## **Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q470-Q475):**

### **NEW QUESTION # 470**

You are developing a multi-tier application. The application will use Azure App Service web apps as the front end and an Azure SQL database as the back end. The application will use Azure functions to write some data to Azure Storage.

You need to send the Azure DevOps team an email message when the front end fails to return a status code of 200.

Which feature should you use?

- **A. Application Map in Azure Application Insights**
- B. Profiler in Azure Application Insights
- C. Availability tests in Azure Application Insights
- D. Service Map in Azure Log Analytics

**Answer: A**

Explanation:

Application Map helps you spot performance bottlenecks or failure hotspots across all components of your distributed application. Each node on the map represents an application component or its dependencies; and has health KPI and alerts status.

Incorrect Answers:

A: Service Map automatically discovers application components on Windows and Linux systems and maps the communication between services. You can use it to view your servers as you think of them--interconnected systems that deliver critical services. Service Map shows connections between servers, processes, and ports across any TCP-connected architecture with no configuration required, other than installation of an agent.

References: <https://docs.microsoft.com/en-us/azure/azure-monitor/app/app-map>

### **NEW QUESTION # 471**

You are deploying a new application that uses Azure virtual machines.

You plan to use the Desired State Configuration (DSC) extension on the virtual machines.

You need to ensure that the virtual machines always have the same Windows features installed.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

.....

**Actions**

- Load the file to Azure Files.
- Create a PowerShell configuration file.
- Create a YAML configuration file.
- Configure the Custom Script Extension on the virtual machines.
- Configure the DSC extension on the virtual machines.
- Load the file to Azure Blob storage.

**Answer Area**

**Answer:**

Explanation:

.....

**Actions**

- Load the file to Azure Files.
- Create a PowerShell configuration file.
- Create a YAML configuration file.
- Configure the Custom Script Extension on the virtual machines.
- Configure the DSC extension on the virtual machines.
- Load the file to Azure Blob storage.

**Answer Area**

- Create a PowerShell configuration file.
- Load the file to Azure Blob storage.
- Configure the Custom Script Extension on the virtual machines.

Explanation

**Answer Area**

- 1 Create a PowerShell configuration file.
- 2 Load the file to Azure Blob storage.
- 3 Configure the Custom Script Extension on the virtual machines.

**NEW QUESTION # 472**

You need to recommend project metrics for dashboards in Azure DevOps.

Which chart widgets should you recommend for each metric? To answer, drag the appropriate chart widgets to the correct metrics. Each chart widget may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**Chart Widgets    Answer Area**

Burndown	The elapsed time from the creation of work items to their completion:	<input type="text"/>
Cycle Time	The elapsed time to complete work items once they are active:	<input type="text"/>
Lead Time	The remaining work:	<input type="text"/>
Velocity		<input type="text"/>

Answer:

Explanation:

**Chart Widgets**  **Answer Area**

<b>Burndown</b>	The elapsed time from the creation of work items to their completion:	<b>Lead Time</b>
<b>Cycle Time</b>	The elapsed time to complete work items once they are active:	<b>Cycle Time</b>
<b>Lead Time</b>		
<b>Velocity</b>	The remaining work:	<b>Burndown</b>

Explanation:

**Answer Area**

The elapsed time from the creation of work items to their completion:	<b>Lead Time</b>
The elapsed time to complete work items once they are active:	<b>Cycle Time</b>
The remaining work:	<b>Burndown</b>

Box 1: Lead time

Lead time measures the total time elapsed from the creation of work items to their completion.

Box 2: Cycle time

Cycle time measures the time it takes for your team to complete work items once they begin actively working on them.

Box 3: Burndown

Burndown charts focus on remaining work within a specific time period.

### NEW QUESTION # 473

You have a GitHub organization named org1 and an Azure tenant named Tenant1.

You need to enable single sign-on (SSO) in Azure Active Directory (Azure AD) for the users in org1.

Which URIs should you use for the SAML configuration in Azure AD? To answer, drag the appropriate URIs to the correct settings. Each URI may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**URIs**  **Answer Area**

<input type="text" value="https://github.com/orgs/org1"/>	Identifier (Entity ID):	<input type="text"/>
<input type="text" value="https://github.com/orgs/org1/sso"/>	Reply URL (Assertion Consumer Service URL):	<input type="text"/>
<input type="text" value="https://login.microsoftonline.com/tenant1"/>	Sign on URL:	<input type="text"/>
<input type="text" value="https://github.com/orgs/org1/saml/consume"/>		
<input type="text" value="https://login.microsoftonline.com/tenant1.com"/>		

**Answer:**

Explanation:

**URIs**

- https://github.com/orgs/org1
- https://github.com/orgs/org1/sso
- https://login.microsoftonline.com/tenant1
- https://github.com/orgs/org1/saml/consume
- https://login.microsoftonline.com/tenant1.com

**Answer Area**

Microsoft

- Identifier (Entity ID): https://github.com/orgs/org1
- Reply URL (Assertion Consumer Service URL): https://github.com/orgs/org1/saml/consume
- Sign on URL: https://github.com/orgs/org1/sso

Explanation

Graphical user interface, text, application Description automatically generated

**NEW QUESTION # 474**

**SIMULATION**

In Project1, you need to create a variable group named varGroup1 that will contain the following variables:

serverName: server1

dbName: db1

**Answer:**

Explanation:

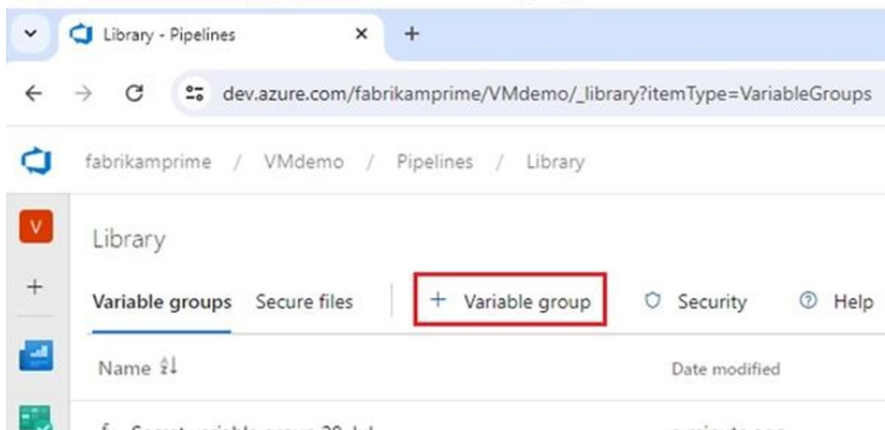

Azure DevOps Azure Pipelines, Manage variable groups

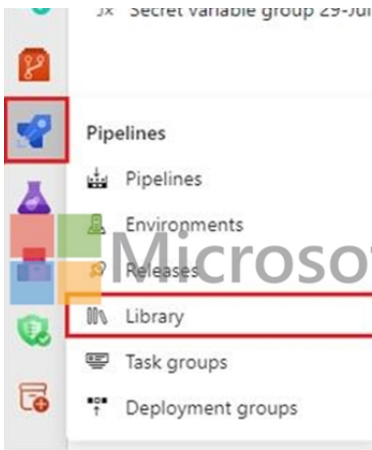

Create a variable group

You can create variable groups for the pipeline runs in your project.

Step 1: In your Azure DevOps project [Here Project1], select Pipelines > Library from the left menu.

Step 2: On the Library page, select + Variable group.

Step 3: On the new variable group page, under Properties, enter a name [Here Group1] and optional description for the variable group.

Step 4: Under Variables, select + Add, and then enter a variable name and value to include in the group. If you want to encrypt and securely store the value, select the lock icon next to the variable.

[Add variable + value: serverName: server1]

[Add variable + value: dbName: db1]

Step 5: Select + Add to add each new variable. When you finish adding variables, select Save.

Library > home-office-config\*

Variable group | Save | Clone | Security | Pipeline permissions | Approvals and checks | Help

### Properties

Variable group name  
home-office-config

Description  
Variables for the home office website

Link secrets from an Azure key vault as variables ⓘ

### Variables

Name ↑	Value	
app-location	home-office	
app-name	contoso	
password	*****
