Snowflake SnowPro® Core Certification (COF-C03) Sample Questions (Q547-Q552):

NEW QUESTION # 547

Which Snowflake command can be used to unload the result of a query to a single file?

- A. Use COPY INTO <internal stage> followed by a put command to download the file.
- B. Use COPY INTO <external stage> with SINGLE = TRUE followed by a PUT command to download the file.
- C. Use COPY INTO <external stage> followed by a GET command to download the file.
- **D. Use COPY INTO <internal stage> with SINGLE = TRUE followed by a GET command to download the file.**

Answer: D

Explanation:

The Snowflake command to unload the result of a query to a single file is COPY INTO <internal stage> with SINGLE = TRUE followed by a GET command to download the file. This command unloads the query result into a single file in the specified internal stage

NEW QUESTION # 548

How does Snowflake define its approach to Discretionary Access Control (DAC)?

- A. An entity in which access can be granted
- B. Each object has an owner, who can in turn grant access to that object.
- C. A defined level of access to an object
- **D. Access privileges are assigned to roles, which are in turn assigned to users**

Answer: D

Explanation:

Snowflake implements Discretionary Access Control (DAC) by using a role-based access control model. In this model, access privileges are not directly assigned to individual objects or users but are encapsulated within roles. These roles are then assigned to users, effectively granting them the access privileges contained within the role. This approach allows for granular control over database access, making it easier to manage permissions in a scalable and flexible manner. References: Snowflake Documentation on Access Control

NEW QUESTION # 549

Which key access control concept does Snowflake describe as a defined level of access to an object?

- A. Session
- B. Grant
- **C. Privilege**
- D. Role

Answer: C

Explanation:

In Snowflake, the term "privilege" refers to a defined level of access to an object. Privileges are specific actions that roles can perform on securable objects in Snowflake, such as tables, views, warehouses, databases, and schemas. These privileges are granted to roles and can be further granted to users through their roles, forming the basis of Snowflake's access control framework. NEW QUESTION # 550

A Snowflake user is trying to load a 125 GB file using SnowSQL. The file continues to load for almost an entire day. What will happen at the 24 hour mark?

- **A. The file loading could be aborted without any portion of the file being committed.**
- B. The file's number of allowable hours to load can be programmatically controlled to load easily into Snowflake
- C. The file will stop loading and all data up to that point will be committed.
- D. The file will continue to load until all contents are loaded.

Answer: A

Explanation:

When attempting to load large files, such as a 125 GB file, into Snowflake using SnowSQL, the process might encounter limitations related to the maximum execution time for queries or data loading operations. If the loading process exceeds this time limit (typically around 24 hours), it could be aborted without committing any part of the file to the database. This behavior is designed to prevent indefinite resource consumption and to maintain system stability, emphasizing the need for optimizing data load operations, possibly through file segmentation or parallel loading strategies. NEW QUESTION # 551

Which table function will return the output of a previously-run command?

- A. QUERY_HISTORY
- B. RESULT_SCAN
- C. FLATTEN
- **D. TASK_HISTORY**

Answer: D
