

Latest updated SCP-NPM Vce Files | Easy To Study and Pass Exam at first attempt & Hot SolarWinds SolarWinds Network Performance Monitor (NPM) Exam

P.S. Free 2025 SolarWinds SCP-NPM dumps are available on Google Drive shared by ITdumpsfree:
<https://drive.google.com/open?id=1WUE7QlsqMrOkmq1WdM0IIPpEVe6NJ9Ys>

The chance to examine the content of the SCP-NPM practice material before purchasing it will give you peace of mind. So, try a free demo to evaluate the authenticity of the SolarWinds SCP-NPM Exam product. ITdumpsfree forewarns you that the topics of the SolarWinds SCP-NPM test change from time to time.

The SCP-NPM Certification Exam is a valuable credential for IT professionals who use SolarWinds NPM to monitor and manage their networks. SCP-NPM exam measures your understanding of the features and functionality of SolarWinds NPM and your ability to configure and troubleshoot the tool. SolarWinds Network Performance Monitor (NPM) Exam certification provides a formal recognition of your expertise in network performance management and can help you advance your career in IT.

100% Pass 2026 SCP-NPM: SolarWinds Network Performance Monitor (NPM) Exam Marvelous Vce Files

For candidates who have little time to prepare for the exam, our SCP-NPM exam dumps will be your best choice. With experienced professionals to edit, SCP-NPM training materials are high-quality, they have covered most of knowledge points for the exam, if you choose, you can improve your efficiency. In addition, we have a professional team to collect and research the latest information for the SCP-NPM Exam Materials. Free update for one year is available, and the update version for SCP-NPM material will be sent to your email automatically.

The SCP-NPM certification exam is recognized by the IT industry as a valuable credential for IT professionals who want to demonstrate their expertise in network performance monitoring and management. It is a valuable credential for IT professionals who want to advance their careers in network administration, network engineering, and IT management. SolarWinds Network Performance Monitor (NPM) Exam certification also demonstrates to employers that the candidate has the knowledge and skills to

manage complex networks and ensure their optimal performance.

Achieving the SCP-NPM Certification demonstrates an individual's expertise in network performance management using the SolarWinds NPM platform. SolarWinds Network Performance Monitor (NPM) Exam certification is particularly valuable for network administrators, IT professionals, and other individuals responsible for managing and monitoring network performance. By earning this certification, candidates will have the knowledge and skills necessary to leverage the full capabilities of SolarWinds NPM in order to optimize network performance and ensure a seamless end-user experience.

SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q62-Q67):

NEW QUESTION # 62

What is required of your nodes to detect duplex mismatches? (Choose all that apply.)

- A. Ensure corresponding values for each interface are different
- B. The nodes must support topology and be interconnected
- C. Duplex of both devices must be identified as full or half
- D. Unify the duplex mode configuration on neighboring interfaces

Answer: B,C,D

Explanation:

To detect duplex mismatches, you need to meet the following requirements1:

The nodes must be monitored by NPM.

The nodes must be in the up state during the discovery.

The nodes must support topology and be interconnected.

Duplex of both devices must be identified as full or half.

The Possible Duplex Mismatches widget must be enabled on the node details view.

You do not need to ensure corresponding values for each interface are different, as this is the result of a duplex mismatch, not a requirement for detection. In fact, you should unify the duplex mode configuration on neighboring interfaces to avoid mismatches1.

NEW QUESTION # 63

You want to create a custom poller for a device. When you select the OID you get an "OID not supported" error. What does this mean?

- A. The SNMP string that you used is incorrect
- B. This OID requires the read/write community string
- C. Your firewall is blocking SNMP requests
- D. The SNMP agent on the device does not report on this OID

Answer: D

Explanation:

An OID (Object Identifier) is a unique identifier for a specific variable in a MIB (Management Information Base) that can be polled or monitored by SNMP (Simple Network Management Protocol). However, not all OIDs are supported by all devices or SNMP agents, which are software components that collect and report the MIB data. If you select an OID that is not supported by the device or the SNMP agent, you will get an "OID not supported" error when you try to create a custom poller for that device in NPM (Network Performance Monitor). This means that the device or the SNMP agent does not have the information for that OID or does not respond to the SNMP request for that OID12.

To resolve this issue, you can try the following steps34:

Verify that the device supports the OID that you want to monitor. You can use the MIB Browser or the MIB Walk tool to browse the MIB tree of the device and find the OID. You can also check the device vendor's documentation or website for the supported OIDs and MIBs.

Verify that the SNMP agent on the device is configured properly and has the latest version. You may need to update the SNMP agent or enable some features or extensions to support the OID. You can also check the SNMP agent's logs or status for any errors or warnings.

Verify that the SNMP credentials and settings are correct and match the device's configuration. You may need to use a different SNMP version, community string, port, or timeout value to communicate with the device. You can also test the SNMP connectivity using the SNMP Test tool or the Test button in the UnDP (Universal Device Poller) application.

Verify that there are no network issues or firewalls that are blocking the SNMP traffic between the NPM server and the device. You may need to allow the SNMP protocol and port on the firewall or router, or use a different network path or interface to reach the device. You can also use the Ping or Traceroute tools to check the network connectivity and latency.

NEW QUESTION # 64

The finance department asks to view select reports from NPM. Because of compliance policies, you cannot create accounts in the Web Console for users outside of the IT department. How do you allow the finance department to view reports without a user account?

- A. Create a service account for Finance
- **B. Create a DirectLink account in the Web Console**
- C. Enable the Guest account
- D. Enable the Link only option on the report

Answer: B

NEW QUESTION # 65

The Orion platform supports agent-based monitoring for which OS types? (Choose all that apply.)

- **A. Linux**
- B. Sun Solaris
- **C. AIX Unix Agents**
- D. IBM
- **E. Windows**

Answer: A,C,E

Explanation:

The Orion platform supports agent-based monitoring for Windows, Linux/Unix, and AIX systems. An Orion agent is software that provides a communication channel between the Orion server and the target system, as an alternative to WMI or SNMP. Agent-based monitoring can offer better performance, security, and reliability than agentless monitoring, especially for remote or cloud-based systems. The Orion platform does not support agent-based monitoring for Sun Solaris or IBM systems, as they are not compatible with the agent software. NEW QUESTION # 66

When you configure a report, you can limit access to specific users.

- A. FALSE
- **B. TRUE**

Answer: B
