

CCDAK Latest Test Camp - CCDAK Valid Exam Questions

Answer: E

Explanation: One of the benefits of using Apache Kafka for real-time data streaming is its fault-tolerance and high availability. Kafka is designed to provide durability, fault tolerance, and high availability of data streams. It can handle large volumes of data and offers high scalability and throughput. Kafka also allows for centralized message storage and processing, enabling real-time processing of data from multiple sources.

Question: 356

Which of the following is NOT a valid deployment option for Kafka?

- A. On-premises deployment
- B. Cloud deployment (e.g., AWS, Azure)
- C. Containerized deployment (e.g., Docker)
- D. Mobile deployment (e.g., Android, iOS)

Answer: D

Explanation: Mobile deployment (e.g., Android, iOS) is not a valid deployment option for Kafka. Kafka is typically deployed in server or cloud environments to handle high-throughput and real-time data streaming. It is commonly deployed on servers in on-premises data centers or in the cloud, such as AWS (Amazon Web Services) or Azure. Kafka can also be containerized using technologies like Docker and deployed in container orchestration platforms like Kubernetes. However, deploying Kafka on mobile platforms like Android or iOS is not a typical use case. Kafka is designed for server-side data processing and messaging, and it is not optimized for mobile devices.

Confluent Certified Developer for Apache Kafka Certification Examination 100% pass dumps & CCDAK latest valid exam torrent

Our CCDAK learning question can provide you with a comprehensive service beyond your imagination. CCDAK exam guide has a first-class service team to provide you with 24-hour efficient online services. Our team includes industry experts & professional personnel and after-sales service personnel, etc. Industry experts hired by CCDAK Exam Guide helps you to formulate a perfect

learning system, and to predict the direction of the exam, and make your learning easy and efficient. Our staff can help you solve the problems that CCDAK test prep has in the process of installation and download.

Confluent Certified Developer for Apache Kafka Certification Examination Sample Questions (Q154-Q159):

NEW QUESTION # 154

Which of the following statements are true regarding the number of partitions of a topic?

- A. We can add partitions in a topic by adding a broker to the cluster
- B. We can remove partitions in a topic using the `kafka-topics.sh` command
- C. The number of partitions in a topic cannot be altered
- **D. We can add partitions in a topic using the `kafka-topics.sh` command**
- E. We can remove partitions in a topic by removing a broker

Answer: D

Explanation:

We can only add partitions to an existing topic, and it must be done using the `kafka-topics.sh` command

NEW QUESTION # 155

Which partition assignment minimizes partition movements between two assignments?

- A. RoundRobinAssignor
- B. RangeAssignor
- **C. StickyAssignor**
- D. PartitionAssignor

Answer: C

NEW QUESTION # 156

A stream processing application is consuming from a topic that has five partitions. You run three instances of your application, each with `num.streams.threads` set to five.

You need to identify the amount of total stream tasks that will be created and the amount that will be actively consuming messages from the input topic.

Which option is correct?

- A. 5 created, 1 actively consuming
- B. 15 created, 5 actively consuming
- C. 5 created, 5 actively consuming
- **D. 15 created, 15 actively consuming**

Answer: D

NEW QUESTION # 157

You have a Kafka consumer in production actively reading from a critical topic.

You need to update the offset of your consumer to start reading from the beginning of the topic.

Which action should you take?

- A. Temporarily configure the topic's `retention.ms` parameter to 0 to empty the topic.
- B. Update the consumer configuration by setting `auto.offset.reset=earliest`.
- **C. Update the consumer group's offset to the earliest position using the `kafka-consumer-groups` CLI tool.**
- D. Start a new consumer application with the same consumer group id.

Answer: C

Explanation:

To reset offsets for an existing consumer group, you must use the `kafka-consumer-groups.sh` tool with the `--reset-offsets` and `--to-earliest` flags.

From Kafka Consumer Group Tool Documentation:

"You can use the `kafka-consumer-groups` tool to reset offsets for a consumer group. This is required if the consumer has already committed offsets."

- * Setting `auto.offset.reset=earliest` only works if no committed offset exists.
- * Starting a new consumer with the same group won't reset offsets.
- * Retention settings don't affect committed offsets.

Reference: Kafka Consumer Group CLI Tool

NEW QUESTION # 158

To transform data from a Kafka topic to another one, I should use

- **A. Kafka Streams**
- B. Consumer + Producer
- C. Kafka Connect Source
- D. Kafka Connect Sink

Answer: A

Explanation:

Kafka Streams is a library for building streaming applications, specifically applications that transform input Kafka topics into output Kafka topics

NEW QUESTION # 159

.....

For our PDF version of our CCDAK practice materials has the advantage of printable so that you can print all the materials in CCDAK study engine to paper. Then you can sketch on the paper and mark the focus with different colored pens. This will be helpful for you to review the content of the materials. If you are busy with work and can't afford a lot of spare time to review, you can choose the other two versions of our CCDAK Exam Questions: Software and APP online versions.
