

# Why do you need Google Professional-Cloud-Security-Engineer Exam Dumps?

BTW, DOWNLOAD part of ExamsTorrent Professional-Cloud-Security-Engineer dumps from Cloud Storage:  
<https://drive.google.com/open?id=1skJZMbj7pLcfiWGxSVE7KHBUpZAJGKH>

To stay updated and competitive in the market you have to upgrade your skills and knowledge level. Fortunately, with the Google Cloud Certified - Professional Cloud Security Engineer Exam (Professional-Cloud-Security-Engineer) certification exam you can do this job easily and quickly. To do this you just need to pass the Google Cloud Certified - Professional Cloud Security Engineer Exam (Professional-Cloud-Security-Engineer) certification exam. The Google Cloud Certified - Professional Cloud Security Engineer Exam (Professional-Cloud-Security-Engineer) certification exam is the top-rated and career advancement Google Professional-Cloud-Security-Engineer certification in the market.

If you are sure you have learnt all the Professional-Cloud-Security-Engineer exam questions, you have every reason to believe it. ExamsTorrent's Professional-Cloud-Security-Engineer exam dumps have the best track record of awarding exam success and a number of candidates have already obtained their targeted Professional-Cloud-Security-Engineer Certification relying on them. They provide you the real exam scenario and by doing them repeatedly you enhance your confidence to Professional-Cloud-Security-Engineer questions answers without any hesitation.

## Google Professional-Cloud-Security-Engineer Test Simulator Fee & Certification Professional-Cloud-Security-Engineer Exam Dumps

What is the measure of competence? Of course, most companies will judge your level according to the number of qualifications you

have obtained. It may not be comprehensive, but passing the qualifying exam is a pretty straightforward way to hire an employer. Our Professional-Cloud-Security-Engineer exam practice questions on the market this recruitment phenomenon, tailored for the user the fast pass the examination method of study, make the need to get a good job have enough leverage to compete with other candidates. The quality of our Professional-Cloud-Security-Engineer learning guide is absolutely superior, which can be reflected from the annual high pass rate.

## Google Cloud Certified - Professional Cloud Security Engineer Exam Sample Questions (Q74-Q79):

### NEW QUESTION # 74

A customer implements Cloud Identity-Aware Proxy for their ERP system hosted on Compute Engine. Their security team wants to add a security layer so that the ERP systems only accept traffic from Cloud Identity- Aware Proxy.

What should the customer do to meet these requirements?

- A. Make sure that the ERP system can validate the x-forwarded-for headers in the HTTP requests.
- **B. Make sure that the ERP system can validate the JWT assertion in the HTTP requests.**
- C. Make sure that the ERP system can validate the identity headers in the HTTP requests.
- D. Make sure that the ERP system can validate the user's unique identifier headers in the HTTP requests.

**Answer: B**

Explanation:

Explanation/Reference:

### NEW QUESTION # 75

You are creating an internal App Engine application that needs to access a user's Google Drive on the user's behalf. Your company does not want to rely on the current user's credentials. It also wants to follow Google- recommended practices.

What should you do?

- A. Create a new Service account, and give all application users the role of Service Account User.
- B. Create a new Service account, and add all application users to a Google Group. Give this group the role of Service Account User.
- C. Use a dedicated G Suite Admin account, and authenticate the application's operations with these G Suite credentials.
- **D. Create a new service account, and grant it G Suite domain-wide delegation. Have the application use it to impersonate the user.**

**Answer: D**

Explanation:

To access a user's Google Drive on their behalf without relying on the user's credentials and following Google- recommended practices, you should use a service account with domain-wide delegation.

\* Create a Service Account:

\* Go to the Cloud Console, navigate to IAM & Admin > Service Accounts.

\* Click "Create Service Account" and provide necessary details.

\* Grant Domain-Wide Delegation:

\* Edit the service account to enable "G Suite Domain-wide Delegation".

\* Download the JSON key file.

\* Configure API Access in G Suite:

\* Go to the Google Admin Console.

\* Navigate to Security > API Controls > Domain-wide Delegation.

\* Add a new API client and use the client ID from the service account.

\* Authorize the necessary API scopes (e.g., <https://www.googleapis.com/auth/drive>).

\* Implement in Application:

\* Use the Google API Client Library for the desired language.

\* Load the service account credentials and perform user impersonation to access Google Drive.

Domain-wide Delegation of Authority

Using OAuth 2.0 for Server to Server Applications

### NEW QUESTION # 76

Your organization has had a few recent DDoS attacks. You need to authenticate responses to domain name lookups. Which Google Cloud service should you use?

- A. HTTP(S) Load Balancing
- **B. Cloud DNS with DNSSEC**
- C. Cloud NAT
- D. Google Cloud Armor

**Answer: B**

### NEW QUESTION # 77

Your organization has 3 TB of information in BigQuery and Cloud SQL. You need to develop a cost-effective, scalable, and secure strategy to anonymize the personally identifiable information (PII) that exists today. What should you do?

- A. Export all 3TB of data from BigQuery and Cloud SQL to Cloud Storage. Use Cloud Sensitive Data Protection to anonymize the exported data. Re-import the anonymized data back into BigQuery and Cloud SQL.
- **B. Scan your BigQuery and Cloud SQL data using the Cloud DLP data profiling feature. Use the data profiling results to create a de-identification strategy with either Cloud Sensitive Data Protection's de-identification templates or custom configurations.**
- C. Create a new BigQuery dataset and Cloud SQL instance. Copy a small subset of the data to these new locations. Use Cloud Data Loss Prevention API to scan this subset for PII. Based on the results, create a custom anonymization script and apply the script to the entire 3 TB dataset in the original locations.
- D. Inspect a representative sample of the data in BigQuery and Cloud SQL to identify PII. Based on this analysis, develop a custom script to anonymize the identified PII.

**Answer: B**

Explanation:

The problem requires a cost-effective, scalable, and secure strategy to anonymize 3 TB of PII in BigQuery and Cloud SQL. Cloud Sensitive Data Protection (Cloud DLP): Cloud DLP is Google Cloud's fully managed service designed for discovering, classifying, and de-identifying sensitive data, including PII, across various Google Cloud services and on-premises environments. It is specifically built for scale and security.

Extract Reference: "Sensitive Data Protection helps you discover, classify, and de-identify sensitive data." and "Sensitive Data Protection includes advanced de-identification techniques, such as tokenization, masking, and format-preserving encryption, to help you protect your sensitive data while preserving its utility for analysis." (Google Cloud Documentation: "Sensitive Data Protection overview" - <https://cloud.google.com/sensitive-data-protection/docs/overview>) Data Profiling: Cloud DLP's data profiling feature automatically scans your data (e.g., BigQuery tables, Cloud SQL databases) to identify where sensitive data resides and to understand its characteristics. This is crucial for developing an effective de-identification strategy.

Extract Reference: "Data profiles provide metrics and insights about your sensitive and high-risk data, helping you make informed decisions about data protection, access, and storage." and "When you configure Sensitive Data Protection to profile data in BigQuery, Cloud Storage, and Datastore, it automatically scans your data for sensitive information." (Google Cloud Documentation: "About data profiles" - <https://cloud.google.com/sensitive-data-protection/docs/concepts-data-profiles>)

De-identification Templates and Custom Configurations: After profiling identifies the PII, Cloud DLP offers various de-identification methods, which can be applied using pre-built templates or custom configurations.

This allows for flexible and targeted anonymization. For BigQuery specifically, DLP can integrate with remote functions for de-identification at query time, minimizing data movement.

Extract Reference: "De-identification techniques, like encryption, obfuscate raw sensitive identifiers in your data. These techniques let you preserve the utility of your data for joining or analytics, while reducing the risk of handling the data." and "You can use this tutorial to replace that pipeline with a SQL query for only re-identification or both de-identification and re-identification." (Google Cloud Documentation: "De-identify BigQuery data at query time | Sensitive Data Protection Documentation" - <https://cloud.google.com/sensitive-data-protection/docs/deidentify-bq-tutorial>) Let's evaluate the other options:

B). Copy small subset... create a custom anonymization script... apply the script to the entire 3 TB dataset:

Relying on a "custom anonymization script" for 3 TB of data is generally not scalable, cost-effective, or secure compared to a managed service like Cloud DLP. Custom scripts require significant development, testing, maintenance, and robust error handling for large datasets, and might introduce security vulnerabilities.

C). Export all 3TB of data... to Cloud Storage... anonymize... Re-import: While feasible, exporting and re-importing 3 TB of data is a very time-consuming and potentially costly process due to data transfer and storage operations. Cloud DLP can often process data in-place or integrate more efficiently, especially with BigQuery. This option might not be the most cost-effective or efficient.

D). Inspect a representative sample... develop a custom script: Similar to option B, this relies on a custom script, which is less ideal for scalability, cost-effectiveness, and security than a managed service like Cloud DLP for 3 TB of sensitive data. Sample inspection is a good initial step, but the subsequent custom script for anonymization is the weak point. Therefore, using Cloud DLP's data profiling to inform a de-identification strategy with its managed templates and configurations is the most appropriate, scalable, secure, and cost-effective approach for anonymizing PII in BigQuery and Cloud SQL.

#### NEW QUESTION # 78

You recently joined the networking team supporting your company's Google Cloud implementation. You are tasked with familiarizing yourself with the firewall rules configuration and providing recommendations based on your networking and Google Cloud experience. What product should you recommend to detect firewall rules that are overlapped by attributes from other firewall rules with higher or equal priority?

- A. Firewall Insights
- B. Security Command Center
- C. VPC Flow Logs
- D. Firewall Rules Logging

**Answer: A**

Explanation:

<https://cloud.google.com/network-intelligence-center/docs/firewall-insights/concepts/overview/#shadowed-firewall-rules> Firewall Insights analyzes your firewall rules to detect firewall rules that are shadowed by other rules. A shadowed rule is a firewall rule that has all of its relevant attributes, such as its IP address and port ranges, overlapped by attributes from one or more rules with higher or equal priority, called shadowing rules.

#### NEW QUESTION # 79

.....

Our Professional-Cloud-Security-Engineer exam guide has high quality of service. We provide 24-hour online service on the Professional-Cloud-Security-Engineer training engine. If you have any questions in the course of using the bank, you can contact us by email. We will provide you with excellent after-sales service with the utmost patience and attitude. And we will give you detailed solutions to any problems that arise during the course of using the Professional-Cloud-Security-Engineer learning braindumps. And our Professional-Cloud-Security-Engineer study materials welcome your supervision and criticism.

**Professional-Cloud-Security-Engineer Test Simulator Fee:** <https://www.examstorrent.com/Professional-Cloud-Security-Engineer-exam-dumps-torrent.html>

They are working for the whole day, week and year to reply the clients' question about our Professional-Cloud-Security-Engineer study materials and solve the clients' problem as quickly as possible, I believe that you have also contacted a lot of service personnel, but I still imagine you praise the staff of our Professional-Cloud-Security-Engineer study engine, A promotion with suitable job, a high salary and a happy life are the pursuit for all of us, which can be brought by Professional-Cloud-Security-Engineer Test Simulator Fee - Google Cloud Certified - Professional Cloud Security Engineer Exam exam certification.

This threatens to limit organizations' capability Professional-Cloud-Security-Engineer to grow and adapt, Leadership Skills—Dealing with Change, They are working for the whole day, week and year to reply the clients' question about our Professional-Cloud-Security-Engineer Study Materials and solve the clients' problem as quickly as possible.

### Free 1 year Google Professional-Cloud-Security-Engineer Dumps Updates

I believe that you have also contacted a lot of service personnel, but I still imagine you praise the staff of our Professional-Cloud-Security-Engineer study engine, A promotion with suitable job, a high salary and a happy Professional-Cloud-Security-Engineer Test Simulator Fee life are the pursuit for all of us, which can be brought by Google Cloud Certified - Professional Cloud Security Engineer Exam exam certification.
