NEW QUESTION # 68

What two tools can an administrator use to debug an issue with an Apex trigger?

- **A. Log Inspector in the Developer Console**
- B. Error Logs in the Developer Console

- C. Apex Logs in Setup
- **D. Debug Logs in Setup**

Answer: A,D

Explanation:

The administrator can use two tools to debug an issue with an Apex trigger: Log Inspector in the Developer Console and Debug Logs in Setup. The Log Inspector is a tool that displays a graphical representation of a debug log, which is a record of database operations, system processes, and errors that occur when executing a transaction or running unit tests. The Log Inspector helps you analyze and troubleshoot your code by highlighting errors, checkpoints, and execution times. The Debug Logs page in Setup lets you monitor and retain debug logs for users, Apex classes, Apex triggers, and Lightning components. You can view, download, or delete debug logs from this page.

- A. Lightning Logs within Setup
- B. The Problems tab within the developer console
- **C. A user trace flag and debug log on the affected user**
- D. The Chrome Dev Tools Console

Answer: C

Explanation:

The best way for an administrator to research the issue when a user is encountering an error when attempting to save an Account record is to use a user trace flag and debug log on the affected user. A user trace flag enables debug logging for a specific user, and a debug log captures database operations, system processes, and errors that occur when executing a transaction or running unit tests. The administrator can use these tools to identify the root cause of the error and fix it accordingly.
