

# Pass Guaranteed Quiz SC-401 - Administering Information Security in Microsoft 365 Latest Reliable Dumps Ebook

P.S. Free & New SC-401 dumps are available on Google Drive shared by Braindumpsqa: [https://drive.google.com/open?id=1yexscT\\_ryZ7BDTeXJnyDljwXbOsJ-zkL](https://drive.google.com/open?id=1yexscT_ryZ7BDTeXJnyDljwXbOsJ-zkL)

Our Microsoft SC-401 desktop-based practice software is the most helpful version to prepare for Administering Information Security in Microsoft 365 exam as it simulates the real certification exam. You can practice all the difficulties and hurdles which could be faced in an actual Administering Information Security in Microsoft 365 SC-401 Exam. It also assists you in boosting confidence. The Braindumpsqa designs SC-401 desktop-based practice software for desktops, so you can install it from a website and then use it without an internet connection.

## Microsoft SC-401 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• <b>Protect Data Used by AI Services:</b> This section evaluates AI Governance Specialists on securing data in AI-driven environments. It includes implementing controls for Microsoft Purview, configuring Data Security Posture Management (DSPM) for AI, and monitoring AI-related security risks to ensure compliance and protection.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• <b>Implement Information Protection:</b> This section measures the skills of Information Security Analysts in classifying and protecting data. It covers identifying and managing sensitive information, creating and applying sensitivity labels, and implementing protection for Windows, file shares, and Exchange. Candidates must also configure document fingerprinting, trainable classifiers, and encryption strategies using Microsoft Purview.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• <b>Implement Data Loss Prevention and Retention:</b> This section evaluates Data Protection Officers on designing and managing data loss prevention (DLP) policies and retention strategies. It includes setting policies for data security, configuring Endpoint DLP, and managing retention labels and policies. Candidates must understand adaptive scopes, policy precedence, and data recovery within Microsoft 365.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• <b>Manage Risks, Alerts, and Activities:</b> This section assesses Security Operations Analysts on insider risk management, monitoring alerts, and investigating security activities. It covers configuring risk policies, handling forensic evidence, and responding to alerts using Microsoft Purview and Defender tools. Candidates must also analyze audit logs and manage security workflows.</li></ul>

## Exam Dumps: Administering Information Security in Microsoft 365

The world is rapidly moving forward due to the prosperous development of information. Our company is also making progress in every side. The first manifestation is downloading efficiency. A lot of exam candidates these days are facing problems like lacking of time, or lacking of accessible ways to get acquainted with high efficient SC-401 guide question like ours. We emphasize on customers satisfaction, which benefits both exam candidates and our company equally. By developing and nurturing superior customers value, our company has been getting and growing more and more customers. To satisfy the goals of exam candidates, we created the high quality and high accuracy SC-401 real materials for you. By experts who diligently work to improve our practice materials over ten years, all content are precise and useful and we make necessary alternations at intervals.

### Microsoft Administering Information Security in Microsoft 365 Sample Questions (Q190-Q195):

#### NEW QUESTION # 190

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 subscription.

You have a user named User1. Several users have full access to the mailbox of User1.

Some email messages sent to User1 appear to have been read and deleted before the user viewed them.

When you search the audit log in the Microsoft Purview portal to identify who signed in to the mailbox of User1, the results are blank.

You need to ensure that you can view future sign-ins to the mailbox of User1.

Solution: You run the `Set-AdminAuditLogConfig -AdminAuditLogEnabled $true -AdminAuditLogCmdlets`

`*Mailbox*` command.

Does that meet the goal?

- A. No
- B. Yes

**Answer: A**

Explanation:

The `Set-AdminAuditLogConfig -AdminAuditLogEnabled $true -AdminAuditLogCmdlets *Mailbox*` command is incorrect. This enables admin audit logging, which tracks changes to mailbox configurations (e.g., mailbox settings updates), not user activity inside the mailbox.

#### NEW QUESTION # 191

You have a Microsoft 365 subscription.

You have a user named User1. Several users have full access to the mailbox of User1.

Some email messages sent to User1 appear to have been read and deleted before the user viewed them. When you search the audit log in the Microsoft Purview portal to identify who signed in to the mailbox of User1, the results are blank.

You need to ensure that you can view future sign-ins to the mailbox of User1.

Solution: You run the `Set-AuditConfig -Workload Exchange` command.

Does that meet the goal?

- A. No
- B. Yes

**Answer: A**

Explanation:

Comprehensive Detailed Explanation with References

The command `Set-AuditConfig -Workload Exchange` is related to configuring auditing for workloads but does not enable mailbox auditing.

To capture and view who is accessing User1's mailbox, mailbox auditing must be enabled at the mailbox level in Exchange Online.

Correct solution would be:

Set-Mailbox -Identity User1 -AuditEnabled \$true

Mailbox auditing is enabled by default for all mailboxes in Microsoft 365 now, but if it is disabled, enabling auditing at the mailbox level is required. Running Set-AuditConfig -Workload Exchange alone does not accomplish this.

Reference: Mailbox auditing in Microsoft 365

## NEW QUESTION # 192

### SIMULATION

Username and password

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and select the username below.

To enter your password, place your cursor in the Enter password box and select the password below.

Microsoft 365 Username:

admin@WWLx121586.onmicrosoft.com

Microsoft 365 Password: XXXXXXXXXX

If the Microsoft Edge browser or Microsoft 365 portal does not load successfully, select the Microsoft Edge browser icon from the task bar, type the URL "https://admin.microsoft.com", and press Enter.

The following information is for technical support purposes only:

Lab Instance: XXXXXXXXXX

Task 1

You plan to implement Endpoint data loss prevention (Endpoint DLP). You plan to create a policy that will restrict OneDrive.exe from accessing files that have the Highly Confidential sensitivity label.

You need to configure the Endpoint DLP settings so that onedrive.exe actions can be restricted by a DLP policy.

You do NOT need to create a DLP policy at this time.

### Answer:

Explanation:

To restrict onedrive.exe actions in Microsoft Purview, you first configure it as a restricted app group in Endpoint DLP settings and then add that group to a DLP policy in the Microsoft Purview portal. In the Endpoint DLP settings, navigate to Data loss prevention > Settings > Data loss prevention > Endpoint settings > Restricted apps and app groups. Create a new group called "Cloud Sync apps," select the Auto-quarantine option, and add onedrive.exe as the executable name for Windows.

Configure the restricted app group

Step 1: Sign in to the Microsoft Purview portal.

Step 2: Go to Data loss prevention > Settings (gear icon) > Data loss prevention > Endpoint settings.

Step 3: Expand Restricted apps and app groups.

Step 4: Under "Restricted app groups," select Add restricted app group.

Step 5: Enter a group name, such as Cloud Sync apps.

Step 6: Check the box for Auto-quarantine.

Step 7: In the "App name" field, add the executable name:

For Windows, enter onedrive.exe and click the + button.

## NEW QUESTION # 193

### HOTSPOT

You have a Microsoft 365 E5 subscription.

You need to implement a compliance solution that meets the following requirements:

# Captures clips of key security-related user activities, such as the exfiltration of sensitive company data.

# Integrates data loss prevention (DLP) capabilities with insider risk management.

What should you use for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

☐

### Answer:

Explanation:

☐

Explanation:

☐

Captures clips of key security-related user activities

This requirement refers to recording and surfacing evidence of risky user behavior (e.g., copying sensitive files to USB, uploading to

cloud storage, or exfiltrating data).

In Microsoft Purview Insider Risk Management, this is achieved through Forensic evidence, which allows capturing screenshots/clips of user activities on endpoints when a policy is triggered.

Ref: Microsoft Learn - Insider risk forensic evidence

Integrates DLP capabilities with insider risk management

Microsoft introduced Adaptive Protection as part of Purview Insider Risk.

Adaptive Protection uses insider risk signals and DLP together, dynamically adjusting DLP controls (block, restrict, monitor) based on the user's risk level.

This integration reduces false positives and ensures risky users are monitored more strictly while low-risk users are less impacted.

Ref: Microsoft Learn - Adaptive Protection in Microsoft Purview

Other options ruled out:

Adaptive scopes: Used for defining policy targeting groups dynamically, not capturing activities.

Classifiers/Trainable classifiers: Used for content classification, not exfiltration capture or DLP integration.

eDiscovery (Premium): For legal investigations, not insider risk + DLP integration.

Records management: Lifecycle retention, not related to insider risk.

## NEW QUESTION # 194

Hotspot Question

You have a Microsoft 365 ES subscription that uses Microsoft Exchange Online and Teams.

You need to ensure that when a user sends a message containing a cloud attachment, a retention label is applied to the cloud attachment by using an auto-labeling policy.

How should you configure the retention label to start the retention period, and to which locations should you apply the auto-labeling policy? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

### Answer:

Explanation:

Explanation:

Box 1: Labeled

Automatically apply a retention label to retain or delete content

Auto-apply labels to cloud attachments

You might need to use this option if you're required to capture and retain all copies of files in your tenant that are sent over communications by users, or files that are referenced in Copilot for Microsoft 365. You use this option in conjunction with retention policies for the communication services themselves; Exchange, Teams, Viva Engage, and Copilot for Microsoft 365.

Important

When you select a label to use for auto-applying retention labels for cloud attachments, ensure that the label retention setting Start the retention period based on is When items were labeled.

Box 2: Microsoft 365 Group mailboxes & sites only

When you select a label to use for auto-applying retention labels for cloud attachments, make sure the label retention setting Start the retention period based on is When items were labeled.

When you configure the locations for this option, you can select:

\* SharePoint classic and communication sites for shared files stored in SharePoint communication sites, team sites that aren't connected by Microsoft 365 groups, and classic sites.

\*-> Microsoft 365 Groups for shared files that are stored in team sites connected by Microsoft 365 groups.

\* OneDrive accounts for shared files stored in users' OneDrive.
