The UpdateDumps wants to win the trust of Google Cloud Certified - Professional Cloud Database Engineer Professional-Cloud-Database-Engineer exam candidates at any cost. To achieve this objective the UpdateDumps is offering Professional-Cloud-Database-Engineer exam passing money-back guarantee. Now your investment with UpdateDumps is secured from any risk. If you fail the Google Cloud Certified - Professional Cloud Database Engineer Professional-Cloud-Database-Engineer Exam despite using PMI Dumps, you can claim your paid amount. Thanks and best of luck in your exam and career!

Google Professional-Cloud-Database-Engineer certification exam is a challenging and in-depth exam that requires a deep understanding of foundational database concepts, as well as advanced knowledge of Google Cloud Platform's database services. Candidates who successfully complete the Google Cloud Certified - Professional Cloud Database Engineer exam demonstrate their expertise in designing, implementing, and managing databases on the Google Cloud Platform.

Google Professional-Cloud-Database-Engineer certification exam is designed to test the skills and knowledge of professionals who are responsible for designing, building, and maintaining cloud-based database solutions. Google Cloud Certified - Professional Cloud Database Engineer certification is aimed at individuals who have experience in database administration, data management, and cloud computing. Professional-Cloud-Database-Engineer Exam is designed to test your knowledge of Google Cloud Platform's database services, including Cloud SQL, Bigtable, and Spanner.

Google Professional-Cloud-Database-Engineer certification exam is a challenging exam that requires a solid understanding of cloud database solutions and their best practices. Candidates who pass the exam will receive a Google Cloud Certified - Professional Cloud Database Engineer certification, which is recognized by the industry and demonstrates their expertise in cloud-based database solutions. Google Cloud Certified - Professional Cloud Database Engineer certification can help professionals advance their career and increase their earning potential.

Reliable Exam Google Professional-Cloud-Database-Engineer Pass4sure | Professional-Cloud-Database-Engineer Questions Exam

Customers can start using the Google Professional-Cloud-Database-Engineer Exam Questions instantly just after purchasing it from our website for the preparation of the Professional-Cloud-Database-Engineer certification exam. They can also evaluate the Google Cloud Certified - Professional Cloud Database Engineer (Professional-Cloud-Database-Engineer) practice test material before buying with a free demo. The users will receive updates 365 days after purchasing. And they will also get a 24/7 support system to help them anytime if they got stuck somewhere or face any issues while preparing for the Professional-Cloud-Database-Engineer Exam.

Google Cloud Certified - Professional Cloud Database Engineer Sample Questions (Q98-Q103):

NEW QUESTION # 98

You are the DBA of an online tutoring application that runs on a Cloud SQL for PostgreSQL database. You are testing the implementation of the cross-regional failover configuration. The database in region R1 fails over successfully to region R2, and the database becomes available for the application to process data. During testing, certain scenarios of the application work as expected in region R2, but a few scenarios fail with database errors. The application-related database queries, when executed in isolation from Cloud SQL for PostgreSQL in region R2, work as expected. The application performs completely as expected when the database fails back to region R1. You need to identify the cause of the database errors in region R2. What should you do?

- A. Determine whether the database patches of Cloud SQL for PostgreSQL in regions R1 and R2 are different.
- B. Determine whether the failover of Cloud SQL for PostgreSQL from region R1 to region R2 is in progress or has completed successfully.
- C. Determine whether the versions of Cloud SQL for PostgreSQL in regions R1 and R2 are different.
- D. Determine whether Cloud SQL for PostgreSQL in region R2 is a near-real-time copy of region R1 but not an exact copy.

Answer: D

Explanation:

Verify that the replica has processed all the transactions it has received from the primary. This ensures that when promoted, the replica reflects all transactions that were received before the primary became unavailable.

https://cloud.google.com/sql/docs/postgres/replication/cross-region-replicas#verify_failover_criteria

NEW QUESTION # 99

Your organization is running a critical production database on a virtual machine (VM) on Compute Engine. The VM has an ext4-formatted persistent disk for data files. The database will soon run out of storage space. You need to implement a solution that avoids downtime. What should you do?

- A. In the Google Cloud Console, increase the size of the persistent disk, and use the fdisk command to verify that the new space is ready to use
- B. In the Google Cloud Console, create a snapshot of the persistent disk, restore the snapshot to a new larger disk, unmount the old disk, mount the new disk, and restart the database service.
- C. In the Google Cloud Console, increase the size of the persistent disk, and use the resize2fs command to extend the disk.
- D. In the Google Cloud Console, create a new persistent disk attached to the VM, and configure the database service to move the files to the new disk.

Answer: D

NEW QUESTION # 100

Your organization is migrating 50 TB Oracle databases to Bare Metal Solution for Oracle. Database backups must be available for quick restore. You also need to have backups available for 5 years. You need to design a cost-effective architecture that meets a recovery time objective (RTO) of 2 hours and recovery point objective (RPO) of 15 minutes. What should you do?

- A. Create the database on a Bare Metal Solution server with the database running on flash storage.
Keep a local backup copy on standard storage.
Use the Oracle Recovery Manager (RMAN) backup utility to move backups older than one day to a Coldline Storage bucket.
- B. Create the database on a Bare Metal Solution server with the database running on flash storage.
Keep a local backup copy on all flash storage.
Keep backups older than one day stored in Actifio OnVault storage.
- C. Create the database on a Bare Metal Solution server with the database running on flash storage.
Keep a local backup copy on standard storage.
Keep backups older than one day stored in Actifio OnVault storage.
- D. Create the database on a Bare Metal Solution server with the database running on flash storage.
Keep a local backup copy on all flash storage.
Use the Oracle Recovery Manager (RMAN) backup utility to move backups older than one day to an Archive Storage bucket.

Answer: C

Explanation:

This answer meets the RTO and RPO requirements by using flash storage for the database and standard storage for the local backup copy. It also meets the cost-effectiveness requirement by using Actifio OnVault storage, which is a low-cost, high-performance, and scalable storage solution that integrates with Google Cloud Backup and DR Service1.

NEW QUESTION # 101

You need to perform a one-time migration of data from a running Cloud SQL for MySQL instance in the us-central1 region to a new Cloud SQL for MySQL instance in the us-east1 region. You want to follow Google-recommended practices to minimize performance impact on the currently running instance. What should you do?

- A. Create a CSV file by running the SQL statement SELECT...INTO OUTFILE, copy the file to a Cloud Storage bucket, and import it into a new instance.
- B. Create and run a Dataflow job that uses JdbcIO to copy data from one Cloud SQL instance to another.
- C. Create two Datastream connection profiles, and use them to create a stream from one Cloud SQL instance to another.
- D. Create a SQL dump file in Cloud Storage using a temporary instance, and then use that file to import into a new instance.

Answer: D

Explanation:

<https://cloud.google.com/sql/docs/mysql/import-export#serverless>

NEW QUESTION # 102

You are managing two different applications: Order Management and Sales Reporting. Both applications interact with the same Cloud SQL for MySQL database. The Order Management application reads and writes to the database 24/7, but the Sales Reporting application is read-only. Both applications need the latest data. You need to ensure that the Performance of the Order Management application is not affected by the Sales Reporting application. What should you do?

- A. Queue up all the requested reports in PubSub, and execute the reports at night.
- B. Create two separate databases in the instance, and perform dual writes from the Order Management application.
- C. Create a read replica for the Sales Reporting application.
- D. Use a Cloud SQL federated query for the Sales Reporting application.

Answer: D

NEW QUESTION # 103

.....

With all these features, another plus is the easy availability of UpdateDumps's products. They are instantly downloadable and supported with our online customer service to answer your queries promptly. Your preparation for exam Professional-Cloud-Database-Engineer with UpdateDumps will surely be a worth-remembering experience for you!
