This makes these Automation and DevOps, Associate (JNCIA-DevOps) PDF Questions ideal for individuals looking to pass the Juniper JN0-224 Exam on their first try. You can evaluate the product with a free JN0-224 demo.

Juniper Automation and DevOps, Associate (JNCIA-DevOps) Sample Questions (Q52-Q57):

NEW QUESTION # 52

What is an example of correct XML syntax?

- A. `<Devices><hostname>vMX1</Devices></hostname>`
- B. `<Devices><hostname>vMX1</Devices>`
- C. `<Devices><hostname>vMX1</hostname></Device3>`
- D. `<Device3><hostname>vMX1</hostname></Devices>`

Answer: A

NEW QUESTION # 53

Your organization is developing an application to automate management of Junos network appliances. You want to use the existing PyEZ libraries to improve the development process. Which API would satisfy this requirement?

- A. JETAPI
- B. RPC API
- C. REST API
- D. XML API

Answer: C

NEW QUESTION # 54

Which two data structures are used in JSON? (Choose two.)

- A. dictionaries
- B. objects
- C. tuples
- D. arrays

Answer: B,D

Explanation:

In JSON (JavaScript Object Notation), the two primary data structures are:

Objects: These are collections of key-value pairs, where each key is a string, and the value can be a string, number, array, boolean, or another object. In Python, this structure is analogous to a dictionary.

Arrays: These are ordered lists of values, where each value can be of any data type, including another array or object. In Python, this structure is similar to a list.

Option A (tuples) and Option D (dictionaries) refer to Python-specific data structures and are not directly used in JSON.

Supporting Reference:

JSON Documentation and Tutorials: JSON objects and arrays are the standard data structures used in this format, as described in many tutorials and the official JSON documentation.

NEW QUESTION # 55

Which statement is correct about Ansible playbooks?

- A. A playbook is a configuration file that defines the Ansible related parameters
- B. A playbook contains one or more tasks written in XML
- C. A playbook can contain multiple tasks and execute multiple Python modules
- D. A playbook is a specific Python module that is executed on a host

Answer: C

NEW QUESTION # 56

You want to use a Python package or module.

In this scenario, which statement would accomplish this task?

- A. dir
- B. reap
- C. input
- **D. Import**

Answer: D

Explanation:

In Python, to use a package or module, you use the import statement. This statement allows you to load a module into your script so that you can use its functions, classes, and variables. For example, if you wanted to use the math module, you would write `import math`. This makes all the functions and constants in the math module available for use in your program.

Option A (reap), B (dir), and C (input) do not serve the purpose of importing modules. dir is used to list the attributes of an object, input is used to get user input, and reap is not a valid Python command related to importing modules.

Supporting Reference:

Python Documentation on Imports: The Python documentation provides clear guidelines on how to use the import statement to include modules in your Python scripts.

NEW QUESTION # 57

.....

Nobody wants to be stranded in the same position in his or her company and be a normal person forever. Maybe you want to get the JN0-224 certification, but daily work and long-time traffic make you busier to improve yourself. There is a piece of good news for you. Thanks to our JN0-224 Training Materials, you can learn for your JN0-224 certification anytime, everywhere. With our JN0-224 study materials, you will easily pass the JN0-224 examination and gain more confidence. Now let's see our products together.
