## Updated EXIN CDCP Exam Introduction Are Leading Materials & Effective CDCP: Certified Data Centre Professional (CDCP)

Getting EXIN certification is a good way for you to access to IT field. But you may find that real test questions are difficult and professional and you have no time to prepare the CDCP valid test. So it is time that our latest dumps torrent and training materials help you get high passing score in the process of CDCP practice test at your first attempt.

## EXIN Certified Data Centre Professional (CDCP) Sample Questions (Q84-Q89):

### NEW QUESTION # 84

Which Class of Fires involves cooking appliances?

- A. Class K
- B. Class C
- C. Class B
- D. Class A

**Answer: A**

#### Explanation:

According to the EPI Data Centre Professional (CDCP®) Preparation Guide, Class K fires involve cooking appliances that use combustible cooking media such as vegetable or animal oils and fats (page 28). Class K fires require special extinguishing agents that can suppress the high-temperature flames and prevent re-ignition. Class K fires are different from Class B fires, which involve flammable liquids such as gasoline, oil, or paint.

### NEW QUESTION # 85

Which one of the following is a Natural Disaster?

- A. Human Error
- **B. Hurricanes**
- C. Grid Failure
- D. Blackouts

#### Answer: B

#### Explanation:

According to the CDCP® Preparation Guide, a natural disaster is a catastrophic event that is caused by natural forces and has a significant impact on human lives, property, and environment. Hurricanes are examples of natural disasters, as they are powerful storms that form over warm ocean waters and produce strong winds, heavy rain, storm surges, and flooding. Grid failure, blackouts, and human error are not natural disasters, but rather man-made or technological disasters that result from failures or errors in human systems or activities.

### NEW QUESTION # 86

What is the minimum clearance space required below water sprinkler heads and nozzles of gas-based fire suppression systems?

- **A. 46 cm/ 18 inches**
- B. 60 cm/ 24 inches
- C. 120 cm/ 47 inches
- D. 64 cm/ 25 inches

#### Answer: A

#### Explanation:

The minimum clearance space required below water sprinkler heads and nozzles of gas-based fire suppression systems is 46 cm/ 18 inches, according to the CDCP Preparation Guide1 and OSHA regulation 29 CFR

1910.159 © (10)2. This clearance space is necessary to ensure that the sprinkler spray or gas discharge can reach the fire and cover the protected area effectively. Any material or obstruction below this clearance space can interfere with the sprinkler or gas distribution and reduce the fire suppression performance. Therefore, building owners and managers should ensure that all storage and objects in the data centre are kept below this clearance space, and that the clearance space is maintained at all times.

### NEW QUESTION # 87

A fire extinguisher in the data centre is found which is classed as ABC.

Is this suitable?

- A. Only for fires not related to electrical power
- B. Yes
- **C. No**
- D. Depends on the brand

**Answer: C****Explanation:**

A fire extinguisher in the data centre that is classed as ABC is not suitable, because it contains dry chemical powder that can damage the ICT equipment and the data. ABC fire extinguishers are designed to fight Class A, B, and C fires, which are fueled by combustible materials, flammable liquids or gases, and electrical equipment, respectively. However, the dry chemical powder can leave a corrosive residue on the ICT equipment, which can cause short circuits, data loss, or malfunction. Moreover, the dry chemical powder can be difficult to clean, especially from the small spaces and crevices of the ICT equipment. Therefore, ABC fire extinguishers are not recommended for data centres, and should be replaced with more suitable fire extinguishers, such as clean agent fire extinguishers, which use gas or liquid that does not leave any residue or harm the ICT equipment.

**NEW QUESTION # 88**

Which type of Humidifier is composed of water-filled canister containing electrodes?

- A. Water Canister Humidifier
- B. Steam Canister Humidifier
- C. Ultrasonic Humidifier
- D. Infrared Humidifiers

**Answer: B****Explanation:**

A steam canister humidifier is a type of humidifier that uses electricity to heat water in a canister containing electrodes. The water conductivity and the water level determine the amount of current and steam production.

The steam canister humidifier is also known as an electrode boiler humidifier or an electrode steam humidifier123.
