

Palo Alto Networks SSE-Engineer덤프가고객님께드리 는약속Palo Alto Networks Security Service Edge Engineer

참고: ITDumpsKR에서 Google Drive로 공유하는 무료, 최신 SSE-Engineer 시험 문제집이 있습니다:
https://drive.google.com/open?id=1Go4AzZRNbj7CGbGsOVNcdCR6fS8wV_BJ

ITDumpsKR Palo Alto Networks인증SSE-Engineer시험덤프 구매전 구매사이트에서 무료샘플을 다운받아 PDF버전 덤프내용을 우선 체험해보실수 있습니다. 무료샘플을 보시면ITDumpsKR Palo Alto Networks인증SSE-Engineer시험대비 자료에 믿음이 갈것입니다.고객님의 이익을 보장해드리기 위하여ITDumpsKR는 시험불합격시 덤프비용전액환불을 무조건 약속합니다. ITDumpsKR의 도움으로 더욱 많은 분들이 멋진 IT전문가로 거듭나기를 바라는바입니다.

Palo Alto Networks SSE-Engineer 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> Prisma Access Administration and Operation: This section of the exam measures the skills of IT Operations Managers and focuses on managing Prisma Access using Panorama and Strata Cloud Manager. It tests knowledge of multitenancy, access control, configuration, and version management, and log reporting. Candidates should be familiar with releasing upgrades and leveraging SCM tools like Copilot. The section also evaluates the deployment of the Strata Logging Service and its integration with Panorama and SCM, log forwarding configurations, and best practice assessments to maintain security posture and compliance.
주제 2	<ul style="list-style-type: none"> Prisma Access Troubleshooting: This section of the exam measures the skills of Technical Support Engineers and covers the monitoring and troubleshooting of Prisma Access environments. It includes the use of Prisma Access Activity Insights, real-time alerting, and a Command Center for visibility. Candidates are expected to troubleshoot connectivity issues for mobile users, remote networks, service connections, and ZTNA connectors. It also focuses on resolving traffic enforcement problems including security policies, HIP enforcement, User-ID mismatches, and split tunneling performance issues.
주제 3	<ul style="list-style-type: none"> Prisma Access Services: This section of the exam measures the skills of Cloud Security Architects and covers advanced features within Prisma Access. Candidates are assessed on how to configure and implement enhancements like App Acceleration, traffic replication, IoT security, and privileged remote access. It also includes implementing SaaS security and setting up effective policies related to security, decryption, and QoS. The section further evaluates how to create and manage user-based policies using tools like the Cloud Identity Engine and User ID for proper identity mapping and authentication.
주제 4	<ul style="list-style-type: none"> Prisma Access Planning and Deployment: This section of the exam measures the skills of Network Security Engineers and covers foundational knowledge and deployment skills related to Prisma Access architecture. Candidates must understand key components such as security processing nodes, IP addressing, DNS, and compute locations. It evaluates routing mechanisms including routing preferences, backbone routing, and traffic steering. The section also focuses on deploying Prisma Access service infrastructure for mobile users using VPN clients or explicit proxy and configuring remote networks. Additional topics include enabling private application access using service connections, Colo-Connect, and ZTNA connectors, implementing identity authentication methods like SAML, Kerberos, and LDAP, and deploying Prisma Access Browser for secure user access.

최신 SSE-Engineer최신버전 인기 덤프자료 인증시험대비 덤프공부

ITDumpsKR 의 Palo Alto Networks인증 SSE-Engineer시험에 도전장을 던지셨나요? 현황에 만족하지 않고 열심히 하는 모습에 박수를 보내드립니다. Palo Alto Networks인증 SSE-Engineer시험을 학원등록하지 않고 많은 공부자료 필요 없이ITDumpsKR 에서 제공해드리는 Palo Alto Networks인증 SSE-Engineer덤프만으로도 가능합니다. 수많은 분들이 검증한Palo Alto Networks인증 SSE-Engineer덤프는 시장에서 가장 최신버전입니다.가격도 친근하구요.

최신 Network Security Administrator SSE-Engineer 무료샘플문제 (Q44-Q49):

질문 # 44

A large retailer has deployed all of its stores with the same IP address subnet. An engineer is onboarding these stores as Remote Networks in Prisma Access. While onboarding each store, the engineer selects the "Overlapping Subnets" checkbox.

Which Remote Network flow is supported after onboarding in this scenario?

- A. To the internet
- B. To private applications
- C. To mobile users
- D. To remote network

정답: B

설명:

When the "Overlapping Subnets" checkbox is selected during the Remote Network onboarding process in Prisma Access, the deployment enables Private Application access using Prisma Access for Users(ZTNA or Private Access). This feature is designed to handle scenarios where multiple sites use the same IP subnet by leveraging NAT (Network Address Translation) and segmentation to avoid conflicts.

Since overlapping subnets can create routing challenges for direct remote network-to-remote network communication, Prisma Access does not support Remote Network-to-Remote Network or Mobile User communication in this case. Private application access is supported as Prisma Access correctly routes requests based on application-layer intelligence rather than IP-based routing.

질문 # 45

After configuring domain-based split tunnel for zoom.us, how is expected behavior on the client machine confirmed?

- A. Enable debug level logs on GlobalProtect Application.
- B. Ping zoom.us from the CLI.
- C. Verify zoom.us is resolved by the tunnel assigned DNS server.
- D. Verify from the routing table.

정답: D

설명:

After configuring domain-based split tunneling for zoom.us, the expected behavior can be confirmed by checking the routing table on the client machine. If split tunneling is correctly configured, the traffic for zoom.us should be routed outside the GlobalProtect VPN tunnel, while other traffic follows the tunnel path.

Reviewing the routing table ensures that only the intended traffic is excluded from the tunnel, confirming that the split tunnel configuration is working as expected.

질문 # 46

A user connected to Prisma Access reports that traffic intermittently is denied after matching a Catch-All Deny rule at the bottom and bypassing HIP-based policies. Refreshing VPN connection restores the access.

What are two reasons for this behavior? (Choose two.)

- A. Firewall loses user mapping due to missed HIP report checks.
- B. User mapping is learned from sources other than gateway authentication.
- C. HIP-enforced policy is scheduled for certain hours of the day.
- D. 'Collect HIP data' needs to be enabled in the configuration.

정답: A,B

설명:

User mapping learned from sources other than gateway authentication can cause intermittent access issues if it conflicts with the expected user identity used in HIP-based policies. If the firewall is associating the user with an outdated or incorrect mapping, traffic may not match the intended security policies, leading to denials by the Catch-All Deny rule.

If the firewall loses user mapping due to missed HIP report checks, the user may temporarily lose access to policies that require a valid Host Information Profile (HIP) match. When the VPN connection is refreshed, the HIP check is re-initiated, restoring access until the issue repeats.

질문 # 47

Which statement is valid in relation to certificates used for GlobalProtect and pre-logout?

- A. Certificates must be deployed in the Machine Certificate Store.
- B. The GlobalProtect agent may be used to distribute pre-logout certificates.
- C. A public certificate authority (CA) must sign and validate all certificates used.
- D. The certificate used for pre-logout must include both Subject and Subject-Alt fields.

정답: A

설명:

For GlobalProtect with pre-logout, certificates must be installed in the Machine Certificate Store to ensure that authentication occurs before user login. This allows the GlobalProtect client to establish a VPN connection before the user logs in, enabling access to corporate resources such as domain controllers and authentication services. Using machine certificates ensures secure authentication and eliminates dependency on user credentials at the pre-logout stage.

질문 # 48

How can a network security team be granted full administrative access to a tenant's configuration while restricting access to other tenants by using role-based access control (RBAC) for Panorama Managed Prisma Access in a multitenant environment?

- A. Create a custom role with Device Group and Template privileges and assign it to the security team's user accounts.
- B. Set the administrative accounts for the security team to the "Superuser" role.
- C. Create an Access Domain and restrict access to only the Device Groups and Templates for the Target Tenant.
- D. Create a custom role enabling all privileges within the specific tenant's scope and assign it to the security team's user accounts.

정답: C

설명:

In a Panorama Managed Prisma Access multitenant environment, Access Domains provide granular role-based access control (RBAC). By defining an Access Domain, the network security team can be granted full administrative privileges for a specific tenant's configuration while ensuring they cannot access or modify other tenants. This method enforces proper segmentation and ensures compliance with multitenant security policies.

질문 # 49
