Which type of object should you use?

- A. Image
- B. Ask Data
- C. Download
- **D. Extension**

答案: D

問題 #17

You have two tables named EmployeeInfo and DepartmentInfo. EmployeeInfo contains four fields named Full Name, Department ID, Start Date, and Salary.

DepartmentInfo contains four fields named Department Name, Size, Department ID, and VP.

You want to combine the tables to meet the following requirements:

. Each record in EmployeeInfo must be retained in the combined table.

. The records must contain the Department Name, Size, and VP fields.

* Every record must have a full name.

Which type of join should you use?

- A. Left
- B. Inner
- C. Full outer
- D. Union

答案： A

解題說明：

To combine the tables and meet the requirements, you should use a left join. A left join will keep all the records from the left table (EmployeeInfo) and match them with the records from the right table (DepartmentInfo) based on the common field (Department ID). If there is no matching record in the right table, the fields from the right table will be null. This way, you will retain all the records from EmployeeInfo, and also include the Department Name, Size, and VP fields from DepartmentInfo. Every record will have a full name because it is a field from the left table. A left join will look like this:
