Test Mule-101 Sample Online, Latest Mule-101 Braindumps Pdf

You can directly refer our Mule-101 study materials to prepare the exam. Once the newest test syllabus is issued by the official, our experts will quickly make a detailed summary about all knowledge points of the real Mule-101 exam in the shortest time. All in all, our Mule-101 Exam Quiz will help you grasp all knowledge points. Not only our professional expert have simplified the content of the subject for you to understand fully, but also our Mule-101 practice guide will help you pass the exam smoothly.

Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q32-Q37):

NEW QUESTION # 32

According to MuleSoft, which major benefit does a Center for Enablement (C4E) provide for an enterprise and its lines of business?

- A. Centralizing project management across the lines of business
- B. Enabling Edge security between the lines of business and public devices
- C. Accelerating self-service by the lines of business
- D. Centrally managing return on investment (ROI) reporting from lines of business to leadership

Answer: C

Explanation:

Center for Enablement (C4E): Unlike a Center of Excellence (CoE) which centralizes work, a C4E focuses on enablement.

Self-Service: The primary goal is to harvest reusable assets and best practices so that the Lines of Business (LOB) can build their own projects using these assets. This accelerates self-service and removes Central IT as the bottleneck¹³.

Why others are incorrect:

Centralizing Project Management (D): C4E promotes decentralized delivery (federation), not centralized management.

NEW QUESTION # 33

Which Exchange asset type represents a complete API specification in RAML or OAS format?

- A. Connectors
- B. API Spec Fragments
- C. SOAP APIs
- **D. REST APIs**

Answer: D

Explanation:

REST APIs (Asset Type): In Anypoint Exchange and Design Center, when you create a new project to define a full API specification (using RAML or OAS), the resulting asset type is categorized as a "REST API." API Spec Fragments: These are parts of a specification (like a specific Data Type, Trait, or Security Scheme) designed to be reused across multiple different API specs. They are not "complete" APIs on their own.

SOAP APIs: Use WSDL (XML), not RAML/OAS.

NEW QUESTION # 34

A system administrator needs to determine when permissions were last changed for an Anypoint Platform user.

- A. Anypoint Studio
- B. Anypoint Monitoring
- C. Mule Stack Traces
- **D. Audit Logging**

Answer: D

Explanation:

Audit Logging: This feature in Anypoint Platform provides a searchable history of actions performed within the platform. It is designed specifically for governance and security compliance.

What it tracks: It records "who did what and when." This includes changes to:

User permissions and roles (Access Management).

Environment configurations.

API Manager policies.

Why others are incorrect:

Anypoint Monitoring: Focuses on application performance (CPU, Memory, API analytics), not administrative actions.

Stack Traces: Are used for debugging runtime application errors, not auditing user permissions.

NEW QUESTION # 35

According to MuleSoft, what is a major distinguishing characteristic of an application network in relation to the integration of systems, data, and devices?

- A. It uses CI/CD automation for real-time project delivery
- B. It leverages well-accepted internet standards like HTTP and JSON
- **C. It is built for change and self-service**
- D. It uses a well-organized monolithic approach with standards

Answer: C

Explanation:

The Application Network: MuleSoft defines an application network as a network of applications, data, and devices connected with APIs to make them pluggable and reusable.

Built for Change: Unlike rigid point-to-point integrations, an application network is designed to be flexible. Because the nodes (APIs) are reusable and discoverable, the network can evolve and change as business needs change without breaking existing connections.

Self-Service: By publishing these APIs to Exchange, developers across the organization can discover and reuse them (Self-Service), facilitating the "bottom-up" emergence of the network.

NEW QUESTION # 36

An integration architect is designing an API that must accept requests from API clients for both XML and JSON content over HTTP/1.1 by default.

- A. SOAP
- B. GraphQL
- C. gRPC
- **D. REST**

Answer: D

Explanation:

REST (Representational State Transfer): REST is an architectural style that allows resources to be represented in multiple formats (Media Types).

Versatility: Unlike SOAP (which is strictly XML), a RESTful API can easily support both JSON and XML representations of the same resource, often determined by the Accept or Content-Type headers.

Why others are incorrect:

SOAP: Strictly uses XML.

GraphQL: Typically uses JSON for both queries and responses.

gRPC: Uses Protocol Buffers (binary), not human-readable JSON/XML by default.

NEW QUESTION # 37

.....

Salesforce Mule-101 certifications are thought to be the best way to get good jobs in the high-demanding market. There is a large range of Mule-101 certifications that can help you improve your professional worth and make your dreams come true.
