In this way, you cannot miss a single Managing-Cloud-Security exam question without an answer. One more thing to give you an idea about the top features of WGU Managing Cloud Security (JY02) exam questions before purchasing, the Exam4Labs are offering a Free Managing-Cloud-Security Exam Questions demo download facility. This facility is being offered in all three WGU Managing Cloud Security (JY02) exam question formats. Just choose the right Managing-Cloud-Security exam questions format demo and download it quickly.

We can find that the Internet is getting closer and closer to our daily life and daily work. We can hardly leave the Internet now, we usually use computer or iPad to work and learn. Inevitably, we will feel too tired if we worked online too long. You can see our Managing-Cloud-Security exam materials have three version, including PDF version, APP version and soft version, the PDF version support printing. You can free download part of Managing-Cloud-Security simulation test questions and answers of Managing-Cloud-Security exam dumps and print it, using it when your eyes are tired. It is more convenient for you to look and read while protect our eye. If you print the Managing-Cloud-Security exam materials out, you are easy to carry it with you when you out, it is to say that will be a most right decision to choose the Managing-Cloud-Security, you will never regret it.

Pass Guaranteed Managing-Cloud-Security - Trustable Latest WGU Managing Cloud Security (JY02) Learning Materials

Based on the research results of the examination questions over the years, the experts give more detailed explanations of the contents of the frequently examined contents and difficult-to-understand contents, and made appropriate simplifications for infrequently examined contents. Managing-Cloud-Security test questions make it possible for students to focus on the important content which greatly shortens the students' learning time. With Managing-Cloud-Security Exam Torrent, you will no longer learn blindly but in a targeted way. Managing-Cloud-Security exam torrent will also help you count the type of the wrong question, so that you will be more targeted in the later exercises and help you achieve a real improvement. Managing-Cloud-Security exam guide will be the most professional and dedicated tutor you have ever met, you can download and use it with complete confidence.

WGU Managing Cloud Security (JY02) Sample Questions (Q139-Q144):

NEW QUESTION # 139

Which cloud model is owned and operated by a vendor and then sold, leased, or rented to someone else?

- A. Private

- B. Hybrid
- C. Community
- D. Public

Answer: D

Explanation:

The Public cloud model is owned and operated by a vendor and offered to customers through sale, lease, or rental arrangements. Managing Cloud principles describe public cloud providers as entities that deliver shared infrastructure, platforms, or applications to multiple customers over the internet.

In this model, the cloud service provider manages the infrastructure, maintenance, and security of the environment, while customers consume services on a pay-as-you-go or subscription basis. Public clouds offer scalability, flexibility, and cost efficiency but provide less control over underlying systems.

Private clouds are dedicated to a single organization, hybrid clouds combine multiple models, and community clouds serve specific groups. Therefore, the public cloud model best fits the description.

NEW QUESTION # 140

Which regulation restricts the government from forcing a cloud service provider to disclose customer data?

- A. ECPA
- B. GLBA
- C. SOX
- D. SCA

Answer: D

Explanation:

The Stored Communications Act (SCA) restricts the government's ability to force a cloud service provider to disclose customer data. Managing Cloud guidance explains that the SCA establishes legal protections for stored electronic communications and customer records held by service providers.

The act defines conditions under which government entities may request access to stored data, requiring appropriate legal processes such as warrants or court orders. This provides a level of privacy protection for cloud customers and limits unauthorized or excessive disclosure.

GLBA focuses on financial data, SOX addresses corporate governance, and ECPA is broader legislation that includes the SCA but does not directly define cloud disclosure limitations on its own. Therefore, SCA is the correct answer.

NEW QUESTION # 141

In which service model would the cloud service provider bear the greatest responsibility for security?

- A. Database as a Service (DBaaS)
- B. Platform as a Service (PaaS)
- C. Software as a Service (SaaS)
- D. Infrastructure as a Service (IaaS)

Answer: C

Explanation:

In the Software as a Service (SaaS) model, the cloud service provider bears the greatest responsibility for security. Managing Cloud documentation explains that in SaaS environments, the provider manages the application, operating system, middleware, infrastructure, and often many security controls.

Customers primarily focus on user access, data classification, and configuration of application-level settings, while the provider ensures platform availability, patching, vulnerability management, and infrastructure security. This shared responsibility model places the largest security burden on the provider in SaaS compared to other service models.

In PaaS and IaaS, customers assume increasing responsibility for securing operating systems, applications, and configurations. DBaaS still requires customer involvement in access control and data management.

Therefore, SaaS is the correct answer.

NEW QUESTION # 142

Which logical design model includes the foundations of a secure computing system, such as computing, networking, and storage?

- A. Infostructure
- **B. Infrastructure**
- C. Applistructure
- D. Metastructure

Answer: B

Explanation:

The Infrastructure logical design model includes the foundational components of a secure computing system, such as compute, networking, and storage. Managing Cloud principles explain that infrastructure represents the base layer upon which all other cloud services and security controls are built.

This layer includes physical and virtual servers, network connectivity, storage systems, and the virtualization technologies that enable resource sharing. Securing the infrastructure is critical because weaknesses at this level can compromise higher-level services and applications. Controls such as network segmentation, secure configurations, redundancy, and access restrictions are applied at the infrastructure level to protect workloads and data.

Infostructure focuses on data and information handling, applistructure relates to applications and services, and metastructure supports orchestration and management. Therefore, infrastructure correctly represents the foundational logical design model for secure cloud computing.

NEW QUESTION # 143

In most redundant array of independent disks (RAID) configurations, data is stored across different disks. Which method of storing data is described?

- A. Archiving
- **B. Striping**
- C. Mapping
- D. Crypto-shredding

Answer: B

Explanation:

The method described is striping, which is a technique used in RAID configurations to improve performance and distribute risk.

Striping involves splitting data into smaller segments and writing those segments across multiple disks simultaneously. For example, if a file is divided into four parts, each part is written to a separate disk in the RAID array.

This parallelism enhances input/output (I/O) performance because multiple drives can be accessed at once. It also provides resilience depending on the RAID level. While striping by itself (RAID 0) increases performance but not redundancy, when combined with mirroring or parity (e.g., RAID 5 or RAID 10), it offers both speed and fault tolerance.

The purpose of striping in the data management context is to optimize how data is stored, accessed, and protected. It is fundamentally different from archiving, mapping, or crypto-shredding, as those serve different objectives (long-term storage, logical placement, or secure deletion). Striping is central to high-performance storage systems and supports availability in mission-critical environments.
