## Health-Fitness-and-Wellness Exam Questions Dumps, WGU Health, Fitness, and Wellness (HIO1) VCE Collection

The Exams is committed to making the WGU Health-Fitness-and-Wellness exam dumps the best Health-Fitness-and-Wellness exam study material. To achieve this objective the Exams have hired a team of experienced and qualified WGU Health-Fitness-and-Wellness Exam trainers. They work together and check all WGU Health-Fitness-and-Wellness exam questions step by step and ensure the top standard of WGU Health-Fitness-and-Wellness practice test material all the time.

### WGU Health, Fitness, and Wellness (HIO1) Sample Questions (Q22-Q27):

NEW QUESTION # 22

Which immune system proteins recognize and inactivate invaders?

- A. Hormones
- B. Antigens
- C. Cytokines
- **D. Antibodies**

**Answer: D**

Explanation:

Antibodies are specialized proteins made by the immune system to recognize, bind to, and help neutralize harmful invaders such as bacteria, viruses, and other foreign substances. They are produced by B lymphocytes (B cells), which can develop into plasma cells that release large amounts of antibodies into the blood and lymph. Each antibody is designed to fit a specific target, called an antigen, much like a key fits a lock.

When antibodies bind to antigens on the surface of an invader, they help "inactivate" the threat in several important ways. First, they can neutralize pathogens directly by blocking their ability to enter body cells or release toxins. Second, antibodies can tag invaders for destruction—a process called opsonization—making it easier for immune cells such as macrophages and neutrophils to engulf and break down the pathogen. Third, antibodies can activate the complement system, a group of proteins that can puncture pathogen membranes or amplify immune responses.

It's important to distinguish antibodies from the other options. Antigens are not immune proteins that protect you; they are the foreign markers on pathogens that antibodies recognize. Cytokines are signaling proteins that coordinate immune activity (they "communicate" between cells rather than specifically binding invaders).

Hormones regulate body functions like metabolism, growth, and stress response, but they are not the primary proteins that recognize pathogens.

In health and wellness, strong immune function is supported by adequate sleep, balanced nutrition (especially protein, vitamins A/C/D, zinc), stress management, and regular physical activity—all of which help the body produce and regulate immune components, including antibodies.

#### **NEW QUESTION # 23**

Which of the following contribute to a healthy diet? Select 3 answers.

- **A. Limiting intake of added sugars and salt**
- **B. Consuming three-ounce equivalents or more per day of whole-grain foods**
- C. Consuming whole-milk products after childhood
- **D. Choosing a variety of fruits and vegetables each day**
- E. Allocating over 20% of daily calories to saturated fatty acids

**Answer: A,B,D**

Explanation:

A healthy diet supports steady energy, healthy body composition, heart health, digestion, and long-term disease prevention. The three options that most directly align with widely taught nutrition principles are limiting added sugars and salt (A), including whole grains (B), and eating a variety of fruits and vegetables (C).

Limiting added sugar helps reduce excess calorie intake with little nutritional value and supports healthier blood sugar patterns and dental health. Reducing salt (sodium) supports healthy blood pressure, which is a major protective factor for cardiovascular and kidney health. Choosing a variety of fruits and vegetables increases intake of fiber, potassium, and many vitamins and protective plant compounds. Variety matters because different colors and types provide different nutrient profiles (for example, leafy greens, orange vegetables, berries, and cruciferous vegetables each contribute unique benefits).

Consuming whole grains—such as oats, brown rice, whole-wheat bread, and whole-grain pasta—supports digestive health through fiber, improves fullness, and contributes nutrients like B vitamins and minerals.

Many educational nutrition plans encourage making at least half of grains whole, and "three-ounce equivalents or more" reflects a common daily target used in dietary planning.

The remaining options do not reflect healthy-diet guidance. Allocating over 20% of daily calories to saturated fat (D) is generally considered too high and is associated with poorer heart-health patterns when it displaces unsaturated fats. "Consuming whole-milk products after childhood (E)" is not a general requirement for health; while dairy can be part of a balanced diet, choosing lower-fat dairy is often recommended to limit saturated fat while still getting calcium and protein.

#### **NEW QUESTION # 24**

Which method is an effective way to prevent cross-contamination?

- A. Cook foods in different pots and pans
- B. Rinse produce before cutting or consuming
- **C. Use different cutting boards for meat and produce**
- D. Store food in separate containers in the freezer

**Answer: C**

Explanation:

Cross-contamination happens when harmful microorganisms (often from raw meat, poultry, seafood, or eggs) transfer to ready-to-eat foods such as fruits, vegetables, or cooked items. A highly effective prevention method is using different cutting boards for meat and produce (A). This practice prevents raw juices or residue—potentially containing bacteria—from contacting foods that may not be cooked afterward. It's especially important because many produce items are eaten raw, so any bacteria transferred onto them can be consumed.

While options B and C may help organization or cooking efficiency, they are not as direct or comprehensive for preventing cross-contamination during food preparation. Storing food in separate freezer containers can reduce mixing and mess, but cross-contamination most commonly occurs during prep on counters, boards, knives, and hands. Cooking foods in different pots and pans can help, yet bacteria are often transferred before foods reach the heat of cooking, and shared utensils or surfaces can still spread contaminants.

Option D (rinsing produce) can reduce dirt and some surface contamination, but it does not address the main cross-contamination pathway from raw meat to produce via cutting boards and utensils. Also, rinsing cannot be relied on to remove all harmful microorganisms once contamination occurs. Using separate boards—along with washing knives, counters, and hands with soap and warm water after handling raw animal products—is a cornerstone safety habit taught in health and nutrition education.

In short, separating raw and ready-to-eat foods at the cutting board level is one of the most effective, simple, and consistent ways to reduce food-borne illness risk.

#### **NEW QUESTION # 25**

What is a dimension of social health?

- **A. Developing interpersonal relationships**
- B. Completing an undergraduate degree
- C. Focusing efforts on workplace success
- D. Seeking physical wellness

**Answer: A**

Explanation:

A core dimension of social health is developing interpersonal relationships. Social health refers to how well a person connects with others, communicates, builds trust, resolves conflict, and maintains supportive networks. Healthy interpersonal relationships can include friendships, family connections, teammates, classmates, mentors, and community groups. Strong social ties are linked with better coping during stress, greater belonging, and improved overall well-being.

In Social and Emotional Learning (SEL), developing interpersonal relationships involves skills such as empathy, active listening, respectful communication, cooperation, and setting healthy boundaries. It also includes the ability to seek help when needed and to offer support to others appropriately. Social health is not simply "being popular"; it is about building relationships that are respectful, safe, and mutually supportive.

The other options are not direct dimensions of social health. Seeking physical wellness relates primarily to physical health behaviors (activity, sleep, hygiene, medical care). Completing an undergraduate degree is an educational achievement, which may influence social opportunities but is not itself a dimension of social health. Focusing efforts on workplace success relates to career development and achievement; it can involve social skills, but it is not the definition of social health.

Social health matters in daily life because relationships influence choices and habits: friends and family can encourage healthy behaviors, provide emotional support, and help a person feel connected. In wellness education, students are often encouraged to practice communication skills, conflict resolution, and community involvement because these strengthen social health and contribute to healthier emotional functioning.

#### **NEW QUESTION # 26**

A sedentary individual is encouraged by a physician to increase physical activity to 30 minutes at least three times per week. What will be the first noticeable health benefit of this regimen?

- A. Increased total cholesterol
- B. Reduced risk of chronic disease

- C. Elevated mood
- D. Decreased sleep

**Answer: C**

Explanation:

When a sedentary person begins exercising for 30 minutes at least three times per week, one of the earliest and most noticeable benefits is often an improvement in mood. Physical activity can produce near-term changes in brain chemistry and stress regulation—many people report feeling calmer, more positive, and less tense after even a single session. Public health guidance notes that some brain-related benefits of physical activity can happen immediately after a bout of moderate-to-vigorous activity, including reduced short-term feelings of anxiety.

This quick mood shift is tied to mechanisms emphasized in many fitness and wellness resources: exercise helps lower stress hormones and supports the release of "feel-good" neurochemicals (commonly discussed as endorphins), improving emotional state and helping with mild symptoms of stress or low mood. Mayo Clinic also highlights mood improvement as a key benefit of exercising several times per week.

The other answer choices are less appropriate as "first noticeable" benefits. Exercise does not cause "increased total cholesterol" as a desirable early outcome; over time, regular physical activity is more associated with healthier lipid patterns. "Reduced risk of chronic disease" is a real and important benefit, but it usually becomes measurable over weeks to months of consistency (and is not typically the first thing someone notices day-to-day). Finally, "decreased sleep" is not a typical health benefit—regular activity more commonly supports better sleep quality over time, not worse sleep.

In practical terms, early mood benefits can help build adherence: noticing you feel better after workouts makes it easier to maintain the routine long enough to earn the longer-term gains like improved fitness, blood pressure control, and reduced chronic disease risk.

## NEW QUESTION # 27

.....

We provide the best privacy protection to the client and all the information of our client to buy our Health-Fitness-and-Wellness test prep is strictly kept secret. All our client come from the whole world and the people in some countries attach high importance to the privacy protection. Even some people worry about that we will sell their information to the third side and cause unknown or serious consequences. The aim of our service is to provide the Health-Fitness-and-Wellness Exam Torrent to the client and help them pass the exam and not to disclose their privacy to others and seek illegal interests.
