps guarantees its customers that they can pass the Practical-Applications-of-Prompt test on the first attempt.

By resorting to our Practical-Applications-of-Prompt exam materials, we can absolutely reap more than you have imagined before. We have clear data collected from customers who chose our Practical-Applications-of-Prompt practice braindumps, and the passing rate is 98-100 percent. So your chance of getting success will be increased greatly by our Practical-Applications-of-Prompt study questions. Besides, the price of our Practical-Applications-of-Prompt learning guide is very favourable even the students can afford it.

## WGU Practical Applications of Prompt QFO1 Sample Questions (Q25-Q30):

### NEW QUESTION # 25

A user is crafting a prompt and includes both the goal and the context within the text of the prompt. What is a benefit of crafting the prompt in this way?

- A. Greater interaction effectiveness
- B. Reduced computational load
- C. Improved interface appeal
- D. Faster rate of response

**Answer: A**

Explanation:

Combining a clear goal with rich context is the gold standard for achieving greater interaction effectiveness.

The goal tells the AI what to achieve (the destination), while the context explains the circumstances surrounding the task (the map).

When these two elements are present, the AI can generate a response that is not only factually correct but also relevant to the user's specific situation. Effectiveness in AI interactions is measured by how closely the output meets the user's needs on the first try.

When a prompt lacks a goal, the AI might provide a great summary of a topic but fail to perform the required action. When it lacks context, it might perform the action in a way that is inappropriate for the audience. By merging them, the user minimizes "drift"-the tendency for AI to wander into irrelevant topics. This leads to a more professional, tailored, and high-quality interaction. In practical scenarios, such as drafting a corporate policy or creating a marketing strategy, the synergy between goal and context ensures that the AI understands the "big picture," resulting in a much more effective and usable first draft.

### NEW QUESTION # 26

There have been complaints that deepfake videos on a social media platform are being circulated that show public figures making false statements. Which area of ethical concern does this situation demonstrate?

- A. Bias and representation
- B. Privacy and consent
- C. Regulatory and legal frameworks
- D. Misinformation and manipulation

**Answer: D**

Explanation:

The rise of deepfakes—AI-generated synthetic media that convincingly depicts people saying or doing things they never did—falls squarely under the ethical concern of Misinformation and manipulation. This represents a significant challenge to the "Information Integrity" of digital platforms. By creating realistic but false content, generative AI can be used to influence elections, damage reputations, or incite social unrest.

This ethical concern highlights the "dual-use" nature of AI. While the same technology can be used for harmless entertainment or high-end film production, in the hands of bad actors, it becomes a tool for

"cognitive hacking." Prompt engineering optimization in this context involves developing guardrails within AI models to prevent the generation of content involving public figures or non-consensual imagery. It also involves the use of AI to detect deepfakes by identifying microscopic inconsistencies in pixels or heart-rate signatures that are invisible to the human eye. Addressing misinformation requires a combination of technical watermarking, robust platform policies, and user education to ensure that the boundary between reality and AI-generated fiction remains clear.

### NEW QUESTION # 27

An AI model was trained on historical loan data. A loan officer has noticed that the model disproportionately suggests to refuse loans to people who live in a particular area. What is the type of bias described in the scenario?

- A. Measurement bias

- B. Algorithmic bias
- C. Sampling bias
- D. Selection bias

**Answer: B**

Explanation:

The scenario describes Algorithmic bias, which occurs when an AI system reflects and potentially amplifies the prejudices or inequalities present in the historical data it was trained on. In this case, if historical lending practices were discriminatory toward specific neighborhoods (a practice known as "redlining"), the AI model treats the resulting "denial" patterns as a mathematical rule. It learns that living in a certain zip code is a predictor of loan failure, even if the individual applicants are creditworthy.

This is a major ethical concern in prompt engineering and AI deployment because the "bias" is not a glitch in the code, but a reflection of systemic human bias encoded into the model's logic. It differs from "Sampling bias" (which would occur if the model only looked at one city) or "Measurement bias" (which involves faulty sensors). Algorithmic bias is particularly insidious because it can give discriminatory decisions a "veneer of objectivity," making it harder for human operators to spot the unfairness. Addressing this requires rigorous data auditing and the use of "fairness constraints" to ensure that the AI does not penalize individuals based on protected characteristics or proxy variables like geography.

### NEW QUESTION # 28

An AI system is used to aid in an applicant selection process. The users of the system, however, have no information about which criteria are used to evaluate applicants. Which ethical concern is associated with this issue?

- A. Safety
- B. Fairness
- C. Transparency
- D. Accountability

**Answer: C**

Explanation:

This scenario highlights a critical failure in Transparency. When an AI system acts as a "gatekeeper" for life-changing opportunities—such as employment, university admissions, or bank loans—it is an ethical imperative that the criteria for selection be disclosed. If the users (the hiring managers or the applicants) do not know which variables the AI is prioritizing (e.g., years of experience, specific keywords, or even zip codes), the system is effectively a "Black Box." The lack of transparency here creates several downstream risks. First, it makes it impossible to verify if the system is actually being "Fair." If the criteria are hidden, the AI could be using proxy variables that result in illegal discrimination without anyone noticing. Second, it undermines "Accountability," as a rejected applicant has no way to challenge the decision or understand what they need to improve. In professional prompt engineering, this issue is addressed by designing prompts that require the AI to generate an

"Evaluation Report" alongside its selection, detailing which parts of the resume matched the job description.

This transforms the automated process from an opaque hurdle into a transparent, auditable tool.

### NEW QUESTION # 29

A team of historians wants to use AI-based tools to aid in the research of the history of Europe's agricultural equipment. What is the importance of writing effective prompts in the research?

- A. It determines the level of importance of the research.
- B. It ensures that researchers remain focused.
- C. It ensures that interpretations are innovative.
- D. It reduces the need for reliance on multiple sources.

**Answer: B**

Explanation:

In academic and historical research, the sheer volume of available data can easily lead to "scope creep" or tangential exploration.

Writing effective prompts is crucial because it ensures that researchers remain focused on their specific inquiry. When dealing with a broad subject like "Europe's agricultural equipment," an unstructured prompt might return a generalized history of farming. However, an effective prompt—specifying the region (e.g., Western Europe), the era (e.g., the Industrial Revolution), and the specific type of equipment (e.g., steam-powered threshing machines)—acts as a navigational guide for the AI.

This focus is essential for maintaining the integrity of the research process. It prevents the AI from generating irrelevant "filler" content

and forces the output to adhere to the specific historical parameters defined by the team. While AI can assist in synthesizing information, it cannot determine the "importance" of research (which is a human value judgment) nor should it replace the need for multiple sources (as verification is still required). By refining the prompt to include specific constraints and objectives, historians can use AI as a precision tool to uncover specific data points and trends, ensuring that the resulting analysis stays aligned with the original research goals.
