## Avaya Aura Communication Applications Implement Sample Questions (Q56-Q61):

### NEW QUESTION # 56

When planning the Avaya Session Border Controller for Enterprise (SBCE) for SIP Trunking, what is a good practice to adopt?

- A. Name Interfaces consistently, for example, A1 for Internal network to Call Server and B1 for external to Trunk Server.
- B. Use the same IP address on both, internal and external sides of the network.
- C. Use one Avaya Session Border Controller for Enterprise on the internal and external sides of the network.
- D. Name all internal and external interfaces exactly the same.

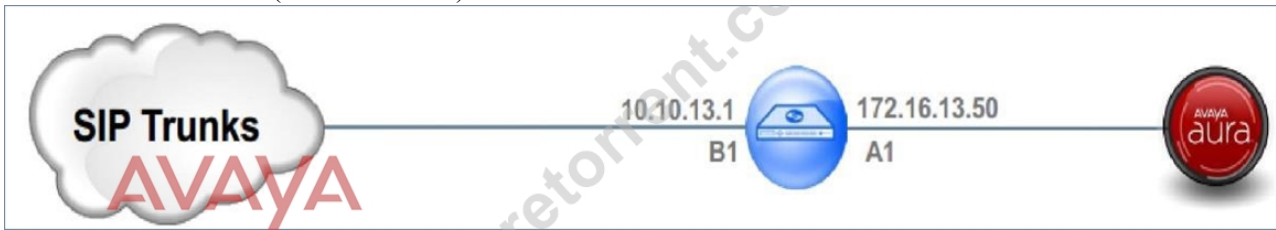

**Answer: A**

Explanation:

Use the same interface mapping throughout! Examples in this section use:

A1 as the internal interface (to the call server)

B1 as the external interface (to the trunk server)

#### NEW QUESTION # 57

When planning the Avaya Session Border Controller for an Enterprise (ASBCE) deployment, what is a good practice to adopt?

- A. Use dedicated ASBCEs on the internal and external sides of the network.
- **B. Name interfaces consistently, for example, A1 as "Internal" or "Private" for connectivity to the Call Server.**
- C. Use the same name for all internal and external interfaces.
- D. Use the same IP address sub-net for both internal and external interfaces.

**Answer: B**

Explanation:

When deploying an Avaya Session Border Controller for Enterprise (ASBCE), consistent interface management is a critical best practice. Because the ASBCE acts as a bridge between two distinct security zones (typically an untrusted public network and a trusted private network), naming conventions help avoid critical configuration errors.

**Avoiding Misconfiguration:** By naming an interface like A1 as "Internal" or "Private," an administrator immediately understands that this interface is intended for traffic directed toward the Session Manager (SM) or Communication Manager (CM).

**Routing Clarity:** When configuring signaling groups and media relay settings, you must specify which interface handles the traffic. If your naming is intuitive (e.g., "Internal" for the core side and "External" for the public side), the risk of routing SIP traffic out of the wrong interface-which could lead to dropped calls or security vulnerabilities-is significantly minimized.

#### NEW QUESTION # 58

When configuring a SIP Entity for Avaya Aura Messaging (AAM) in Avaya Aura System Manager, which Type of SIP entity needs to be selected?

- A. Messaging
- B. Avaya Aura Messaging
- C. Communication Manager Messaging
- **D. Other**

**Answer: D**

Explanation:

Define SIP Entity

Expand Elements, Routing and select SIP Entities from the left navigation menu. Click New (not shown). In the General section, enter the following values and use default values for remaining fields.

\* Name: Enter an identifier for the SIP Entity

\* FQDN or IP Address: Enter IP address of Avaya Aura Messaging

\* Type: Select "Other"

Etc.

#### NEW QUESTION # 59

A user has been informed by the Attendant that a call for them has been parked using the Avaya Call Park and Page running on the Breeze platform.

How can the user retrieve the parked call?

- A. by dialing the system-wide Pilot extension
- B. by dialing the Answer Back feature access code
- C. by pressing the Call Park button on their endpoint
- D. by dialing the Park extension used to park the call

**Answer: D**

Explanation:

When the Avaya Call Park and Page snap-in (running on the Avaya Breeze platform) parks a call, it effectively places the call into a "holding pattern" on a specific system extension (the "Park Slot").

Retrieval Process: Once the attendant informs the user that a call is parked for them, they simply need to dial the specific extension where the call is currently held.

System Logic: When the user dials that extension, the Breeze snap-in detects the request, identifies that a call is parked on that specific resource, and immediately "unparks" (connects) that call to the user's current device.

### NEW QUESTION # 60

On Avaya Session Border Controller for Enterprise (SBCE), which two ways can be used to view System Logs? (Choose two.)

- A. from System Manager web GUI > Alarms and Events
- B. from CLI execute `cat > var > log > Avaya > syslog`
- C. from CLI execute `cat archive > syslog > ipcs.log`
- D. from EMS web GUI SBCE Dashboard access Logs > System Logs

**Answer: C,D**

Explanation:

C: Call Trace data are written to this location:

- /archive/syslog/ipcs/octeon.log

D: Viewing system logs

Procedure

1. Log on to the EMS web interface with administrator credentials.
2. Select the Logs option from the toolbar, and click the System Logs menu.

The system displays the Syslog Viewer screen. On this screen, you can specify criteria in the Query Options section to filter the results displayed.

3. In the Start Date and End Date fields, filter the results displayed in a search report to fall within starting and ending dates and times. In previous Avaya SBCE Syslog Viewer windows, there were four separate fields: Start Date, Start Time, End Date, and End Time.
