

100% Pass Quiz Analytics-Con-301 - Salesforce Certified Tableau Consultant Useful Latest Test Testking

P.S. Free 2026 Salesforce Analytics-Con-301 dumps are available on Google Drive shared by TestPassed:
<https://drive.google.com/open?id=1fifPSmAwc91fNIJGVWWRYSrCaNHbq-OK>

Our to-the-point and trustworthy Salesforce Certified Tableau Consultant Exam Questions in three formats for the Salesforce Analytics-Con-301 certification exam will surely assist you to qualify for Salesforce Analytics-Con-301 Certification. Do not underestimate the value of our Salesforce Analytics-Con-301 exam dumps because it is the make-or-break point of your career.

Through TestPassed you can get the latest Salesforce certification Analytics-Con-301 exam practice questions and answers. Please purchase it earlier, it can help you pass your first time to participate in the Salesforce Certification Analytics-Con-301 Exam. Currently, TestPassed uniquely has the latest Salesforce certification Analytics-Con-301 exam exam practice questions and answers.

>> Analytics-Con-301 Latest Test Testking <<

Salesforce Analytics-Con-301 Valid Study Notes, Valid Analytics-Con-301 Exam Testking

Our Analytics-Con-301 learning guide is very efficient tool in the world. As is known to us, in our modern world, everyone is looking for to do things faster, better, smarter, so it is no wonder that productivity hacks are incredibly popular. So we must be aware of the importance of the study tool. In order to promote the learning efficiency of our customers, our Analytics-Con-301 Training Materials were designed by a lot of experts from our company. Our Analytics-Con-301 study materials will be very useful for all people to improve their learning efficiency.

Salesforce Certified Tableau Consultant Sample Questions (Q19-Q24):

NEW QUESTION # 19

A client is working in Tableau Prep and has a field named OrderId that is compiled by country, year, and an order number as shown in the following table.

OrderId
CA-2017-152156
FR-2017-152157
US-2017-152158
CA-2017-152159

They want to transform the table to appear as shown.

Country	OrderNumber
CA	152156
FR	152157
US	152158
CA	152159

What should the consultant use to transform the table in the most efficient manner?

- A. A calculated field that uses the LEFT function
- B. A calculated field that uses the TRIM function
- C. The Aliases option
- **D. The Split option**

Answer: D

Explanation:

To transform the OrderId field in Tableau Prep, the Split option is the most efficient and straightforward method. Here's how you can apply it:

In Tableau Prep, drag your dataset into the flow.

Click on the OrderId field in the workspace to select it.

Look for the option in the toolbar that says "Split" and select it.

Choose "Automatic Split" if the delimiters (such as hyphens) are consistent; Tableau Prep should automatically detect the hyphen as the delimiter and split the OrderId into multiple new fields.

The dataset should now show new columns: one for the country code (CA, FR, US), one for the year (2017), and one for the order number (152156, 152157, etc.).

The Split option works effectively here because it automatically identifies and uses the hyphen as the delimiter to divide the original OrderId into the desired components without manual specification of conditions or writing any formulas.

References

This procedure is based on the standard functionalities provided in Tableau Prep for splitting a field into multiple columns based on a delimiter, as described in the Tableau Prep user guide.

NEW QUESTION # 20

A client collects information about a web browser customers use to access their website. They then visualize the breakdown of web traffic by browser version.

The data is stored in the format shown below in the related table, with a NULL BrowserID stored in the Site Visitor Table if an unknown browser version accesses their website.

Site Visitor Table		Browser Table	
VisitorID	BrowserID	BrowserID	Browser Version
1234	1	1	Chrome 85
1235	NULL	2	Chrome 86
1236	2	3	Safari 15.5
1237	3		

The client uses "Some Records Match" for the Referential Integrity setting because a match is not guaranteed.

The client wants to improve the performance of the dashboard while also getting an accurate count of site visitors.

Which modifications to the data tables and join should the consultant recommend?

- A. Add an "Unknown" option to the Browser Table, reference its BrowserID in the Site Visitor Table, and leave the Referential Integrity set to "Some Records Match."
- B. Continue to use NULL as the BrowserID in the Site Visitor Table and change the Referential Integrity to "All Records Match."
- **C. Add an "Unknown" option to the Browser Table, reference its BrowserID in the Site Visitor Table, and change the Referential Integrity to "All Records Match."**
- D. Continue to use NULL as the BrowserID in the Site Visitor Table and leave the Referential Integrity set to "Some Records Match."

Answer: C

Explanation:

To improve the performance of a Tableau dashboard while maintaining accurate counts, particularly when dealing with unknown or NULL BrowserIDs in the data tables, the following steps are recommended:

* Modify the Browser Table: Add a new row to the Browser Table labeled "Unknown," assigning it a unique BrowserID, e.g., 0 or 4.

* Update the Site Visitor Table: Replace all NULL BrowserID entries with the BrowserID assigned to the "Unknown" entry. This ensures every record in the Site Visitor Table has a valid BrowserID that corresponds to an entry in the Browser Table.

* Change Referential Integrity Setting: Change the Referential Integrity setting from "Some Records Match" to "All Records Match." This change assumes all records in the primary table have corresponding records in the secondary table, which improves query performance by allowing Tableau to make optimizations based on this assumption.

References:

Handling NULL Values: Replacing NULL values with a valid unknown option ensures that all data is included in the analysis, and integrity between tables is maintained, thereby optimizing the performance and accuracy of the dashboard.

NEW QUESTION # 21

A consultant is designing a dashboard that will be consumed on desktops, tablets, and phones. The consultant needs to implement a dashboard design that provides the best user experience across all the platforms.

Which approach should the consultant take to achieve these results?

- A. Build one dashboard and fix the size of the dashboard.
- B. Build one dashboard and set the size to Automatic.
- C. Build one dashboard for each type of device and fix the size of the layouts.
- **D. Build one dashboard that has desktop, tablet, and phone layouts, and fix the size of the layouts.**

Answer: D

Explanation:

For a consultant designing a dashboard to be consumed across multiple device types, the best approach is:

Multi-device Layout: Tableau provides the capability to design device-specific layouts within a single dashboard. This feature allows the dashboard to adapt its layout to best fit the screen size and orientation of desktops, tablets, and phones.

Fixed Size Layouts: By fixing the size of each layout, the consultant can ensure that the dashboard appears consistent and maintains the intended design elements and user experience across devices. Fixed sizes prevent components from resizing in ways that could disrupt the dashboard's readability or functionality.

Implementation: In Tableau, you can create these layouts by selecting 'Device Preview' and adding custom layouts for each device type. Here, you define the dimensions and the positioning of sheets and controls tailored to each device's typical viewing mode.

References

This approach leverages Tableau's device designer capabilities, which are specifically designed to optimize dashboards for multiple viewing environments, ensuring a seamless user experience regardless of the device used. This functionality is well documented in Tableau's official guides on creating and managing device-specific dashboards.

NEW QUESTION # 22

A stakeholder has multiple files saved (CSV/Tables) in a single location. A few files from the location are required for analysis. Data transformation (calculations) is required for the files before designing the visuals. The files have the following attributes:

- . All files have the same schema.
- . Multiple files have something in common among their file names.
- . Each file has a unique key column.

Which data transformation strategy should the consultant use to deliver the best optimized result?

- A. Use join option to combine/merge all the files together before doing the data transformation (calculations).
- B. Apply the data transformation (calculations) in each require file and do the wildcard union to combine /merge before designing the visuals.
- **C. Use wildcard Union option to combine/merge all the files together before doing the data transformation (calculations).**
- D. Apply the data transformation (calculations) in each require file and do the join to combine/merge before designing the visuals.

Answer: C

Explanation:

Moving calculations to the data layer and materializing them in the extract can significantly improve the performance of reports in Tableau. The calculation $ZN([Sales]) * (1 - ZN([Discount]))$ is a basic calculation that can be easily computed in advance and stored in the extract, speeding up future queries. This type of calculation is less complex than table calculations or LOD expressions, which are better suited for dynamic analysis and may not benefit as much from materialization^{1,2}.

References: The answer is based on the best practices for creating efficient calculations in Tableau, as described in Tableau's official documentation, which suggests using basic and aggregate calculations to improve performance¹. Additionally, the process of materializing calculations in extracts is detailed in Tableau's resources².

Given that all files share the same schema and have a common element in their file names, the wildcard union is an optimal approach to combine these files before performing any transformations. This strategy offers the following advantages:

Efficient Data Combination: Wildcard union allows multiple files with a common naming scheme to be combined into a single dataset in Tableau, streamlining the data preparation process.

Uniform Schema Handling: Since all files share the same schema, wildcard union ensures that the combined dataset maintains consistency in data structure, making further data manipulation more straightforward.

Pre-Transformation Combination: Combining the files before applying transformations is generally more efficient as it reduces redundancy in transformation logic across multiple files. This means transformations are written and processed once on the unified dataset, rather than repeatedly for each individual file.

References:

Wildcard Union in Tableau: This feature simplifies the process of combining multiple similar files into a single Tableau data source, ensuring a seamless and efficient approach to data integration and preparation.

NEW QUESTION # 23

An executive-level workbook leverages 37 of the 103 fields included in a data source. Performance for the workbook is noticeably slower than other workbooks on the same Tableau Server.

What should the consultant do to improve performance of this workbook while following best practice?

- A. Restrict users from accessing the workbook to reduce server load.
- B. Connect to the data source via a custom SQL query.

- C. Split some visualizations on the dashboard into many smaller visualizations on the same dashboard.
- D. Use filters, hide unused fields, and aggregate values.

Answer: D

Explanation:

To improve the performance of a Tableau workbook, it is best practice to streamline the data being used. This can be achieved by using filters to limit the data to only what is necessary for analysis, hiding fields that are not being used to reduce the complexity of the data model, and aggregating values to simplify the data and reduce the number of rows that need to be processed. These steps can help reduce the load on the server and improve the speed of the workbook.

References: The best practices for optimizing workbook performance in Tableau are well-documented in Tableau's official resources, including the Tableau Help Guide and the Designing Efficient Workbooks whitepaper, which provide detailed recommendations on how to streamline workbooks for better performance¹².

NEW QUESTION # 24

.....

TestPassed has launched the Analytics-Con-301 exam dumps with the collaboration of world-renowned professionals. Salesforce Analytics-Con-301 exam study material has three formats: Analytics-Con-301 PDF Questions, desktop Salesforce Analytics-Con-301 practice test software, and a Analytics-Con-301 web-based practice exam

Analytics-Con-301 Valid Study Notes: <https://www.testpassed.com/Analytics-Con-301-still-valid-exam.html>

After our worthy customers get a Analytics-Con-301 certificate, they now have more job opportunities, And you have right to free update of Analytics-Con-301 review dumps one-year, 20-30 hours' practices equal to Salesforce Analytics-Con-301 certification, We offer the valid & latest Analytics-Con-301 exam bootcamp and Analytics-Con-301 certification training files since 2008, Salesforce Analytics-Con-301 Latest Test Testking I guess this is also the candidates care most as well.

In highly charged situations, I do everything I can to stay focused, Analytics-Con-301 concentrating on staying calm and making sure I do the right things to get the shot, Now type commands followed by Enter.

Pass Guaranteed 2026 Accurate Salesforce Analytics-Con-301: Salesforce Certified Tableau Consultant Latest Test Testking

After our worthy customers get a Analytics-Con-301 certificate, they now have more job opportunities, And you have right to free update of Analytics-Con-301 review dumps one-year.

20-30 hours' practices equal to Salesforce Analytics-Con-301 certification, We offer the valid & latest Analytics-Con-301 exam bootcamp and Analytics-Con-301 certification training files since 2008.

I guess this is also the candidates care most as well.
