## AD0-E725 Torrent & AD0-E725 Test Practice

Pass4training is one of the leading platforms that has been helping Adobe Commerce Developer Expert (AD0-E725) exam candidates for many years. Over this long time period we have helped Adobe Commerce Developer Expert (AD0-E725) exam candidates in their preparation. They got help from Pass4training Adobe AD0-E725 Practice Questions and easily got success in the final Adobe AD0-E725 certification exam. You can also trust Pass4training Adobe Commerce Developer Expert (AD0-E725) exam dumps and start preparation with complete peace of mind and satisfaction.

## Adobe Commerce Developer Expert Sample Questions (Q33-Q38):

### NEW QUESTION # 33

A client uses APIs on their Adobe Commerce platform and powers external programs with the data fed from the Adobe API systems. The client reports that it is becoming unmanageable to handle all the API endpoints and would like to have a centralized API system.

Which new feature will help the client with this problem?

- A. Adobe I/O Events for Adobe Commerce
- B. Adobe Commerce API Mesh

- C. Adobe Bulk API Handler

**Answer: B**

Explanation:

Adobe Commerce API Mesh provides a centralized GraphQL layer that aggregates data from multiple APIs (Commerce, third-party systems, microservices). This allows the client to interact with a single unified API endpoint, instead of managing multiple APIs individually.

A Bulk API Handler does not exist.

B Adobe I/O Events is for real-time event streaming, not API centralization.

C is correct: API Mesh is the official solution for centralized API management.

Reference:

Adobe Commerce API Mesh Overview

#### NEW QUESTION # 34

A multi-source merchant asks an Adobe Commerce Developer to prioritize inventory source selection based on shipping address and minimal delivery cost.

How should the Developer implement this task functionality?

- A. Use Source Priority Algorithm and utilize `GetSourceSelectionAlgorithmList`.
- **B. Configure Distance Priority Algorithm and implement `PlaceReservationsForSalesEventInterface`.**
- C. Register New Source Selection Algorithms via `di.xml` and implement `SourceSelectionInterface`.

**Answer: B**

#### NEW QUESTION # 35

A client receives an alert stating that storage on their production environment is nearly full. They are using Pro architecture and are concerned about storage capacity. A Developer is asked to increase the disk size.

How should this problem be solved?

- A. Modify the `magento.app.yaml` file.
- **B. Open a ticket with Adobe support.**
- C. Extend their Adobe license.

**Answer: B**

Explanation:

In Adobe Commerce Cloud Pro environments, disk allocation is provisioned at the infrastructure level and cannot be changed directly by developers. Increasing disk size requires assistance from Adobe's Cloud Ops team via a support ticket.

A (license extension) is unrelated to storage.

B (`magento.app.yaml`) configures services and resources but cannot increase allocated disk space.

C is correct: Adobe support ticket is required.

Adobe Commerce Cloud DevDocs - Request support for Pro environments

#### NEW QUESTION # 36

A Developer is working on a new controller in admin panel. Per requirements, it must be accessible only for specific admin users. According to best practices, how should the Developer secure access to the new controller?

- A. Implement `isAllowed` method from `AuthorizationInterface` and check the result for a custom access control list (ACL) resource.
- **B. Override `ADMIN_RESOURCE` constant with a value for a custom access control list (ACL) resource.**
- C. Override `_isAllowed` method and check the authorization result for a custom access control list (ACL) resource.

**Answer: B**

### NEW QUESTION # 37

An Adobe Commerce Expert is tasked with implementing a custom condition on salable quantity with reservations. The condition needs to be applicable only when added to cart.

Which option should the Developer implement?

- A. `<type name="Magento\InventoryApi\Model\Stock\ValidatorChain">`  
    `<arguments>`  
    `<argument name="validators" xsi:type="array">`  
    `<item name="is_salable_with_reservations" xsi:type="object"`  
    `>Vendor\InventorySales\Model\Stock\Validator\IsSalableWithReservationsValidator</item>`  
    `</argument>`  
    `</arguments>`  
    `</type>`
- B. `<virtualType name="IsProductSalableForRequestedQtyConditionChainOnAddToCart">`  
    `<arguments>`  
    `<argument name="conditions" xsi:type="array">`  
    `<item name="is_salable_with_reservations" xsi:type="array">`  
    `<item name="object" xsi:type="object"`  
    `>Vendor\InventorySales\Model\IsProductSalableForRequestedQtyCondition\IsSalableWithReservationsC`  
    `/item>`  
    `</item>`  
    `</argument>`  
    `</arguments>`  
    `</virtualType>`
- C. `<preference for="`  
    `Magento\InventorySales\Model\IsProductSalableForRequestedQtyCondition\IsSalableWithReservationsC type="`  
    `Vendor\InventorySales\Model\IsProductSalableForRequestedQtyCondition\IsSalableWithReservationsCo`  
    `/>`

**Answer: B**

Explanation:

To add a custom salable quantity condition for use only during the add-to-cart flow, developers must extend the `IsProductSalableForRequestedQtyConditionChainOnAddToCart` virtual type. This chain is designed specifically for cart validation, ensuring the new condition runs only at that stage.

A would override the core class completely, not scoped to add-to-cart.

B relates to stock validator chains, not salable quantity conditions.

C is correct: defining a virtual type extension ensures proper conditional logic for reservations during cart validation.
