Reliable CCDAK Exam Vce | CCDAK Cert Exam

To pass the Confluent CCDAK certification exam, you need to master complicated subjects related to Confluent Certified Developer for Apache Kafka Certification Examination. Actual4Cert verified Confluent CCDAK pdf questions can help you prepare for this exam by covering every topic in the exam and giving you the opportunity to practice for the actual exam. Download Actual4Cert Confluent CCDAK PDF Questions today and get ready to demonstrate your expertise in solving complex Confluent real-life problems.

The CCDAK certification is an important credential for developers who want to demonstrate their expertise in working with Kafka. Confluent Certified Developer for Apache Kafka Certification Examination certification is offered by Confluent, which is the company that created Kafka. Confluent is a leading provider of data streaming platforms, and the CCDAK Certification is recognized as a valuable credential by many organizations in the industry. Confluent Certified Developer for Apache Kafka Certification Examination certification is designed to be accessible to developers of all levels of experience, from beginners to experts.

Confluent Certified Developer for Apache Kafka Certification Examination Sample Questions (Q143-Q148):

NEW QUESTION # 143

Which tool can you use to modify the replication factor of an existing topic?

- A. kafka-topics.sh
- B. kafka-reassign-partitions.sh
- C. kafka-recreate-topic.sh
- D. kafka-reassign-topics.sh

Answer: B

Explanation:

To change the replication factor of an existing topic, you must perform a partition reassignment, because the replication factor is not directly modifiable via kafka-topics.sh. The kafka-reassign-partitions.sh tool is the official command-line utility to handle partition reassignments, including changing the replication factor.

This tool allows you to generate a reassignment JSON specifying new replica assignments per partition and then apply it.

From official documentation:

"To change the replication factor, use the kafka-reassign-partitions tool to assign the partitions to more or fewer brokers." Neither kafka-topics.sh nor kafka-reassign-topics.sh exists for this purpose, and kafka-recreate-topic.sh is not an official Kafka tool.

Reference: Apache Kafka documentation > Operations > Changing Replication Factor

NEW QUESTION # 144

How often is log compaction evaluated?

- A. Every time a message is flushed to disk
- B. Every time a new partition is created
- C. Every time a segment is closed
- D. Every time a message is sent to Kafka

Answer: C

Explanation:

Log compaction is evaluated every time a segment is closed. It will be triggered if enough data is "dirty" (see dirty ratio config)

NEW QUESTION # 145

In Avro, adding an element to an enum without a default is a ___ schema evolution

- A. backward
- B. breaking
- C. full
- D. forward

Answer: B

Explanation:

Since Confluent 5.4.0, Avro 1.9.1 is used. Since default value was added to enum complex type, the schema resolution changed from:

(<1.9.1) if both are enums: ** if the writer's symbol is not present in the reader's enum, then an error is signalled. **(>=1.9.1) if both are enums:

if the writer's symbol is not present in the reader's enum and the reader has a default value, then that value is used, otherwise an error is signalled.

NEW QUESTION # 146

Which of the following is not an Avro primitive type?

- A. long
- B. date
- C. null
- D. int
- E. string

Answer: B

Explanation:

date is a logical type

NEW QUESTION # 147

To prevent network-induced duplicates when producing to Kafka, I should use

- A. max.in.flight.requests.per.connection=1
- B. retries=200000
- C. enable.idempotence=true
- D. batch.size=1

Answer: C

Explanation:

Producer idempotence helps prevent the network introduced duplicates. More details here<https://cwiki.apache.org/confluence/display/KAFKA/Idempotent+Producer>

NEW QUESTION # 148
