If you have any questions about the FCP_FAZ_AN-7.6 Exam Dumps, just contact us, we will give you reply as soon as possible.

Fortinet FCP - FortiAnalyzer 7.6 Analyst Sample Questions (Q79-Q84):

NEW QUESTION # 79

Which two statements regarding the outbreak detection service are true? (Choose two.)

- A. An additional license is required.
- **B. It automatically downloads new event handlers and reports.**
- C. New alerts are received by email.
- **D. Outbreak alerts are available on the root ADOM only.**

Answer: B,D

NEW QUESTION # 80

Exhibit. Which statement about the event displayed is correct?

Event ID	Event Status	Event Type	Severity
Indygotattind.fndhere.org (3)	Mitigated	Web Filter	Low
Web request to suspicious destination from 10.0.30.0 network	Mitigated	Web Filter	Low

- **A. The security risk was blocked or dropped.**
- B. The security event risk is considered open.
- C. The risk source is isolated.
- D. An incident was created from this event.

Answer: A

Explanation:

In FortiOS and FortiAnalyzer logging systems, when an event has a status of "Mitigated" in the Event Status column, it typically indicates that the system took action to address the identified threat. In this case, the Web Filter blocked the web request to a suspicious destination, and the event status "Mitigated" confirms that the action was successfully implemented to neutralize or block the security risk.

NEW QUESTION # 81

Which two modules can be imported and exported between ADOMs on FortiAnalyzer? (Choose two.)

- **A. Charts**
- B. Reports
- **C. Datasets**
- D. Templates

Answer: A,C

Explanation:

Datasets and charts can be exported and imported between ADOMs, allowing reuse of custom queries and visual components across different administrative domains.

NEW QUESTION # 82

A playbook contains five tasks in total. An administrator runs the playbook and four out of five tasks finish successfully, but one task fails.

What will be the status of the playbook after it is run?

- A. Success
- **B. Failed**
- C. Upstream_failed
- D. Attention required

Answer: B

Explanation:

Exact Extract: Study Guide p.216: playbook jobs with one or more failed tasks are labeled Failed, even if some actions succeeded. Technical Deep Dive: The correct answer is C. FortiAnalyzer marks the overall playbook job as Failed when any task in the job fails. That does not mean every task failed; it means the job requires review because the workflow did not complete cleanly. Option A is not the status described in the FortiAnalyzer guide for this scenario. Option B is a task-dependency style outcome, not the overall job status tested here. Option D is wrong because success requires all required tasks to complete successfully.

NEW QUESTION # 83

Which two statements about local logs on FortiAnalyzer are true? (Choose two.)

- A. Event logs show system-wide information, whereas application logs are ADOM specific.
- B. You can view playbook logs for all ADOMs in the root ADOM.
- C. Event logs are available only in the root ADOM.
- D. They are not supported in FortiView.

Answer: A,B

Explanation:

FortiAnalyzer manages and stores various types of logs, including local logs, across different ADOMs (Administrative Domains). Each type of log serves specific purposes, with some logs being ADOM-specific and others providing system-wide information.

* Option A - Local Logs Not Supported in FortiView:

* Local logs are indeed supported in FortiView. FortiView provides visibility and analytics for different log types across the system, including local logs, allowing users to view and analyze data efficiently.

* Conclusion: Incorrect.

* Option B - Playbook Logs for All ADOMs in the Root ADOM:

* FortiAnalyzer allows centralized viewing of playbook logs across all ADOMs from the root ADOM. This feature provides an overarching view of playbook executions, facilitating easier monitoring and management for administrators.

* Conclusion: Correct.

* Option C - Event Logs vs. Application Logs:

* Event Logs provide information about system-wide events, such as login attempts, configuration changes, and other critical activities that impact the overall system. These logs apply across the FortiAnalyzer instance.

* Application Logs are more specific to individual ADOMs, capturing details that pertain to ADOM-specific applications and configurations.

* Conclusion: Correct.

* Option D - Event Logs Only in Root ADOM:

* Event logs are available across different ADOMs, not exclusively in the root ADOM. They capture system-wide events, but they can be accessed within specific ADOM contexts as needed.

* Conclusion: Incorrect.

Conclusion:

* Correct Answer: B. You can view playbook logs for all ADOMs in the root ADOM and C. Event logs show system-wide information, whereas application logs are ADOM specific.

* These answers correctly describe the characteristics and visibility of local logs within FortiAnalyzer.
